

TRS3243

ZHCSR61C - JUNE 2007 - REVISED OCTOBER 2022

具有 ±15kV ESD (HBM) 保护功能的 TRS3243 3V 至 5.5V 多通道 RS-232 线路驱动器和接收器

1 特性

- 由 3V 至 5.5V V_{CC} 电源供电
- 用于 IBM® PC/AT™ 串行端口的 单芯片和单电源接口
- 使用人体放电模型 (HBM) 时, RS-232 总线引脚 ESD 保护为 ±15kV
- 符合或超出 TIA/EIA-232-F 和 ITU V.28 标准的要求
- 三个驱动器和五个接收器
- 运行速率高达 250kbps
- 低活动电流:300μA(典型值) • 低待机电流: 1 μ A (典型值)
- 外部电容器: 4 × 0.1 μ F
- 接受 5V 逻辑输入及 3.3V 电源
- 始终有效同相接收器 输出 (ROUT2B)
- 工作温度
 - TRS3243C: 0°C 至 70°C - TRS3243I: -40°C 至 85°C
- 串行鼠标驱动能力
- 自动断电功能,在没有检测到 有效 RS-232 信号时 禁用驱动器输出

2 应用

- 电池供电型系统
- 平板电脑
- 笔记本电脑
- 便携式计算机
- 手持设备

3 说明

TRS3243 器件包含三个线路驱动器和五个线路接收 器,非常适合用于 DE-9 DTE 接口。引脚对引脚(串 行端口连接引脚,包括 GND) ±15kV ESD (HBM) 保 护。灵活的电源功能可自动省电。特殊输出 ROUT2B 和 INVALID 始终启用,以检查振铃指示灯和有效的 RS232 输入。

⁽¹⁾ Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

8 Detailed Description

8.1 Overview

The TRS3243 device consists of three line drivers, five line receivers, and a dual charge-pump circuit with ±15-kV ESD (HBM) protection pin-to-pin (serial-port connection pins, including GND). The TRS3243 device meets the requirements of TIA/EIA-232-F and provides the electrical interface between an asynchronous communication controller and the serial-port connector. This combination of drivers and receivers matches what is needed for the typical serial port used in an IBM PC, AT, or compatible device. The charge pump and four small external capacitors allow operation from one 3-V to 5.5-V supply. In addition, the device includes an always-active noninverting output (ROUT2B), which allows applications using the ring indicator to transmit data while the device is powered down. Flexible control options for power management are available when the serial port is inactive. The automatic power-down feature functions when FORCEON is low and FORCEOFF is high. During this mode of operation, if the device does not sense a valid RS-232 signal, the driver outputs are disabled. If FORCEOFF is set low, both drivers and receivers (except ROUT2B) are shut off, and the supply current is reduced to 1 µA. Disconnecting the serial port or turning off the peripheral drivers causes the automatic power-down condition to occur. Automatic power down can be disabled when FORCEON and FORCEOFF are high and must be done when driving a serial mouse. With automatic power down enabled, the device is activated automatically when a valid signal is applied to any receiver input. The INVALID output is used to notify the user if an RS-232 signal is present at any receiver input. INVALID is high (valid data) if any receiver input voltage is greater than 2.7 V, is less than - 2.7 V, or has been between - 0.3 V and 0.3 V for less than 30 μs. INVALID is low (invalid data) if all receiver input voltages are between - 0.3 V and 0.3 V for more than 30 μs.

8.3 Feature Description

8.3.1 Automatic Power Down

Automatic power down can be used to automatically save power when the receivers are unconnected or when they are connected to a powered down remote RS232 port. FORCEON being high overrides automatic power down and the drivers are active. FORCEOFF being low overrides FORCEON and powers down all outputs except for ROUT2B and INVALID.

8.3.2 Charge Pump

The charge pump increases, inverts, and regulates voltage at V+ and V - pins. The charge pump requires four external capacitors.

8.3.3 RS232 Driver

Three drivers interface standard logic level to RS232 levels. All DIN inputs must be valid high or low.

8.3.4 RS232 Receiver

Five receivers interface RS232 levels to standard logic levels. An open input results in a high output on ROUT. Each RIN input includes an internal standard RS232 load.

8.3.5 ROUT2B Receiver

ROUT2B is an always-active, noninverting output of RIN2 input, which allows applications using the ring indicator to transmit data while the device is powered down.

8.3.6 Invalid Input Detection

The INVALID output goes active low when all RIN inputs are unpowered. The INVALID output goes inactive high when any RIN input is connected to an active RS232 voltage level.

9 Application and Implementation

备注

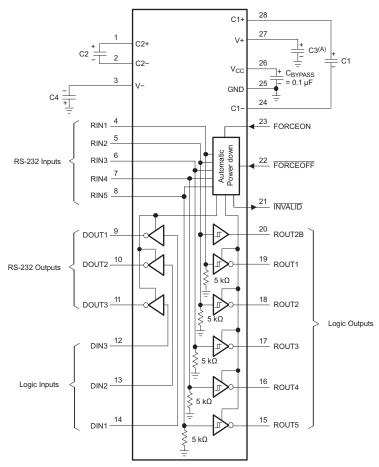

以下应用部分中的信息不属于 TI 器件规格的范围, TI 不担保其准确性和完整性。TI 的客户应负责确定器件是否适用于其应用。客户应验证并测试其设计,以确保系统功能。

9.1 Application Information

The TRS3243 device is designed to convert single-ended signals into RS232-compatible signals, and vice-versa.

This device can be used in any application where RS232 line driver or receiver is required. One benefit of this device is its ESD protection, which helps protect other components on the board when the RS232 lines are tied to a physical connector. The device also features an automatic power-down circuit.

9.2 Typical Application

- A. C3 can be connected to V_{CC} or GND.
- B. Resistor values shown are nominal.
- C. Nonpolarized ceramic capacitors are acceptable. If polarized tantalum or electrolytic capacitors are used, they must be connected as shown.

图 9-1. Typical Operating Circuit and Capacitor Values

9.2.1 Design Requirements

- V_{CC} minimum is 3 V and maximum is 5.5 V
- Maximum recommended bit rate is 250 kbps

Submit Document Feedback

表 9-	 V_{CC} 	versus	Capacitor	Values
------	------------------------------------	--------	-----------	---------------

V _{cc}	C1	C2, C3, C4				
3.3 V ± 0.3 V	0.1 μF	0.1 μF				
5 V ± 0.5 V	0.047 µF	0.33 μF				
3 V to 5.5 V	0.1 μF	0.47 μF				

9.2.2 Detailed Design Procedure

It is recommended to add capacitors as shown in \(\begin{aligned} \text{9-1}. \end{aligned} \)

All DIN, FORCEOFF and FORCEON inputs must be connected to valid low or high logic levels.

Select capacitor values based on V_{CC} level for best performance.

9.2.3 Application Curve

 $V_{CC} = 3.3 V$

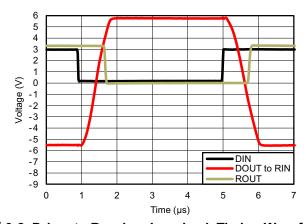

图 9-2. Driver to Receiver Loopback Timing Waveform

9.3 Power Supply Recommendations

V_{CC} must be between 3 V and 5.5 V. Charge pump capacitors must be chosen using ₹ 9-1.

9.4 Layout

9.4.1 Layout Guidelines

Keep the external capacitor traces short. This is more important on C1 and C2 nodes that have the fastest rise and fall times.

№ 9-3 shows only critical layout sections. Input and output traces will vary in shape and size depending on the customer application. FORCEON and FORCEOFF must be pulled up to VCC or GND through a pullup resistor, depending on which configuration is desired upon powerup.

10.3 静电放电警告

静电放电 (ESD) 会损坏这个集成电路。德州仪器 (TI) 建议通过适当的预防措施处理所有集成电路。如果不遵守正确的处理和安装程序,可能会损坏集成电路。

ESD 的损坏小至导致微小的性能降级,大至整个器件故障。精密的集成电路可能更容易受到损坏,这是因为非常细微的参数更改都可能会导致器件与其发布的规格不相符。

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

- (3) MSL, Peak Temp. The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead finish/Ball material Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
