

## **SN65LVPE502CP Errata**

The SN65LVPE502CP redriver is a dual channel, single lane USB 3.0 redriver and signal conditioner supporting data rates of 5.0Gbps. This report provides information on the errata found on the SN65LVPE502CP device. The errata includes a false detect with VBUS powered devices and termination remaining enabled in certain situations.

**Problem:**                    *False Detect*

*Some VBUS powered devices create noise on plug-in and cause the SN65LVPE502CP to falsely detect the device and enable termination early. After termination is enabled, the host begins polling before the device is ready. Polling will timeout and the host will enter compliance mode.*

**Solution:**                    This issue is fixed on the SN65LVPE502A device. [Figure 1](#) shows a successful connection after a glitch is observed when the VBUS powered device is attached.

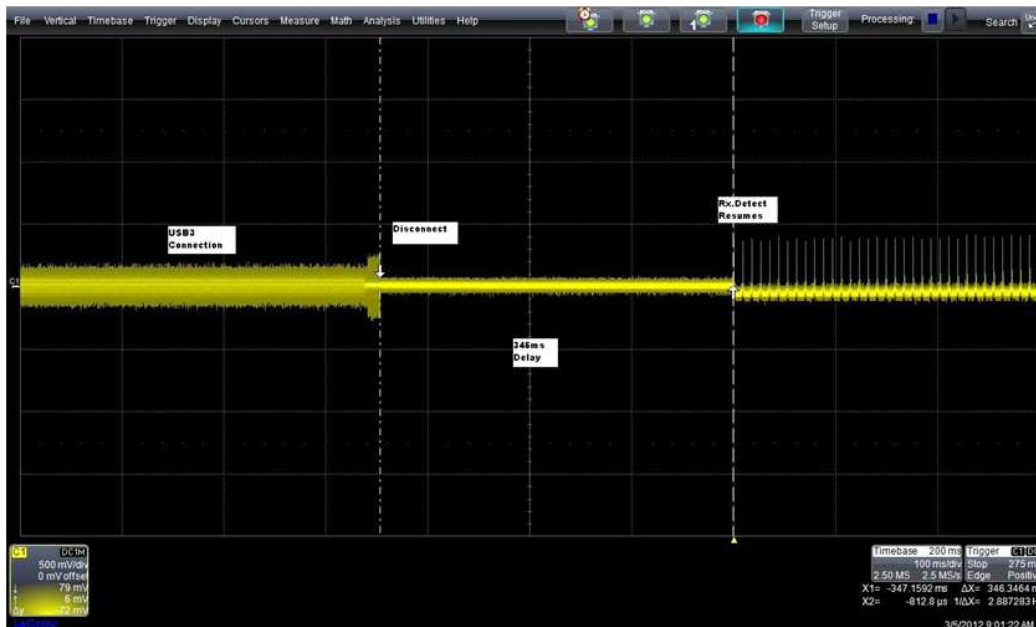

**Figure 1. Connection of VBUS Powered Device**

**Problem:** *Termination Remains Enabled*

*In certain conditions the termination remains enabled after a device is disconnected from the SN65LVPE502CP. This issue is host software driver dependant. If host issues a warm reset within ~300 ms of device disconnect the termination will remain enabled. No functional issues are observed, but the power consumption is increased while no devices are connected.*

**Solution:** This issue is no longer driver dependant and is fixed in the SN65LVPE502A. A successful disconnect may be observed in [Figure 2](#).

**Figure 2. SN65LVPE502A Successful Disconnect**

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
