

250mA 双路输出有源矩阵有机发光二极管 (AMOLED) 显示屏电源

查询样品: [TPS65137AS](#)

特性

- **2.5V 至 4.8V** 输入电压范围
- **0.8%** 输出电压精度 $V_{\text{正向}}$
- 出色的线路瞬态稳压
- **250mA** 输出电流
- 固定 **4.6V $V_{\text{正向}}$** 输出电压
- 数字可编程 $V_{\text{负向}}$, **-2.2V 至 -5.2V**
- $V_{\text{负向}}$ 的缺省值为 **-4.9V**
- 短路保护
- 热关断
- **3mm × 3mm 10** 引脚四方扁平无引线 (QFN) 封装

说明

TPS65137AS 被设计用于驱动需要正负电压电源轨的 AMOLED 显示屏（有源矩阵有机发光二极管）。此器件集成了一个具有低压降 (LDO) 后置稳压器的升压转换器和一个适合于电池供电类产品的反相降压-升压转换器。数字控制引脚 (CTRL) 允许用数字步进设定负输出电压。TPS65137AS 使用一个可实现出色线路和负载稳压的全新技术。需要使用此技术来避免手机发送阶段产生的输入电压干扰对 AMOLED 显示屏造成的影响。

应用范围

- 有源矩阵 **OLED**

典型应用

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

ORDERING INFORMATION⁽¹⁾ ⁽²⁾

T _A	PACKAGE ⁽²⁾	ORDERABLE PART NUMBER	TOP-SIDE MARKING
–40°C to 85°C	10-Pin 3x3 QFN	TPS65137ASDSCR	PPGC

(1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI web site at www.ti.com.

(2) Package drawings, thermal data, and symbolization are available at www.ti.com/packaging.

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		VALUE		UNIT
		MIN	MAX	
Pin Voltage ⁽²⁾	PVIN, SWP, OUTP, CTRL, VL, CB		5.5	V
	OUTN		–6.5	V
	SWN	–6.5	5.5	V
	CT		3.6	V
ESD rating	HBM		2	kV
	MM		200	V
	CDM		500	V
T _J	Operating junction temperature range	–40	50	°C
T _A	Operating ambient temperature range	–40	85	°C
T _{stg}	Storage temperature range	–65	150	°C

(1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute–maximum–rated conditions for extended periods may affect device reliability.

(2) With respect to GND pin.

DETAILED DESCRIPTION

The TPS65137AS consists of a boost converter using an LDO as post regulator and an inverting buck-boost converter. The positive output is fixed at 4.6V. The negative output is programmable by a digital interface in the range of –2.2V to –5.2V, the default is –4.9V. The transition time of the negative output is adjustable by the CT pin capacitor.

SOFT START and START-UP SEQUENCE

The device has a soft start to limit the in-rush current. When the device is enabled by the CTRL pin going HIGH, the boost converter starts with a reduced switch current limit. 8ms after CTRL going HIGH, the buck-boost converter starts with the default value of –4.9V. The typical start-up sequence is shown in Figure 8.

Figure 8. Start-up Sequence

SHORT CIRCUIT PROTECTION

The device is protected against short circuits of the outputs to ground and short circuit of the outputs to each other. During normal operation, an error condition is detected if V_{POS} falls below 3.7V for more than 3ms or V_{NEG} gets above 420mV above the programmed value for more than 3ms. In either case, the device goes into shutdown and this state is latched. The input and the outputs are disconnected. To resume normal operation, V_{IN} has to cycle below UVLO or CTRL has to toggle LOW and HIGH.

During start up, an error condition is detected in the following cases:

- V_{POS} is not in regulation 10ms after CTRL goes HIGH.
- V_{NEG} is higher than threshold level 10ms after CTRL goes HIGH.
- V_{NEG} is not in regulation 20ms after CTRL goes HIGH.

In the above cases, the device goes into shutdown and this state is latched. The input and the outputs are disconnected. To resume normal operation, V_{IN} has to cycle below UVLO or CTRL has to toggle LOW and HIGH.

ENABLE (CTRL PIN)

The CTRL pin serves two functions. One is to enable and disable the device the other is the output voltage programming of the device. If the digital interface is not required the CTRL pin can be used as a standard enable pin for the device and the device will come up with its default value on V_{NEG} of –4.9V. When CTRL is pulled high, the device is enabled. The device is shut down with CTRL low.

DIGITAL INTERFACE (CTRL)

The digital interface allows programming the negative output voltage V_{NEG} in digital steps. If the digital output voltage setting is not required then the CTRL pin can also be used as a standard enable pin.

The digital output voltage programming of V_{NEG} is implemented by a simple digital interface with the timing shown in [Figure 9](#).

Figure 9. Digital Interface Using CTRL

Once CTRL is pulled high the device will come up with its default voltage of $-4.9V$. The device has a 6-bit DAC implemented with the corresponding output voltages as given in the table below. The interface counts now the rising edges applied to the CTRL pin once the device is enabled. For the example above, V_{NEG} is programmed to $-5.0V$ since 3 rising edges are detected. Other output voltages can be programmed according [Table 2](#).

Table 2. Programming Table for V_{NEG}

BIT/RISING EDGES	V_{NEG}	DAC VALUE	BIT/RISING EDGES	V_{NEG}	DAC VALUE
0/ no pulse	$-4.9 V$	00000	16	$-3.7 V$	10000
1	$-5.2 V$	00001	17	$-3.6 V$	10001
2	$-5.1 V$	00010	18	$-3.5 V$	10010
3	$-5.0 V$	00011	19	$-3.4 V$	10011
4	$-4.9 V$	00100	20	$-3.3 V$	10100
5	$-4.8 V$	00101	21	$-3.2 V$	10101
6	$-4.7 V$	00110	22	$-3.1 V$	10110
7	$-4.6 V$	00111	23	$-3.0 V$	10111
8	$-4.5 V$	01000	24	$-2.9 V$	11000
9	$-4.4 V$	01001	25	$-2.8 V$	11001
10	$-4.3 V$	01010	26	$-2.7 V$	11010
11	$-4.2 V$	01011	27	$-2.6 V$	11011
12	$-4.1 V$	01100	28	$-2.5 V$	11100
13	$-4.0 V$	01101	29	$-2.4 V$	11101
14	$-3.9 V$	01110	30	$-2.3 V$	11110
15	$-3.8 V$	01111	31	$-2.2 V$	11111

SETTING TRANSITION TIME t_{set} for V_{NEG} (C_T)

The device allows setting the transition time t_{set} using an external capacitor connected to pin CT. The transition time is the time period required to move V_{NEG} from one voltage level to the next programmed voltage level. The capacitor connected to pin CT does not influence the soft start time t_{ss} of the V_{NEG} default value. When the CT pin is left open then the shortest possible transition time is programmed. When connecting a capacitor to the CT pin then the transition time is given by an R-C time constant. This is given by the output impedance of the CT pin typically 325k Ω and the external capacitance. Within one τ the output voltage V_{NEG} has reached 70% of its programmed value. An example is given when using 100nF for C_T .

$$\tau \approx t_{set70\%} = 325 \text{ k}\Omega \times C_T = 325 \text{ k}\Omega \times 100 \text{ nF} = 32.5 \text{ ms}$$

The output voltage is almost at its programmed value after 3τ .

PCB LAYOUT

Figure 10 and Figure 11 show an example of a PCB layout design.

1. Place the input capacitor on VIN and the output capacitor on OUTN as close as possible to the device. Use short and wide traces to connect the input capacitor to VIN and the output capacitor to OUTN.
2. Place the output capacitor on OUTP and the capacitor on CB as close as possible to the device. Use short and wide traces to connect the output capacitor to OUTP.
3. Connect the ground of the CT capacitor to the GND pin, pin 6, directly.
4. Connect the input ground and the output ground on the same board layer, not through vias.

PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package Pins	Package qty Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
TPS65137ASDSCR	Active	Production	WSON (DSC) 10	3000 LARGE T&R	Yes	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	PPGC
TPS65137ASDSCR.B	Active	Production	WSON (DSC) 10	3000 LARGE T&R	Yes	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	PPGC

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
