

CC2640R2L SimpleLink™ 低功耗 *Bluetooth*® 5.1 无线 MCU

1 特性

- 微控制器
 - 功能强大的 Arm® Cortex®-M3
 - EEMBC CoreMark® 评分：142
 - 高达 48MHz 的时钟速度
 - 275KB 非易失性存储器，包括 128KB 系统内可编程闪存
 - 高达 28KB 系统 SRAM，其中 20KB 为超低泄漏 SRAM
 - 8KB SRAM 作为缓存或系统 RAM 用途
 - 2 引脚 JTAG 和 JTAG 调试
 - 支持无线升级 (OTA)
- 高效代码大小架构，在 ROM 中装载驱动程序、TI-RTOS 和蓝牙®软件，让更多闪存供应用使用
- 符合 RoHS 标准的封装
 - 5mm × 5mm RHB VQFN32 (15 个 GPIO)
 - 7mm × 7mm RGZ VQFN48 (31 个 GPIO)
- 外设
 - 所有数字外设引脚均可连接任意 GPIO
 - 四个通用计时器模块 (8 个 16 位计时器或 4 个 32 位计时器，均采用 PWM)
 - 12 位 ADC、200ksps、8 通道模拟多路复用器
 - UART、I²C 和 I2S
 - 2 个同步串行接口 (SSI) (SPI、MICROWIRE 和 TI)
 - 实时时钟 (RTC)
 - AES-128 安全模块
 - 真随机数发生器 (TRNG)
 - 集成温度传感器
- 外部系统
 - 片上内部直流/直流转换器
 - 与 CC2590 和 CC2592 范围扩展器无缝集成
 - 极少的外部组件
 - 与采用 5mm × 5mm 和 7mm × 7mm VQFN 封装的 SimpleLink™ CC2640、CC2640R2F 和 CC2650 器件引脚兼容
 - 与采用 7mm × 7mm VQFN 封装的 SimpleLink™ CC2642R 和 CC2652R 器件引脚兼容
 - 与采用 5mm × 5mm VQFN 封装的 SimpleLink™ CC1350 器件引脚兼容
- 低功耗
 - 宽电源电压范围
 - 正常运行：1.8 至 3.8 V
 - 外部稳压器模式：1.7 至 1.95 V
 - 有源模式 RX：5.9 mA
 - 有源模式 TX (在 0dBm 条件下)：6.1 mA
 - 有源模式 TX (在 +5dBm 条件下)：9.1 mA
 - 有源模式 MCU：61μA/MHz
 - 有源模式 MCU：48.5CoreMark/mA
 - 待机：1.5 μA (RTC 运行，RAM/CPU 保持)
 - 关断：100nA (发生外部事件时唤醒)
- 射频 (RF) 部分
 - 与低功耗蓝牙 5.1 和早期 LE 规范兼容的 2.4GHz 射频收发器
 - 出色的接收器灵敏度 (对于 BLE 为 -97dBm)、可选择性和阻断性能
 - BLE 链路预算为 102dB
 - 高达 +5dBm 的可编程输出功率
 - 单端或差分 RF 接口
 - 适用于符合各项全球射频规范的系统
 - ETSI EN 300 328 (欧洲)
 - EN 300 440 2 类 (欧洲)
 - FCC CFR47 第 15 部分 (美国)
 - ARIB STD-T66 (日本)
- 开发 [工具和软件](#)
 - 全功能开发套件
 - 多个参考设计
 - SmartRF™ Studio
 - IAR Embedded Workbench® for Arm®
 - Code Composer Studio™ 集成式开发环境 (IDE)
 - Code Composer Studio™ Cloud IDE

2 应用

- 家庭和楼宇自动化
 - 联网电器
 - 照明
 - 智能锁
 - 网关
 - 安防系统
- 工业
 - 工厂自动化
 - 资产跟踪和管理
 - HMI
 - 门禁
- 电子销售终端 (EPOS)
 - 电子货架标签 (ESL)
- 健康和医疗
 - 电子温度计
 - SpO₂
 - 血糖监测仪和血压监测仪
 - 称重秤
 - 助听器
- 运动和健身设备
 - 可穿戴健身和活动监测仪
 - 智能追踪器
 - 患者监护仪
 - 健身器
- HID
 - 游戏
 - 指针设备 (无线键盘和鼠标)

3 说明

CC2640R2L 器件是一款 2.4GHz 无线微控制器 (MCU)，支持低功耗 [Bluetooth® 5.1](#) 和专有 2.4GHz 应用。该器件针对[医疗](#)、[资产跟踪](#)、个人电子产品、零售自动化和楼宇自动化市场以及需要工业性能的应用中的低功耗无线通信和高级传感进行了优化。该器件的突出特性包括：

- 支持 [Bluetooth® 5.1](#) 特性：LE 编码 PHY (远距离)、LE 2Mb PHY (高速)、广播扩展、多个广播集以及对 [Bluetooth® 5.0](#) 和早期低功耗规范的向后兼容性和支持。
- [SimpleLink™ CC2640R2 软件开发套件 \(SDK\)](#) 附带的完全合格的 [Bluetooth® 5.1](#) 软件协议栈，用于在强大的 Arm® Cortex®-M3 处理器上开发应用。
- 基于闪存的架构，具有加密加速器并提供片上和片外 OAD。
- 软件控制的专用无线电控制器 (Arm® Cortex®-M0) 提供灵活的低功耗射频收发器功能，支持多个物理层和射频标准。
- 出色的无线电敏感度和稳健性 (选择性与阻断) 性能，适用于低功耗 [Bluetooth®](#) (1Mbps PHY 时为 -97dBm)。

CC2640R2L 器件是 SimpleLink™ 微控制器 (MCU) 平台的一部分，该平台包括 Wi-Fi®、低功耗蓝牙、Thread、ZigBee®、Sub-1GHz MCU 和主机 MCU，它们共用一个通用、易于使用的开发环境，其中包含单核软件开发套件 (SDK) 和丰富的工具集。借助一次性集成的 SimpleLink™ 平台，可以将产品组合中的任何器件组合添加至您的设计中，从而在设计要求变更时实现 100% 的代码重用。如需更多信息，请访问 [SimpleLink™ MCU 平台](#)。

- (1) The package designator replaces the xxx in device name to form a complete device name, RGZ is 7-mm × 7-mm VQFN48, RHB is 5-mm × 5-mm VQFN32, RSM is 4-mm × 4-mm VQFN32, and YFV is 2.7-mm × 2.7-mm DSBGA.
- (2) CC2640R2L devices contain Bluetooth Low Energy Host and Controller libraries in ROM, leaving more of the 128KB Flash memory available for the customer application when used with supported BLE-Stack software protocol stack releases. Actual use of ROM and Flash memory by the protocol stack may vary depending on device software configuration. See www.ti.com for more details.
- (3) The CC2650 device supports all PHYs and can be reflashed to run all the supported standards.

SimpleLink™ CC2640R2 Wireless MCU LaunchPad™ Development Kit

The CC2640R2 LaunchPad™ development kit brings easy Bluetooth® low energy (BLE) connection to the LaunchPad ecosystem with the SimpleLink ultra-low power CC26xx family of devices. Compared to the CC2650 LaunchPad, the CC2640R2 LaunchPad provides the following:

- More free flash memory for the user application in the CC2640R2 wireless MCU
- Out-of-the-box support for Bluetooth 4.2 specification
- 4× faster Over-the-Air download speed compared to Bluetooth 4.1

SimpleLink™ Bluetooth low energy/Multi-standard SensorTag

The new SensorTag IoT kit invites you to realize your cloud-connected product idea. The new SensorTag now includes 10 low-power MEMS sensors in a tiny red package. And it is expandable with DevPacks to make it easy to add your own sensors or actuators.

8 Specifications

8.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)^{(1) (2)}

		MIN	MAX	UNIT
Supply voltage (VDDS, VDDS2, and VDDS3)	VDDR supplied by internal DC/DC regulator or internal GLDO. VDDS_DCDC connected to VDDS on PCB	- 0.3	4.1	V
Supply voltage (VDDS ⁽³⁾ and VDDR)	External regulator mode (VDDS and VDDR pins connected on PCB)	- 0.3	2.25	V
Voltage on any digital pin ^{(4) (5)}		- 0.3	VDDSx + 0.3, max 4.1	V
Voltage on crystal oscillator pins, X32K_Q1, X32K_Q2, X24M_N and X24M_P		- 0.3	VDDR + 0.3, max 2.25	V
Voltage on ADC input (V _{in})	Voltage scaling enabled	- 0.3	VDDS	V
	Voltage scaling disabled, internal reference	- 0.3	1.49	
	Voltage scaling disabled, VDDS as reference	- 0.3	VDDS / 2.9	
Input RF level			5	dBm
T _{stg}	Storage temperature	- 40	150	°C

- (1) All voltage values are with respect to ground, unless otherwise noted.
(2) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(3) In external regulator mode, VDDS2 and VDDS3 must be at the same potential as VDDS.
(4) Including analog-capable DIO.
(5) Each pin is referenced to a specific VDDsx (VDDS, VDDS2 or VDDS3). For a pin-to-VDDS mapping table, see [表 9-2](#).

8.2 ESD Ratings

			VALUE	UNIT
V _{ESD} Electrostatic discharge (RHB and RGZ packages)	Human body model (HBM), per ANSI/ESDA/JEDEC JS001 ⁽¹⁾	All pins	±2500	V
	Charged device model (CDM), per JESD22-C101 ⁽²⁾	RF pins	±500	
		Non-RF pins	±500	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

8.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
Ambient temperature			- 40	85	°C
Operating supply voltage (VDDS and VDDR), external regulator mode	For operation in 1.8-V systems (VDDS and VDDR pins connected on PCB, internal DC/DC cannot be used)		1.7	1.95	V
Operating supply voltage VDDS	For operation in battery-powered and 3.3-V systems (internal DC/DC can be used to minimize power consumption)		1.8	3.8	V
Operating supply voltages VDDS2 and VDDS3		VDDS < 2.7 V	1.8	3.8	V
Operating supply voltages VDDS2 and VDDS3		VDDS ≥ 2.7 V	1.9	3.8	V

8.4 Power Consumption Summary

Measured on the TI CC2650EM-5XD reference design with $T_c = 25^\circ\text{C}$, $V_{\text{DDS}} = 3.0\text{ V}$ with internal DC/DC converter, unless otherwise noted.

9 Detailed Description

9.1 Overview

The core modules of the CC2640R2L MCU are shown in [节 9.2](#).

9.2 Functional Block Diagram

9.3 Main CPU

The SimpleLink™ CC2640R2L Wireless MCU contains an Arm Cortex-M3 (CM3) 32-bit CPU, which runs the application and the higher layers of the protocol stack.

The CM3 processor provides a high-performance, low-cost platform that meets the system requirements of minimal memory implementation, and low-power consumption, while delivering outstanding computational performance and exceptional system response to interrupts.

Arm Cortex-M3 features include:

- 32-bit Arm Cortex-M3 architecture optimized for small-footprint embedded applications
- Outstanding processing performance combined with fast interrupt handling
- Arm Thumb®-2 mixed 16- and 32-bit instruction set delivers the high performance expected of a 32-bit Arm core in a compact memory size usually associated with 8- and 16-bit devices, typically in the range of a few kilobytes of memory for microcontroller-class applications:
 - Single-cycle multiply instruction and hardware divide
 - Atomic bit manipulation (bit-banding), delivering maximum memory use and streamlined peripheral control
 - Unaligned data access, enabling data to be efficiently packed into memory
- Fast code execution permits slower processor clock or increases sleep mode time
- Harvard architecture characterized by separate buses for instruction and data
- Efficient processor core, system, and memories
- Hardware division and fast digital-signal-processing oriented multiply accumulate
- Saturating arithmetic for signal processing
- Deterministic, high-performance interrupt handling for time-critical applications
- Enhanced system debug with extensive breakpoint and trace capabilities
- Serial wire trace reduces the number of pins required for debugging and tracing
- Migration from the ARM7™ processor family for better performance and power efficiency
- Optimized for single-cycle flash memory use
- Ultra-low-power consumption with integrated sleep modes
- 1.25 DMIPS per MHz

9.4 RF Core

The RF Core contains an Arm Cortex-M0 processor that interfaces the analog RF and base-band circuits, handles data to and from the system side, and assembles the information bits in a given packet structure. The RF core offers a high level, command-based API to the main CPU.

The RF core is capable of autonomously handling the time-critical aspects of the radio protocols (Bluetooth low energy) thus offloading the main CPU and leaving more resources for the user application.

The RF core has a dedicated 4-KB SRAM block and runs initially from separate ROM memory. The Arm Cortex-M0 processor is not programmable by customers.

9.5 Memory

The Flash memory provides nonvolatile storage for code and data. The Flash memory is in-system programmable.

The SRAM (static RAM) can be used for both storage of data and execution of code and is split into two 4-KB blocks and two 6-KB blocks. Retention of the RAM contents in standby mode can be enabled or disabled individually for each block to minimize power consumption. In addition, if flash cache is disabled, the 8-KB cache can be used as a general-purpose RAM.

The ROM provides preprogrammed embedded TI-RTOS kernel, Driverlib, and lower layer protocol stack software (Bluetooth low energy controller). It also contains a bootloader that can be used to reprogram the device using SPI or UART. For CC2640R2Lxxx devices, the ROM contains Bluetooth 4.2 low energy host- and controller software libraries, leaving more of the flash memory available for the customer application.

9.6 Debug

The on-chip debug support is done through a dedicated cJTAG (IEEE 1149.7) or JTAG (IEEE 1149.1) interface.

9.7 Power Management

To minimize power consumption, the CC2640R2L MCU supports a number of power modes and power management features (see [表 9-1](#)).

(1) Not including RTOS overhead

In active mode, the application CM3 CPU is actively executing code. Active mode provides normal operation of the processor and all of the peripherals that are currently enabled. The system clock can be any available clock source (see [表 9-1](#)).

In idle mode, all active peripherals can be clocked, but the Application CPU core and memory are not clocked and no code is executed. Any interrupt event will bring the processor back into active mode.

In standby mode, only the always-on domain (AON) is active. An external wake-up event or RTC event is required to bring the device back to active mode. MCU peripherals with retention do not need to be reconfigured when waking up again, and the CPU continues execution from where it went into standby mode. All GPIOs are latched in standby mode.

In shutdown mode, the device is turned off entirely, including the AON domain. The I/Os are latched with the value they had before entering shutdown mode. A change of state on any I/O pin defined as a *wake-up from Shutdown pin* wakes up the device and functions as a reset trigger. The CPU can differentiate between a reset in this way, a reset-by-reset pin, or a power-on-reset by reading the reset status register. The only state retained in this mode is the latched I/O state and the Flash memory contents.

9.8 Clock Systems

The CC2640R2L supports two external and two internal clock sources.

A 24-MHz crystal is required as the frequency reference for the radio. This signal is doubled internally to create a 48-MHz clock.

The 32-kHz crystal is optional. *Bluetooth* low energy requires a slow-speed clock with better than ± 500 ppm accuracy if the device is to enter any sleep mode while maintaining a connection. The internal 32-kHz RC oscillator can in some use cases be compensated to meet the requirements. The low-speed crystal oscillator is designed for use with a 32-kHz watch-type crystal.

The internal high-speed oscillator (48-MHz) can be used as a clock source for the CPU subsystem.

The internal low-speed oscillator (32.768-kHz) can be used as a reference if the low-power crystal oscillator is not used.

The 32-kHz clock source can be used as external clocking reference through GPIO.

9.9 General Peripherals and Modules

The I/O controller controls the digital I/O pins and contains multiplexer circuitry to allow a set of peripherals to be assigned to I/O pins in a flexible manner. All digital I/Os are interrupt and wake-up capable, have a programmable pullup and pulldown function and can generate an interrupt on a negative or positive edge (configurable). When configured as an output, pins can function as either push-pull or open-drain. Five GPIOs have high drive capabilities (marked in **bold** in [节 7](#)).

The SSIs are synchronous serial interfaces that are compatible with SPI, MICROWIRE, and Texas Instruments synchronous serial interfaces. The SSIs support both SPI master and slave up to 4 MHz.

The UART implements a universal asynchronous receiver/transmitter function. It supports flexible baud-rate generation up to a maximum of 3 Mbps.

Timer 0 is a general-purpose timer module (GPTM), which provides two 16-bit timers. The GPTM can be configured to operate as a single 32-bit timer, dual 16-bit timers or as a PWM module.

Timer 1, Timer 2, and Timer 3 are also GPTMs. Each of these timers is functionally equivalent to Timer 0.

In addition to these four timers, the RF core has its own timer to handle timing for RF protocols; the RF timer can be synchronized to the RTC.

The I²C interface is used to communicate with devices compatible with the I²C standard. The I²C interface supports 100-kHz and 400-kHz operation, and can serve as both I²C master and I²C slave.

The TRNG module provides a true, nondeterministic noise source for the purpose of generating keys, initialization vectors (IVs), and other random number requirements. The TRNG is built on 24 ring oscillators that create unpredictable output to feed a complex nonlinear combinatorial circuit.

The watchdog timer is used to regain control if the system fails due to a software error after an external device fails to respond as expected. The watchdog timer can generate an interrupt or a reset when a predefined time-out value is reached.

The device includes a direct memory access (μ DMA) controller. The μ DMA controller provides a way to offload data transfer tasks from the CM3 CPU, allowing for more efficient use of the processor and the available bus bandwidth. The μ DMA controller can perform transfer between memory and peripherals. The μ DMA controller has dedicated channels for each supported on-chip module and can be programmed to automatically perform transfers between peripherals and memory as the peripheral is ready to transfer more data. Some features of the μ DMA controller include the following (this is not an exhaustive list):

- Highly flexible and configurable channel operation of up to 32 channels
- Transfer modes:
 - Memory-to-memory
 - Memory-to-peripheral
 - Peripheral-to-memory
 - Peripheral-to-peripheral
- Data sizes of 8, 16, and 32 bits

The AON domain contains circuitry that is always enabled, except for in Shutdown (where the digital supply is off). This circuitry includes the following:

- The RTC can be used to wake the device from any state where it is active. The RTC contains three compare and one capture registers. With software support, the RTC can be used for clock and calendar operation. The RTC is clocked from the 32-kHz RC oscillator or crystal. The RTC can also be compensated to tick at the correct frequency even when the internal 32-kHz RC oscillator is used instead of a crystal.
- The battery monitor and temperature sensor are accessible by software and give a battery status indication as well as a coarse temperature measure.

The ADC is a 12-bit, 200 ksamples per second (ksps) ADC with eight inputs and a built-in voltage reference. The ADC can be triggered by many different sources, including timers, I/O pins, software, and the RTC.

9.10 Voltage Supply Domains

The CC2640R2L device can interface to two or three different voltage domains depending on the package type. On-chip level converters ensure correct operation as long as the signal voltage on each input/output pin is set with respect to the corresponding supply pin (VDDS, VDDS2 or VDDS3). 表 9-2 lists the pin-to-VDDS mapping.

表 9-2. Pin Function to VDDS Mapping Table

	Package	
	VQFN 7 × 7 (RGZ)	VQFN 5 × 5 (RHB)
VDDS⁽¹⁾	DIO 23 – 30 Reset_N	DIO 7 – 14 Reset_N
VDDS2	DIO 0 – 11	DIO 0 – 6 JTAG
VDDS3	DIO 12 – 22 JTAG	N/A

(1) VDDS_DCDC must be connected to VDDS on the PCB.

9.11 System Architecture

Depending on the product configuration, CC26xx can function either as a Wireless Network Processor (WNP—an IC running the wireless protocol stack, with the application running on a separate MCU), or as a System-on-Chip (SoC), with the application and protocol stack running on the Arm Cortex-M3 core inside the device.

In the first case, the external host MCU communicates with the device using SPI or UART. In the second case, the application must be written according to the application framework supplied with the wireless protocol stack.

10 Application, Implementation, and Layout

备注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

10.1 Application Information

Very few external components are required for the operation of the CC2640R2L device. This section provides some general information about the various configuration options when using the CC2640R2L in an application, and then shows two examples of application circuits with schematics and layout. This is only a small selection of the many application circuit examples available as complete reference designs from the product folder on www.ti.com.

图 10-1 shows the various RF front-end configuration options. The RF front end can be used in differential- or single-ended configurations with the options of having internal or external biasing. These options allow for various trade-offs between cost, board space, and RF performance. Differential operation with external bias gives the best performance while single-ended operation with internal bias gives the least amount of external components and the lowest power consumption. Reference designs exist for each of these options.

图 10-1. CC2640R2L Application Circuit

Figure 10-2 shows the various supply voltage configuration options. Not all power supply decoupling capacitors or digital I/Os are shown. Exact pin positions will vary between the different package options. For a detailed overview of power supply decoupling and wiring, see the TI reference designs and the CC26xx technical reference manual ().

11 Device and Documentation Support

11.1 Device Nomenclature

To designate the stages in the product development cycle, TI assigns prefixes to all pre-production part numbers or date-code markings. Each device has one of three prefixes/identifications: X, P, or null (no prefix) (for example, CC2640R2L is in production; therefore, no prefix/identification is assigned).

Device development evolutionary flow:

- X** Experimental device that is not necessarily representative of the final device's electrical specifications and may not use production assembly flow.
- P** Prototype device that is not necessarily the final silicon die and may not necessarily meet final electrical specifications.

null Production version of the silicon die that is fully qualified.

Production devices have been characterized fully, and the quality and reliability of the device have been demonstrated fully. TI's standard warranty applies.

Predictions show that prototype devices (X or P) have a greater failure rate than the standard production devices. Texas Instruments recommends that these devices not be used in any production system because their expected end-use failure rate still is undefined. Only qualified production devices are to be used.

TI device nomenclature also includes a suffix with the device family name. This suffix indicates the package type (for example, RGZ).

For orderable part numbers of the CC2640R2L device in the RHB and RGZ package types, see the *Package Option Addendum* of this document, the TI website (www.ti.com), or contact your TI sales representative.

11.2 Tools and Software

TI offers an extensive line of development tools, including tools to evaluate the performance of the processors, generate code, develop algorithm implementations, and fully integrate and debug software and hardware modules.

The following products support development of the CC2640R2L device applications:

Software Tools:

SmartRF Studio 7 is a PC application that helps designers of radio systems to easily evaluate the RF-IC at an early stage in the design process.

- Test functions for sending and receiving radio packets, continuous wave transmit and receive
- Evaluate RF performance on custom boards by wiring it to a supported evaluation board or debugger
- Can also be used without any hardware, but then only to generate, edit and export radio configuration settings
- Can be used in combination with several development kits for Texas Instruments' CCxxxx RF-ICs

IDEs and Compilers:

Code Composer Studio™ Integrated Development Environment (IDE):

- Integrated development environment with project management tools and editor
- Code Composer Studio (CCS) 7.0 and later has built-in support for the CC26xx device family
- Best support for XDS debuggers; XDS100v3, XDS110 and XDS200
- High integration with TI-RTOS with support for TI-RTOS Object View

IAR Embedded Workbench® for Arm®:

- Integrated development environment with project management tools and editor
- IAR EWARM 7.80.1 and later has built-in support for the CC26xx device family
- Broad debugger support, supporting XDS100v3, XDS200, IAR I-Jet and Segger J-Link
- Integrated development environment with project management tools and editor
- RTOS plugin available for **TI-RTOS**

For a complete listing of development-support tools for the CC2640R2L platform, visit the Texas Instruments website at www.ti.com. For information on pricing and availability, contact the nearest TI field sales office or authorized distributor.

11.3 Documentation Support

To receive notification of documentation updates, navigate to the device product folder on ti.com (**CC2640R2L**). In the upper right corner, click on Alert me to register and receive a weekly digest of any product information that has changed. 11.7 Trademarks

SmartRF™, Code Composer Studio™, LaunchPad™, and TI E2E™ are trademarks of Texas Instruments.

IEEE Std 1241™ is a trademark of Institute of Electrical and Electronics Engineers, Incorporated.

ARM7™ is a trademark of Arm Limited (or its subsidiaries).

Arm®, Cortex®, and Thumb® are registered trademarks of Arm Limited (or its subsidiaries).

CoreMark® is a registered trademark of Embedded Microprocessor Benchmark Consortium.

蓝牙® is a registered trademark of Bluetooth SIG Inc.

IAR Embedded Workbench® is a registered trademark of IAR Systems AB.

Wi-Fi® is a registered trademark of Wi-Fi Alliance.

ZigBee® is a registered trademark of ZigBee Alliance.

所有商标均为其各自所有者的财产。

11.8 静电放电警告

静电放电 (ESD) 会损坏这个集成电路。德州仪器 (TI) 建议通过适当的预防措施处理所有集成电路。如果不遵守正确的处理和安装程序，可能会损坏集成电路。

ESD 的损坏小至导致微小的性能降级，大至整个器件故障。精密的集成电路可能更容易受到损坏，这是因为非常细微的参数更改都可能会导致器件与其发布的规格不相符。

11.9 Export Control Notice

Recipient agrees to not knowingly export or re-export, directly or indirectly, any product or technical data (as defined by the U.S., EU, and other Export Administration Regulations) including software, or any controlled product restricted by other applicable national regulations, received from disclosing party under nondisclosure obligations (if any), or any direct product of such technology, to any destination to which such export or re-export is restricted or prohibited by U.S. or other applicable laws, without obtaining prior authorization from U.S. Department of Commerce and other competent Government authorities to the extent required by those laws.

12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical packaging and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
