

# DRV3205-Q1 集成三个分流放大器和增强型保护、诊断和监视功能的三相汽车栅极驱动器

## 1 特性

- 符合汽车类应用的 AEC-Q100 标准:
  - 器件温度 1 级: -40°C 至 +125°C 的环境运行温度范围
- 适用于电机控制的三相桥驱动器
- 适用于 12V 和 24V 应用
- 集成三个高精度电流感测放大器
- 集成升压转换器, 栅极驱动到 4.75V
- 驱动 6 个独立的 N 沟道功率金属氧化物半导体场效应晶体管 (MOSFET)
- 针对大电流 FET 提供强力的 1A 栅极驱动
- 可编程死区时间
- 脉宽调制 (PWM) 频率最高达 20kHz
- 支持 100% 占空比运行
- 短路保护功能
  - VDS 监视 (可调检测电平)
  - 分流限制 (可调检测电平)
- 过压和欠压保护
- 过热警告和关断
- 通过 SPI 进行复杂的故障检测和处理
- 系统监控
  - Q&A 看门狗
  - I/O 电源监视
  - ADREF 监视
- 可编程内部故障诊断
- 休眠模式功能
- 耐热增强型 48 引脚薄型四方扁平 (HTQFP)
   
PowerPAD<sup>TM</sup>IC 封装 (7mm × 7mm 尺寸)

## 2 应用

- 汽车电机控制 应用
  - 电动助力转向系统 (EPS, 电动液压助力转向 (EHPS))
  - 全电刹车和刹车辅助
  - 变速箱
  - 泵
- 工业电机控制 应用

## 3 说明

DRV3205-Q1 桥式驱动器专用于汽车三相无刷直流电机控制 应用。该器件为标准电平 N 沟道 MOSFET 晶体管提供六个专用驱动器。集成 FET 的升压转换器可提供过驱电压, 即使在低至 4.75V 的电池电压下也能够实现对功率级的完全控制。这种驱动器强度适用于大电流 应用, 并且可通过编程来限制峰值输出电流。

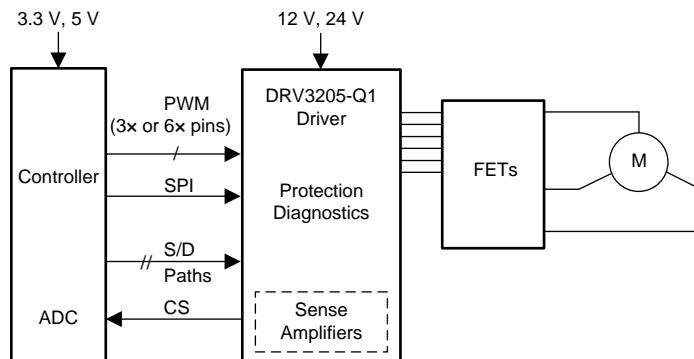

该器件整合了稳健的 FET 保护和系统监视功能, 例如 Q&A 看门狗以及用于 I/O 电源和 ADC 基准电压的电压监视器。集成的内部诊断功能可通过 SPI 接口进行访问和编程。

### 器件信息<sup>(1)</sup>

器件型号	封装	封装尺寸 (标称值)
DRV3205-Q1	HTQFP (48)	7.00mm x 7.00mm

(1) 如需了解所有可用封装, 请参阅数据表末尾的可订购产品附录。

**4 修订历史记录**

注：之前版本的页码可能与当前版本有所不同。

Changes from Revision D (November 2016) to Revision E	Page
• Added the propagation delay graphs to the <i>Typical Characteristics</i> section .....	15
• Changed the note on the <i>Single 8-Bit SPI Frame/Transfer</i> figure .....	17
• Updated the <i>Typical Application Diagram</i> figure .....	22

Changes from Revision C (October 2016) to Revision D	Page
• Changed the maximum value for the RVSET resistor error detection parameter (4.4.31) from 1.5 to 1.4 kΩ in the <i>Electrical Characteristics</i> table .....	10
• Changed the units and symbol for the RVSET output voltage parameter (4.4.32–4.4.34), and fixed duplicate position number for $T_J = 25^{\circ}\text{C}$ and $125^{\circ}\text{C}$ in the <i>Electrical Characteristics</i> table .....	10
• Added characterization note to parameters 5.7 and 5.29 through 5.30e in the <i>Electrical Characteristics</i> table .....	11
• Deleted the VS voltage range test condition from the boost output voltage parameter (6.1) in the <i>Electrical Characteristics</i> table .....	12
• Added new test condition to the switching frequency parameter (6.3) and add new values for switching frequency at $V_S < 6$ (6.31) in the <i>Electrical Characteristics</i> table .....	12
• Changed the maximum value for the input pulldown resistor at EN pin parameter (7.4) from 300 to 360 kΩ in the <i>Electrical Characteristics</i> table .....	12
• Changed the position number for the output high and low voltage 2 parameters in the <i>Electrical Characteristics</i> table ...	12
• Added characterization note to parameters 13.2 through 13.11 in the <i>Serial Peripheral Interface Timing Requirements</i> table .....	14

Changes from Revision B (October 2016) to Revision C	Page
• Clarified the temperature for the BOOST pin quiescent current parameters (3.6B and 3.6C) and added new temperature condition (3.62B and 3.61C) in the <i>Recommended Operating Conditions</i> table .....	7
• Deleted the maximum value for the input hysteresis parameters (7.3 and 7.3A) in the <i>Electrical Characteristics</i> table ....	12
• Changed the values for the input pullup resistance parameter (7.5) in the <i>Electrical Characteristics</i> table .....	12

---

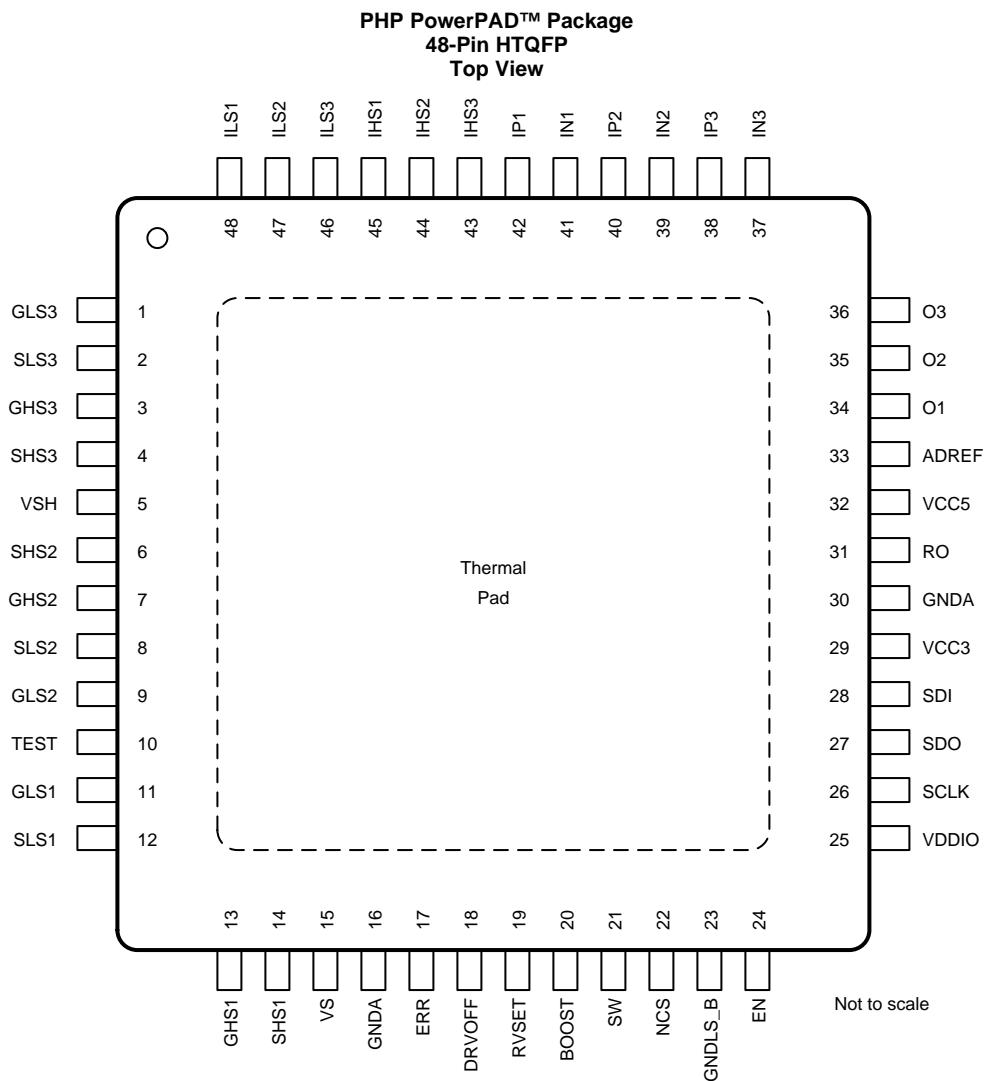

Changes from Revision A (October 2016) to Revision B	Page
• 已更改 已将特性部分的 AEC-Q1100 改为 AEC-Q100.....	1
• Changed the maximum value for the VCC5 and VCC3 short-to-ground current from 70 to 80 mA in the <i>Absolute Maximum Ratings</i> table .....	6
• Changed the minimum value for the high-side/low-side driver shutdown current parameter from 7 to 2 mA in the <i>Electrical Characteristics</i> table .....	11

---

Changes from Original (September 2016) to Revision A	Page
• 已更改 器件状态，从产品预览改为量产数据 .....	1

---

## 5 Pin Configuration and Functions

### Pin Functions

NO.	PIN	TYPE <sup>(1)</sup>	DESCRIPTION
	NAME		
1	GLS3	PWR	Gate low-side 3, connected to gate of external power MOSFET.
2	SLS3	PWR	Source low-side 3, connected to external power MOSFET for gate discharge and VDS monitoring.
3	GHS3	PWR	Gate high-side 3, connected to gate of external power MOSFET.
4	SHS3	PWR	Source high-side 3, connected to external power MOSFET for gate discharge and VDS monitoring.
5	VSH	HVI_A	Sense high-side, sensing VS connection of the external power MOSFETs for VDS monitoring.
6	SHS2	PWR	Source high-side 2, connected to external power MOSFET gate discharge and VDS monitoring.
7	GHS2	PWR	Gate high-side 2, connected to gate of external power MOSFET.
8	SLS2	PWR	Source low-side 2, connected to external power MOSFET for gate discharge and VDS monitoring.
9	GLS2	PWR	Gate low-side 2, connected to gate of external power MOSFET.
10	TEST	HVI_A	Test mode input, during normal application connected to ground.

(1) Description of pin type: GND = Ground; HVI\_A = High-voltage input analog; HVI\_D = High-voltage input digital; LVI\_A = Low-voltage input analog; LVO\_A = Low-voltage output analog; LVO\_D = Low-voltage output digital; NC = No connect; PWR = Power output; Supply = Supply input

**Pin Functions (continued)**

<b>PIN</b>		<b>TYPE<sup>(1)</sup></b>	<b>DESCRIPTION</b>
<b>NO.</b>	<b>NAME</b>		
11	GLS1	PWR	Gate low-side 1, connected to gate of external power MOSFET.
12	SLS1	PWR	Source low-side 1, connected to external power MOSFET for gate discharge and VDS monitoring.
13	GHS1	PWR	Gate high-side 1, connected to gate of external power MOS transistor.
14	SHS1	PWR	Source high-side 1, connected to external power MOS transistor for gate discharge and VDS.
15	VS	Supply	Power-supply voltage (externally protected against reverse battery connection).
16	GNDA	GND	Analog ground.
17	ERR	LVO_D	Error (low active), Error pin to indicate detected error.
18	DRVOFF	HVI_D	Driver OFF (high active), secondary bridge driver disable.
19	RVSET	HVI_A	VDDIO / ADREF OV/UV configuration register.
20	BOOST	Supply	Boost output voltage, used as supply for the gate drivers.
21	SW	PWR	Boost converter switching node connected to external coil and external diode.
22	NCS	HVI_D	SPI chip select.
23	GNDLS_B	GND	Boost GND to set current limit. Boost switching current goes through this pin through external resistor to ground.
24	EN	HVI_D	Enable (high active) of the device.
25	VDDIO	Supply	I/O supply voltage, defines the interface voltage of digital I/O, for example, SPI.
26	SCLK	HVI_D	SPI clock.
27	SDO	LVO_D	SPI data output.
28	SDI	HVI_D	SPI data input.
29	VCC3	LVO_A	VCC3 regulator, for internal use only. TI recommends an external decoupling capacitor of 0.1 $\mu$ F. External load < 100 $\mu$ A.
30	GNDA	GND	Analog ground.
31	RO	LVO_A	Analog output.
32	VCC5	LVO_A	VCC5 regulator, for internal use only. Recommended external decoupling capacitor 1 $\mu$ F. External load < 100 $\mu$ A.
33	ADREF	LVI_A	ADC reference of MCU, used as maximum voltage clamp for O1 to O3.
34	O1	LVO_A	Output current sense amplifier 1.
35	O2	LVO_A	Output current sense amplifier 2.
36	O3	LVO_A	Output current sense amplifier 3.
37	IN3	LVI_A	Current sense negative input 3.
38	IP3	LVI_A	Current sense positive input 3.
39	IN2	LVI_A	Current sense input N 2.
40	IP2	LVI_A	Current sense input P 2.
41	IN1	LVI_A	Current sense input N 1.
42	IP1	LVI_A	Current sense input P 1.
43	IHS3	HVI_D	High-side input 3, digital input to drive the HS3.
44	IHS2	HVI_D	Input HS 2, digital input to drive the HS2.
45	IHS1	HVI_D	Input HS 1, digital input to drive the HS1.
46	ILS3	HVI_D	Low-side input 3, digital input to drive the LS3.
47	ILS2	HVI_D	Input LS 2, digital input to drive the LS2.
48	ILS1	HVI_D	Input LS 1, digital input to drive the LS1.

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)(2)</sup>

POS				MIN	MAX	UNIT
2.1	VS, VSH	DC voltage		-0.3	60	V
2.1a	VS	DC voltage	Negative voltages with minimum serial resistor 5 Ω, T <sub>A</sub> = 25°C	-5		V
2.1b	VSH	DC voltage	Negative voltages with minimum serial resistor 10 Ω, T <sub>A</sub> = 25°C	-5		V
2.1c	VS	DC voltage	Negative voltages with minimum serial resistor 5 Ω, T <sub>A</sub> = 105°C	-2.5		V
2.1d	VSH	DC voltage	Negative voltages with minimum serial resistor 10 Ω, T <sub>A</sub> = 105°C	-2.5		V
2.2A	GHSx	Gate high-side voltage		-9	70	V
2.2B	SHSx	Source high-side voltage		-9	70	V
2.3	GHSx-SHSx	Gate-source high-side voltage difference	Externally driven, internal limited, see position 5.4 in <i>Electrical Characteristics</i>	-0.3	15	V
2.4	GLSx	Gate low-side voltage		-9	20	V
2.5	SLSx	Source low-side voltage		-9	7	V
2.6	GLSx-SLSx	Gate-source low-side voltage difference	Externally driven, internal limited, see position 5.5 in <i>Electrical Characteristics</i>	-0.3	15	V
2.7	BOOST, SW	Boost converter		-0.3	70	V
2.8	INx, IPx	Current sense input voltage		-9	7	V
2.8A	INx, IPx	Current sense input current	Clamping current	-5	5	mA
2.8C	Ox	Current sense output voltage		-0.3	ADREF +0.3	V
2.8D	Ox	Forced input current		-10	10	mA
2.9	VDDIO	Analog input voltage		-0.3	60	V
2.9a	ADREF	Analog input voltage		-0.3	60	V
2.10	ILSx,IHSx, EN, DRVOFF, SCLK, NCS, SDI	Digital input voltage		-0.3	60	V
2.11	RVSET	Analog input voltage		-0.3	60	V
2.13	GNDA, GNDLS_B	Difference between GNDA and GNDLS_B		-0.3	0.3	V
2.20		Maximum slew rate of SHSx pins, SR <sub>SHS</sub>		-250	250	V/μs
2.21	ERR, SDO, RO	Analog and digital output voltages		-0.3	6	V
2.21A	ERR, SDO, RO	Forced input/output current		-10	10	mA
2.22	TEST	Unused pins. Connect to GND.		-0.3	0.3	V
2.24	VCC5	Internal supply voltage		-0.3	6	V
2.24A		Short-to-ground current, I <sub>VCC5</sub> <sup>(3)</sup>	Internal current limit		80	mA
2.25	VCC3	Internal supply voltage		-0.3	3.6	V
2.26		Short-to-ground current, I <sub>VCC3</sub>	Limited by VCC5		80	mA
2.27		Driver FET total gate charge (per FET), Q <sub>gmax</sub>	VS = 12 V, f <sub>PWM</sub> = 20 kHz, 6 FETs ON/OFF per PWM cycle		200 <sup>(4)</sup>	nC
2.28			VS = 24 V, f <sub>PWM</sub> = 20 kHz, 6 FETs ON/OFF per PWM cycle		100 <sup>(4)</sup>	nC

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to network ground terminal, unless specified otherwise.
- (3) I<sub>VCC5</sub> is not specifying VCC5 output current capability for external load. The allowed external load on VCC5 is specified at position 3.18 in *Recommended Operating Conditions*.
- (4) The maximum value also depends on PCB thermal design, modulation scheme, and motor operation time.

## Absolute Maximum Ratings (continued)

over operating free-air temperature range (unless otherwise noted)<sup>(1)(2)</sup>

POS			MIN	MAX	UNIT
2.14		Operating virtual junction temperature, $T_J$	-40	150	°C
2.15		Storage temperature, $T_{stg}$	-55	165	°C

## 6.2 ESD Ratings

POS				VALUE	UNIT
2.17	$V_{(ESD)}$ Electrostatic discharge	Human-body model (HBM), per AEC Q100-002 <sup>(1)</sup>	All pins	±2000	V
2.18			Pins 4, 6, and 14	±4000	
2.19		Charged-device model (CDM), per AEC Q100-011	All pins	±500	
			Corner pins (1, 12, 13, 24, 25, 36, 37, and 48)	±750	

(1) AEC Q100-002 indicates that HBM stressing shall be in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

## 6.3 Recommended Operating Conditions

POS			MIN	NOM	MAX	UNIT
3.1	VS	Supply voltage, normal voltage operation	Full device functionality. Operation at VS = 4.75 V only when coming from higher VS. Minimum VS for startup = 4.85 V	4.75	40	V
3.2	VSLO	Supply voltage, logic operation	Logic functional (during battery cranking after coming from full device functionality)	4	40	V
3.3	VDDIO	Supply voltage for digital I/Os		2.97	5.5	V
3.4	D	Duty cycle of bridge drivers		0%	100%	
3.5	$f_{PWM}$	PWM switching frequency		0	22 <sup>(1)</sup>	kHz
3.6A	$I_{VSn}$	VS quiescent current normal operation (boost converter enabled, drivers not switching)	Boost converter enabled, see and for SHSx/SLSx connections. EN_GDBIAS = 1		22	mA
3.61A	$I_{VSn}$	VS quiescent current normal operation (boost converter enabled, drivers not switching)	Boost converter enabled, see and for SHSx/SLSx connections. EN_GDBIAS = 0		22.3	mA
3.6B	$I_{BOOSTn}$	BOOST pin quiescent current normal operation (drivers not switching)	4.75 V < VS < 20 V, $T_A$ = 25°C to 125°C		9	mA
3.62B			4.75 V < VS < 20 V, $T_A$ = -40°C		10	mA
3.61B	$I_{VSn}$	VS quiescent additional current normal operation because of RVSET thermal voltage output enabled (boost converter enabled, drivers not switching)	THERMAL_RVSET_EN = 1		0.6	mA
3.6C	$I_{BOOSTn}$	BOOST pin quiescent current normal operation (drivers not switching)	20 < VS < 40 V, $T_A$ = 25°C to 125°C		9.5	mA
3.61C			20 < VS < 40 V, $T_A$ = -40°C		10.5	
3.6D	$I_{BOOST,sw}$	BOOST pin additional load current because of switching gate drivers	Excluding FET gate charge current. 20-kHz all gate drivers switching at the same time. EN_GDBIAS = 1		4	mA
3.61D	$I_{BOOST,sw}$	BOOST pin additional load current because of switching gate drivers	Excluding FET gate charge current. 20-kHz all gate drivers switching at the same time. EN_GDBIAS = 0		5.4	mA
3.75	$I_{VSq\_1}$	VS quiescent current shutdown (sleep mode) 1	VS = 14 V, no operation, $T_J$ < 25°C, EN = Low, total leakage current on all supply connected pins		20	µA
3.75a	$I_{VSq\_2}$	VS quiescent current shutdown (sleep mode) 2	VS = 14 V, no operation, $T_J$ < 85°C, EN = Low, total leakage current on all supply connected pins		30	µA
3.8	$T_J$	Junction temperature		-40	150	°C
3.9	$T_A$	Operating ambient free-air temperature	With proper thermal connection	-40	125	°C
3.11	$V_{INx}, V_{IPx}$	Current sense input voltage	$V_{IPx} - V_{INx}$ , RO = 2.5 V GAIN = 12	-0.15	0.15	V
3.13	ADREF	Clamping voltage for current sense amplifier outputs O1/2/3		2.97	5.5	V
3.13a		Reserved				V

(1) Maximum PWM allowed also depends on maximum operating temperature, FET gate charge current, VS supply voltage, modulation scheme, and PCB thermal design.

## Recommended Operating Conditions (continued)

POS				MIN	NOM	MAX	UNIT
3.13b	Reserved						V
3.14	VCC3	Internal supply voltage	VS > 4 V, external load current <100 $\mu$ A, decoupling capacitor typical 0.1 $\mu$ F	3 <sup>(1)</sup>		3.3	V
3.15	I <sub>VCC3</sub>	VCC3 output current	Intended for MCU ADC input	0		100	$\mu$ A
3.16	C <sub>VCC3</sub>	VCC3 decoupling capacitance		0.075	0.1	0.2	$\mu$ F
3.17	VCC5	Internal supply voltage	VS > 6 V, external load current < 100 $\mu$ A, decoupling capacitor typical 1 $\mu$ F	5.15		5.45	V
3.18	I <sub>VCC5</sub>	VCC5 output current	Intended for MCU ADC input	0		100	$\mu$ A
3.19	C <sub>VCC5</sub>	VCC5 decoupling capacitance		0.5	1	1.5	$\mu$ F

## 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		DRV3205-Q1	UNIT
		PHP (HTQFP)	
		48 PINS	
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	25.7	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	10.3	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	6	°C/W
Ψ <sub>JT</sub>	Junction-to-top characterization parameter	0.2	°C/W
Ψ <sub>JB</sub>	Junction-to-board characterization parameter	5.9	°C/W
R <sub>θJC(bot)</sub>	Junction-to-case (bottom) thermal resistance	0.3	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report (SPRA953).

## 6.5 Electrical Characteristics

over operating temperature T<sub>J</sub> = –40°C to 150°C and recommended operating conditions, VS = 4.75 V to 40 V<sup>(1)</sup>, f<sub>PWM</sub> < 20 kHz (unless otherwise noted)

POS	PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>4.1 CURRENT SENSE AMPLIFIER</b>						
4.2.1	V <sub>off1a</sub>	Initial input offset of amplifiers	T <sub>J</sub> = 25°C, ADREF = 5 V, RO_CFG [4:0] = 5'b11000: ADREF × 25 / 50	±1		mV
4.2.1a			T <sub>J</sub> = 25°C, ADREF = 3.3 V, RO_CFG [4:0] = 5'b11000: ADREF × 25 / 50	±1		mV
4.2.2	V <sub>off1b</sub>	Temperature and aging offset <sup>(2)</sup>	ADREF = 5 V, RO_CFG [4:0] = 5'b11000: ADREF × 25 / 50	±1		mV
4.2.2a			ADREF = 3.3 V, RO_CFG [4:0] = 5'b11000: ADREF × 25 / 50	±1		mV
4.2.3	V <sub>com1</sub> <sup>(3)</sup>	Input common voltage range		–3	3	V
4.2.4	V <sub>Oa</sub>	Nominal output voltage level, positive ox swing	Normal voltage operation, VS ≥ 5.75 V; 0.5-mA load current	ADREF – 0.5 + V <sub>oxm</sub>		V
4.2.4a	V <sub>Oa</sub>	Nominal output voltage level, negative ox swing	Normal voltage operation, VS ≥ 5.75 V; 0.5-mA load current		0.5	V
4.2.4b	V <sub>Oa</sub>	Nominal output voltage level 2, positive ox swing	Normal voltage operation, VS ≥ 5.75 V; 10- $\mu$ A load current	ADREF – 0.06 + V <sub>oxm</sub>		V
4.2.4c	V <sub>Oa</sub>	Nominal output voltage level 2, negative ox swing	Normal voltage operation, VS ≥ 5.75 V; 10- $\mu$ A load current		0.09	V
4.2.5	V <sub>Ob</sub>	Output voltage level during low voltage operation, positive ox swing	Low voltage operation, 4.75 V ≤ VS < 5.75 V; 0.5-mA load current	VS – 1.25; ADREF – 0.5 + V <sub>oxm</sub>		V
4.2.5a	V <sub>Ob</sub>	Output voltage level during low voltage operation, negative ox swing	Low voltage operation, 4.75 V ≤ VS < 5.75 V; 0.5-mA load current		0.5	V

(1) Product life time depends on VS voltage, PCB thermal design, modulation scheme, and motor operation time. The product is designed for 12-V and 24-V battery system.

(2) Ensured by characterization.

(3) ADREF / VDDIO overvoltage and undervoltage is set by RVSET.

## Electrical Characteristics (continued)

over operating temperature  $T_J = -40^\circ\text{C}$  to  $150^\circ\text{C}$  and recommended operating conditions,  $VS = 4.75\text{ V}$  to  $40\text{ V}^{(1)}$ ,  $f_{\text{PWM}} < 20\text{ kHz}$  (unless otherwise noted)

POS	PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
4.2.5b	$V_{\text{Ob}}$	Output voltage level during low voltage operation 2, positive $\text{o}_x$ swing Low voltage operation, $4.75\text{ V} \leq VS < 5.75\text{ V}$ ; $10\text{-}\mu\text{A}$ load current	VS – 0.75; ADREF – 0.06 + $V_{\text{oxm}}$			V
4.2.5c	$V_{\text{Ob}}$	Output voltage level during low voltage operation 2, negative $\text{o}_x$ swing Low voltage operation, $4.75\text{ V} \leq VS < 5.75\text{ V}$ ; $10\text{-}\mu\text{A}$ load current			0.09	V
4.2.6	GBP	Gain bandwidth product GBP $0.5\text{ V} \leq O_1/2/3 \leq 4.5\text{ V}$ , capacitor load = 25 pF, specified by design.		5		MHz
4.2.8	G1	Gain 1 SPI configurable, Normal voltage operation, $VS \geq 5.75\text{ V}$ ; 0.5-mA load current	7.896	8	8.096	V/V
4.2.9	G2	Gain 2 SPI configurable, Normal voltage operation, $VS \geq 5.75\text{ V}$ ; 0.5-mA load current	11.856	12	12.144	V/V
4.2.10	G3	Gain 3 SPI configurable, Normal voltage operation, $VS \geq 5.75\text{ V}$ ; 0.5-mA load current	15.808	16	16.192	V/V
4.2.11	G4	Gain 4 SPI configurable, Normal voltage operation, $VS \geq 5.75\text{ V}$ ; 0.5-mA load current	31.616	32	32.384	V/V

## 7 Detailed Description

### 7.1 Overview

The DRV3205-Q1 is designed to control 3-phase brushless DC motors in automotive applications using pulse-width modulation. Three high-side and three low-side gate drivers can be switched individually with low propagation delay. The input logic prevents simultaneous activation of the high-side and low-side driver of the same channel. A configuration and status register can be accessed through a SPI communication interface.

### 7.2 Functional Block Diagram

Copyright © 2016, Texas Instruments Incorporated

(1) x = 1, 2, 3

(2) y = 1, 2, 3

(3) An external reference voltage (VCC5 or VCC3) cannot be used for ADREF voltage.

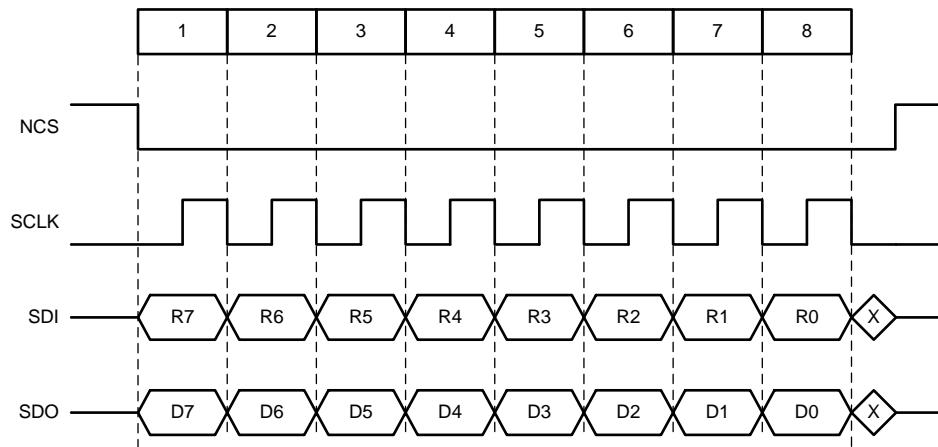

## 7.3 Programming

### 7.3.1 SPI

The SPI slave interface is used for serial communication with the external SPI master (external MCU). The SPI communication starts with the NCS falling edge and ends with NCS rising edge. The NCS high level keeps the SPI slave interface in reset state, and the SDO output in tri-state.

#### 7.3.1.1 Address Mode Transfer

The address mode transfer is an 8-bit protocol. Both SPI slave and SPI master transmit the MSB first.

NOTE: SPI master (MCU) and SPI slave (DRV3205-Q1) sample received data on the !-falling!-rising SCLK edge and transmit on the !-rising!-falling SCLK edge.

**Figure 6. Single 8-Bit SPI Frame/Transfer**

After the NCS falling edge, the first word of 7 bits are address bits followed by the RW bit. During first address transfer, the device returns the STAT1 register on SDO.

Each complete 8-bit frame will be processed. If NCS goes high before a multiple of 8 bits is transferred, the bits are ignored.

#### 7.3.1.1.1 SPI Address Transfer Phase

**Figure 7. SPI Address Transfer Phase Bits**

Bit	D7	D6	D5	D4	D3	D2	D1	D0
Function	ADDR6	ADDR5	ADDR4	ADDR3	ADDR2	ADDR1	ADDR0	RW

**ADDR [6:0]** Register address

**RW** Read and write access

RW = 0: Read access. The SPI master performs a read access to selected register. During following SPI transfer, the device returns the requested register read value on SDO, and device interprets SDI bits as a next address transfer.

RW = 1: Write access. The master performs a write access on the selected register. The slave updates the register value during next SPI transfer (if followed immediately) and returns the current register value on SDO.

### 7.3.1.2 SPI Data Transfer Phase

**Figure 8. SPI Data Transfer Phase Bits**

Bit	D7	D6	D5	D4	D3	D2	D1	D0
Function	DATA7	DATA6	DATA5	DATA4	ADDR3	DATA2	DATA1	DATA0

**DATA [7:0]** Data value for write access (8-Bit).

Figure 8 shows data value encoding scheme during a write access. Mixing the two access modes (write and read access) during one SPI communication sequence ( $NCS = 0$ ) is possible. The SPI communication can be terminated after single 8-bit SPI transfer by asserting  $NCS = 1$ . Device returns STAT1 register (for the very first SPI transfer after power-up) or current register value that was addressed during SPI Transfer Address Phase.

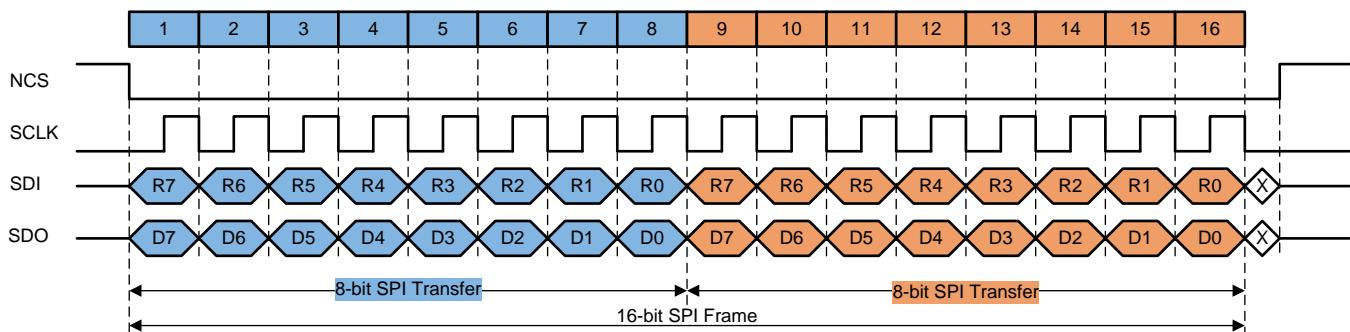

### 7.3.1.3 Device Data Response

**Figure 9. Device Data Response Bits**

Bit	D7	D6	D5	D4	D3	D2	D1	D0
Function	REG7	REG6	REG5	REG4	REG3	REG2	REG1	REG0

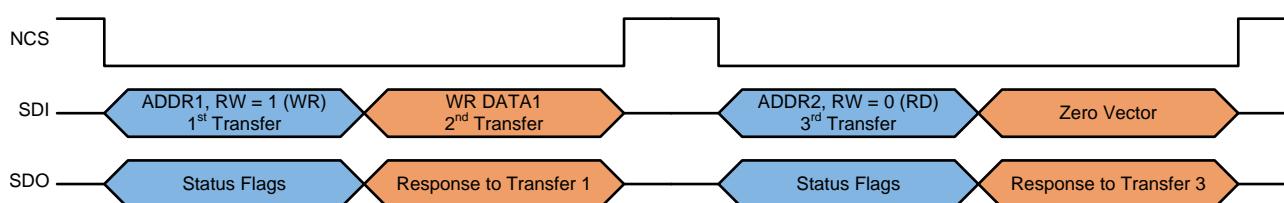

**REG [7:0]** Internal register value. All unused bits are set to 0.

Figure 10 shows a complete 16-bit SPI frame. Figure 11, Figure 12, Figure 13, Figure 14, Figure 15, and Figure 16 show the frame examples.

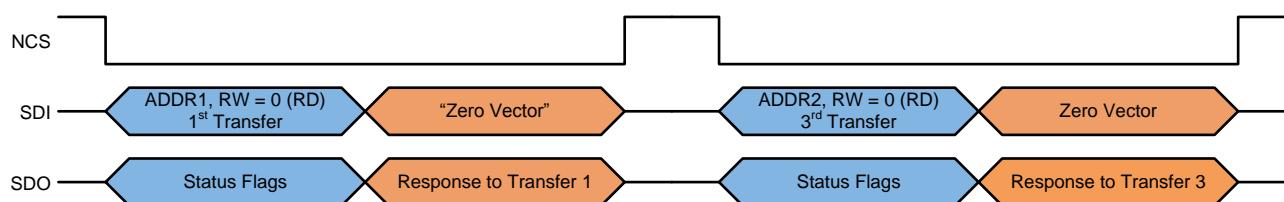

SPI Master (MCU) and SPI slave (DRV3205-Q1) sample received data on the rising SCLK edge, and transmit data on the falling SCLK edge

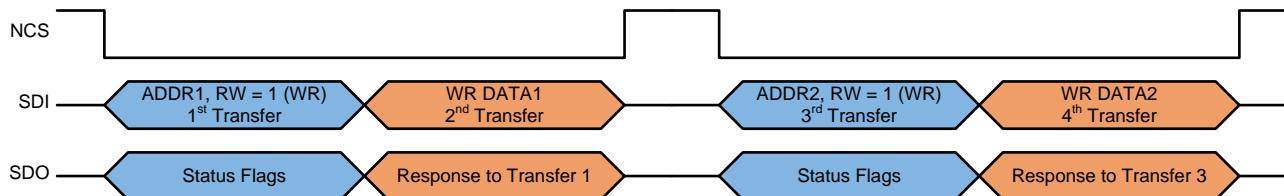

**Figure 10. 16-Bit SPI Frame**

## 8 Application and Implementation

### NOTE

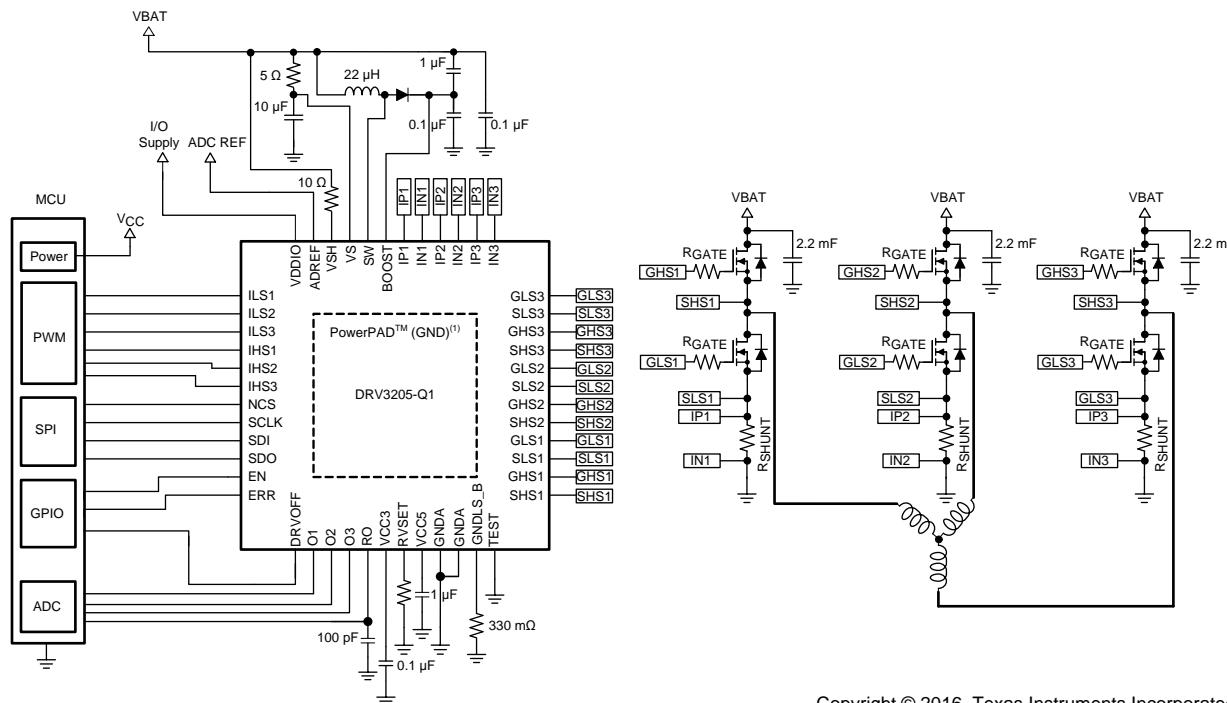

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 8.1 Application Information

The DRV3205-Q1 is a predriver for automotive applications featuring three-phase brushless DC-motor control. Because this device has a boost regulator for charging high-side gates, it can handle gate charges of 250 nC. A boost converter allows full control on the power-stages even for a low battery voltage down to 4.75 V.

### 8.2 Typical Application

#### 8.2.1 Three-Phase Motor Drive-Device for Automotive Application

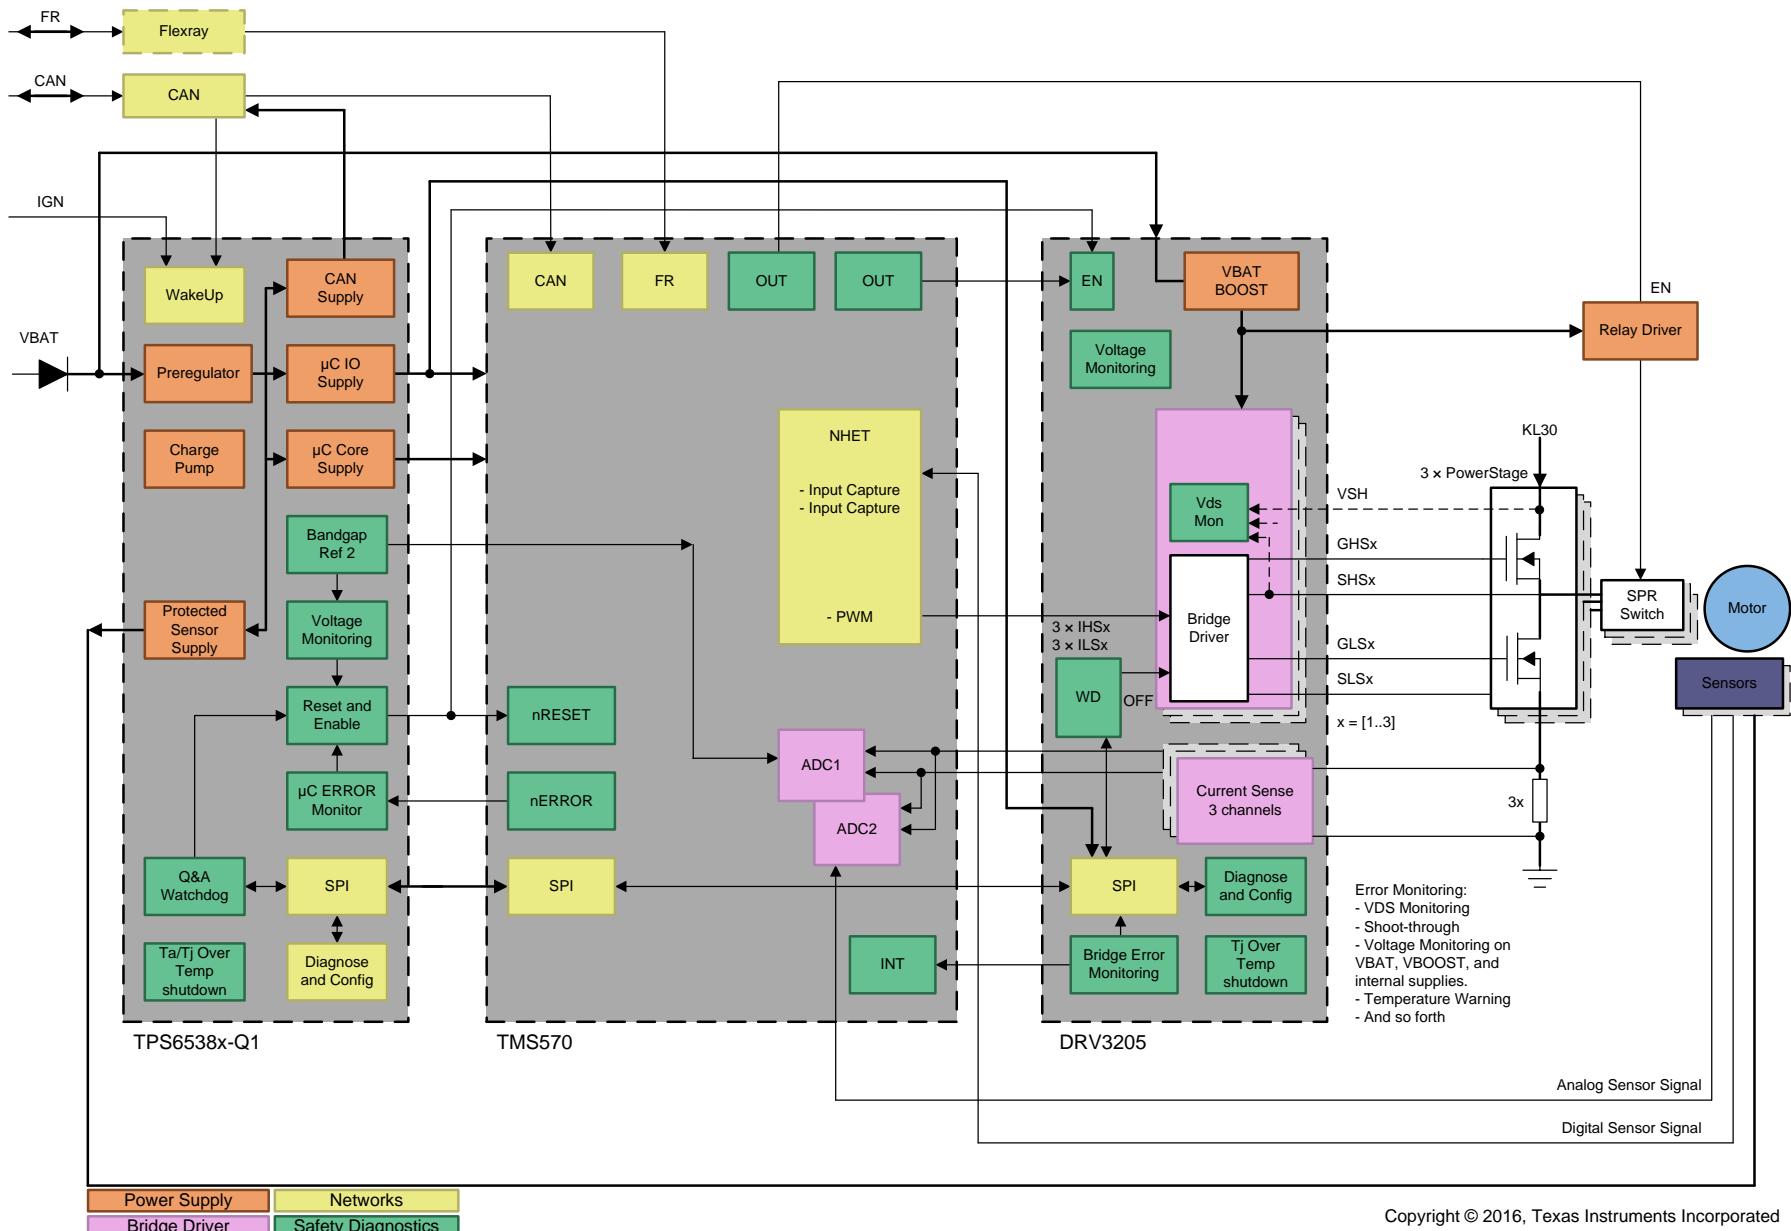

Copyright © 2016, Texas Instruments Incorporated

- (1) This schematic of the DRV3205-Q1 48-pin HTQFP does not provide a true representation of physical pin locations.
- (2) Use same supply from the TPS6538x as the supply used for the MCU IO.
- (3) Resistor not required for reverse protected battery.
- (4) L1 = B82442A1223K000 INDUCTOR, SMT, 22 uH, 10%, 480 mA). The maximum inductor current must be more than VGNDLS\_B / 330 mΩ.
- (5) D1 = SS28 (DIODE, SMT, SCHOTTKY, 80 V, 2 A). A fast recovery diode is recommended.
- (6) QxHS, QxLS = IRFS3004PBF (HEXFET, N-CHANNEL, POWER MOSFET, D2PACK)
- (7) R<sub>shunt1</sub> and R<sub>shunt2</sub> = BVR-Z-R0005 (RES, SMT, 4026, PRECISION POWER, 0.0005 Ω, 1%, 5 W)
- (8) R<sub>gate</sub> = Must be adjust based on system requirement such as EMI, Slew rate, and power

Figure 17. Typical Application Diagram

### 8.3 System Example

Figure 18 shows a typical system example for an electric power-steering system.

**Figure 18. Typical System – Electrical Power Steering Example**

## 9 Power Supply Recommendations

The device is designed to operate from an input voltage supply range of 4.75 V to 40 V. The protection circuit must be placed for protection against reverse supply connection.

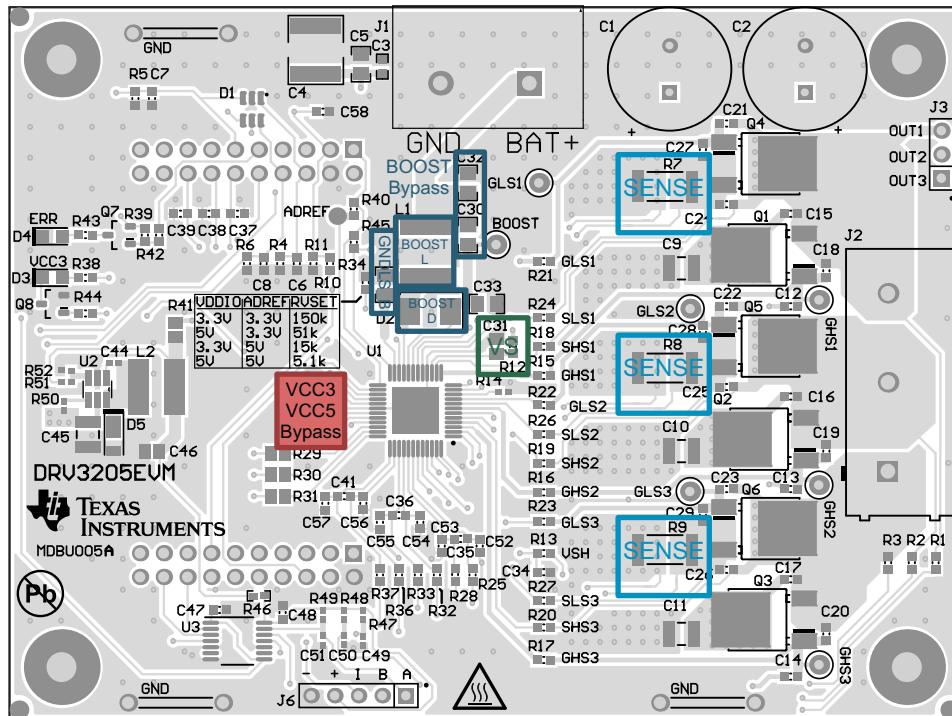

## 10 Layout

### 10.1 Layout Guidelines

Use the following guidelines when designing a PCB for the DRV3205-Q1:

- In addition to the GND pins, the DRV3205-Q1 makes an electrical connection to GND through the PowerPAD. Always check that the PowerPAD has been properly soldered (see *PowerPAD™ Thermally Enhanced Package* [SLMA002]).
- The VS bypass capacitors should be placed close to the power supply terminals. See the VS box in [Figure 19](#).
- Place the VCC3 and VCC5 bypass capacitors close to the corresponding pins with a low impedance path to the ground plane pin (pin 16). See the VCC3 VCC5 bypass box in [Figure 19](#).
- AGND should all be tied to the ground plane through a low impedance trace or copper fill.
- Add stitching vias to reduce the impedance of the GND path from the top to bottom side.
- Try to clear the space around and below the DRV3205-Q1 to allow for better heat spreading from the PowerPAD.
- Route the sense lines, IPx and INx, each with a unique trace, directly to either side of the sense resistor. See the SENSE box in [Figure 19](#).
- Keep the BOOST components close to the device and current loops small. See the BOOST boxes in [Figure 19](#).
- Place the current sense resistors close to the respective low-side FET. See the SENSE box in [Figure 19](#).
- Place the GNDLS\_B resistor close to the device pin. See the GNDLS\_B box in [Figure 19](#).

### 10.2 Layout Example

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

**TI E2E™ Online Community** *TI's Engineer-to-Engineer (E2E) Community.* Created to foster collaboration among engineers. At [e2e.ti.com](http://e2e.ti.com), you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

**Design Support** *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

#### 11.4 商标

PowerPAD, E2E are trademarks of Texas Instruments.

All other trademarks are the property of their respective owners.

#### 11.5 静电放电警告

 ESD 可能会损坏该集成电路。德州仪器 (TI) 建议通过适当的预防措施处理所有集成电路。如果不遵守正确的处理措施和安装程序，可能会损坏集成电路。

 ESD 的损坏小至导致微小的性能降级，大至整个器件故障。精密的集成电路可能更容易受到损坏，这是因为非常细微的参数更改都可能导致器件与其发布的规格不相符。

#### 11.6 Glossary

**SLYZ022 — TI Glossary.**

This glossary lists and explains terms, acronyms, and definitions.

## 12 机械、封装和可订购信息

以下页中包括机械、封装和可订购信息。这些信息是针对指定器件可提供的最新数据。这些数据会在无通知且不对本文档进行修订的情况下发生改变。欲获得该数据表的浏览器版本，请查阅左侧的导航栏。

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
DRV3205QPHPRQ1	ACTIVE	HTQFP	PHP	48	1000	RoHS & Green	NIPDAU	Level-3-260C-168 HR	-40 to 125	DRV32205Q	<b>Samples</b>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

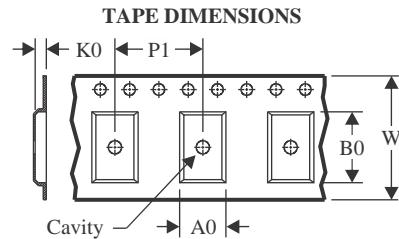

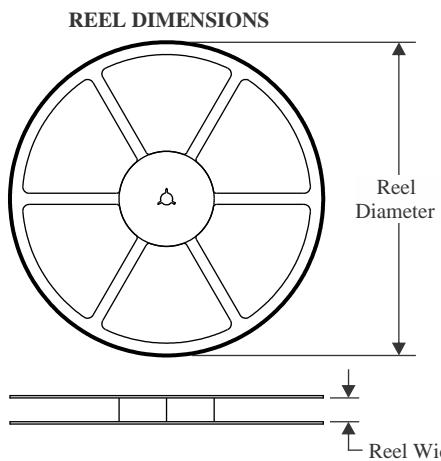

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

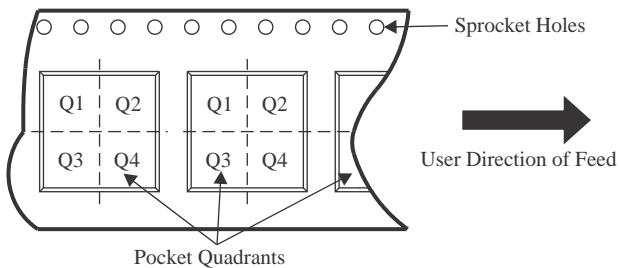

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
