Breakthrough InstaSPIN™-FOC motor control technology is here!

Texas Instruments

InstaSPIN-FOC technology enables designers to identify, tune and fully control any type of three-phase, variable-speed, synchronous or asynchronous motor in just minutes. This new technology removes the need for a mechanical rotor sensor by using TI's new software encoder (sensorless observer) algorithm, FAST™ (flux, angle, speed and torque), embedded in the read-only-memory (ROM) of Piccolo™ microcontrollers. This enables premium solutions that improve motor efficiency, performance and reliability in all variable-speed and variable-load applications.

www.ti.com/instaspin-foc

Field Control
- Weakening allows for the rotor to obtain higher speeds than designed
- Boosting allows for higher torque than designed

Motor ID
- No datasheet required!
- One time parameter identification
- Optional on-line feature can track changes and provide compensation during operation

System Flexibility
- Supports all main 3-ph motor types
- Control torque, speed+torque, angle, and flux
- Full FOC in ROM for simplicity
- Full customization for expert users
- All source besides FAST provided in MotorWare™ software projects and new motor control library

FAST™ Software Encoder
- Universal 3-phase motor sensorless observer
- Encoder-like performance

Control Loop Tuning
- Current PI gains set from motor parameters
  - user may adjust if using ROM
  - or use own controllers
  - MTPA for most motors
- Speed PI gains chosen for evaluation
  - user tuned to meet performance goals
  - or use own controller
- PowerWarp™ Technology
  - optional mode for induction motors
  - minimum current use at all times

PowerWarp™ Technology
14-Month Field Trial

- 80%+ savings vs. Triac
- 45%+ savings vs. standard FOC

www.ti.com/powerwarp

F

Rotor Flux
- High integrity signal for stable field control

A

Rotor Angle
- Locks within one electrical cycle of rotation
- Stable through zero
- Robust under dynamics
- Recovery after stall events

S

Rotor Speed
- Mechanical and electrical speed estimations
- Near zero phase lag

T

Rotor Torque
- Accurate for load monitoring, flow rate, unbalanced load, motor diagnostics

FAST™ Software Encoder (Sensorless Observer)

- Universal 3-phase motor software encoder supports
  - Synchronous (BLDC, SPM, IPM)
  - Asynchronous (ACI) motors
  - Unique, high-quality feedback signals for use in control systems
- Performance
  - Tracks below 1 Hz
  - Tracks through zero on speed reversals
  - Stable feedback to control system when rotor is at zero speed
- Motor parameters
  - Relies on fewer parameters than other observers
  - Off-line commissioning learns the needed electrical motor parameters
  - Optional on-line observer tracks parameter changes to ensure estimation accuracy over time and temperature
- Tuning
  - No tuning of the observer required

Included in ROM on select Piccolo™ MCUs, with software API

InstaSPIN FOC

- FAST is always called from ROM
- Full InstaSPIN-FOC system (torque or speed+torque) may be called from ROM
- Source also provided for FOC to call from user memory
- Any custom system may be developed using feedback from FAST

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
