

DRV5013-Q1 Automotive, Digital-Latch Hall Effect Sensor

1 Features

- AEC-Q100 qualified for automotive applications:
 - DRV5013xxQ grade 1: $T_A = -40^\circ\text{C}$ to 125°C (see [Device Nomenclature](#))
 - DRV5013xxE grade 0: $T_A = -40^\circ\text{C}$ to 150°C (see [Device Nomenclature](#))
- Digital bipolar-latch Hall sensor
- Superior temperature stability
 - $B_{OP} \pm 10\%$ over temperature
- Multiple sensitivity options (B_{OP} / B_{RP})
 - $\pm 1.3\text{ mT}$ (FA, see [Device Nomenclature](#))
 - $\pm 2.7\text{ mT}$ (AD, see [Device Nomenclature](#))
 - $\pm 6\text{ mT}$ (AG, see [Device Nomenclature](#))
 - $\pm 12\text{ mT}$ (BC, see [Device Nomenclature](#))
- Supports a wide voltage range
 - 2.7 V to 38 V
 - No external regulator required
- Open-drain output (30-mA sink)
- Fast 35- μs power-on time
- Small package and footprint
 - Surface mount 3-pin SOT-23 (DBZ)
 - 2.92 mm \times 2.37 mm
 - Through-hole 3-pin TO-92 (LPG)
 - 4.00 mm \times 3.15 mm

• Protection features:

- Reverse supply protection (up to -22 V)
- Supports up to 40-V load dump
- Output short-circuit protection
- Output current limitation
- OUT short to battery protection

2 Applications

- Power tools
- Flow meters
- Valve and solenoid status
- Brushless dc motors
- Proximity sensing
- Tachometers

3 Description

The DRV5013-Q1 device is a chopper-stabilized Hall effect sensor that offers a magnetic sensing solution with superior sensitivity stability over temperature and integrated protection features.

The magnetic field is indicated through a digital bipolar latch output. The IC has an open-drain output stage with 30-mA current sink capability. A wide operating voltage range from 2.7 V to 38 V with reverse polarity protection up to -22 V makes the device suitable for a wide range of automotive applications.

Internal protection functions are provided for reverse supply conditions, load dump, and output short circuit or overcurrent.

Package Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
DRV5013-Q1	SOT-23 (3)	2.92 mm \times 1.30 mm
	TO-92 (3)	4.00 mm \times 3.15 mm

(1) For all available packages, see the package option addendum at the end of the data sheet.

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision H (August 2018) to Revision I (February 2023)	Page
• Updated the numbering format for tables, figures, and cross-references throughout the document	1
• Changed table title from: Device Information to: Package Information	1
• Moved the <i>Power Supply Recommendations</i> and <i>Layout</i> sections to the <i>Application and Implementation</i> section	18
Changes from Revision G (October 2017) to Revision H (August 2018)	Page
• Changed <i>Power Supply Recommendations</i> section	18
Changes from Revision F (September 2016) to Revision G (October 2017)	Page
• Changed location of automotive-specific Features bullets to top of Features section	1
• Added device HBM and CDM classification sub-bullets to automotive-specific <i>Features</i> bullet	1
• Added last sentence to <i>Device Functional Modes</i> section	14
Changes from Revision E (August 2016) to Revision F (September 2016)	Page
• Made changes to the Power-on time in the <i>Electrical Characteristics</i> table.....	5
Changes from Revision D (June 2016) to Revision E (August 2016)	Page
• Revised preliminary limits for FA version in the <i>Magnetic Characteristics</i> table.....	6
• Added the <i>Layout</i> section.....	18
Changes from Revision C (May 2016) to Revision D (June 2016)	Page
• Revised preliminary limits for the FA version.....	6
Changes from Revision B (February 2016) to Revision C (May 2016)	Page
• Revised preliminary limits for the FA version	6
Changes from Revision A (December 2015) to Revision B (February 2016)	Page
• Added the FA device option.....	1
• Added the typical bandwidth value to the <i>Magnetic Characteristics</i> table.....	6

Changes from Revision * (December 2014) to Revision A (June 2015)	Page
• Corrected body size of SOT-23 package and SIP package name to TO-92	1
• Added B_{MAX} to <i>Absolute Maximum Ratings</i>	4
• Removed table notes regarding testing for the operating junction temperature in <i>Absolute Maximum Ratings</i> . 4	
• Added <i>Community Resources</i>	19
• Updated package tape and reel options for M and blank	19

5 Pin Configuration and Functions

For additional configuration information, see [Device Markings](#) and [Mechanical, Packaging, and Orderable Information](#).

Figure 5-1. DBZ Package 3-Pin SOT-23 Top View

Figure 5-2. LPG Package 3-Pin TO-92 Top View

Table 5-1. Pin Functions

PIN			TYPE	DESCRIPTION
NAME	DBZ	LPG		
GND	3	2	Ground	Ground pin
OUT	2	3	Output	Hall sensor open-drain output. The open drain requires a resistor pullup.
V _{CC}	1	1	Power	2.7 V to 38 V power supply. Bypass this pin to the GND pin with a 0.01- μ F (minimum) ceramic capacitor rated for V _{CC} .

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) ⁽¹⁾

		MIN	MAX	UNIT
Power supply voltage	V _{CC}	–22 ⁽²⁾	40	V
	Voltage ramp rate (V _{CC}), V _{CC} < 5 V	Unlimited		
	Voltage ramp rate (V _{CC}), V _{CC} > 5 V	0	2	V/μs
Output pin voltage		–0.5	40	V
Output pin reverse current during reverse supply condition		0	100	mA
Magnetic flux density, B _{MAX}		Unlimited		
Operating junction temperature, T _J	Q, see Figure 9-1	–40	150	°C
	E, see Figure 9-1	–40	175	
Storage temperature, T _{stg}		–65	150	°C

(1) Operation outside the *Absolute Maximum Ratings* may cause permanent device damage. *Absolute Maximum Ratings* do not imply functional operation of the device at these or any other conditions beyond those listed under *Recommended Operating Conditions*. If used outside the *Recommended Operating Conditions* but within the *Absolute Maximum Ratings*, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.

(2) Specified by design. Only tested to –20 V.

6.2 ESD Ratings

			VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per AEC Q100-002 ⁽¹⁾ HBM ESD classification level 2	±2500	V
		Charged-device model (CDM), per AEC Q100-011 Device HBM ESD classification level C4B	±500	

(1) AEC Q100-002 indicates that HBM stressing shall be in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V _{CC}	Power supply voltage		2.7	38	V
V _O	Output pin voltage (OUT)		0	38	V
I _{SINK}	Output pin current sink (OUT) ⁽¹⁾		0	30	mA
T _A	Operating ambient temperature	Q, see Figure 9-1	–40	125	°C
		E, see Figure 9-1	–40	150	

(1) Power dissipation and thermal limits must be observed.

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		DRV5013-Q1		UNIT
		DBZ (SOT-23)	LPG (TO-92)	
		3 PINS	3 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	333.2	180	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	99.9	98.6	°C/W
R _{θJB}	Junction-to-board thermal resistance	66.9	154.9	°C/W
Ψ _{JT}	Junction-to-top characterization parameter	4.9	40	°C/W
Ψ _{JB}	Junction-to-board characterization parameter	65.2	154.9	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6.5 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
POWER SUPPLIES (V_{CC})						
V _{CC}	V _{CC} operating voltage		2.7	38	38	V
I _{CC}	Operating supply current	V _{CC} = 2.7 V to 38 V, T _A = 25°C	2.7	2.7	3.5	mA
		V _{CC} = 2.7 V to 38 V, T _A = T _{A, MAX} ⁽¹⁾	3	3.5	3.5	
t _{on}	Power-on time	AD, AG, BC versions	35	50	70	μs
		FA version	35	50	70	
OPEN-DRAIN OUTPUT (OUT)						
r _{DS(on)}	FET on-resistance	V _{CC} = 3.3 V, I _O = 10 mA, T _A = 25°C	22	22	50	Ω
		V _{CC} = 3.3 V, I _O = 10 mA, T _A = 125 ⁽¹⁾	36	36	50	
I _{lkg(off)}	Off-state leakage current	Output Hi-Z		1	1	μA
PROTECTION CIRCUITS						
V _{CCR}	Reverse supply voltage		-22	-22	-22	V
I _{OCP}	Overcurrent protection level	OUT shorted V _{CC}	15	30	45	mA

(1) T_{A, MAX} is 125°C for Q Grade 1 devices and 150°C for E Grade 0 devices (see [Figure 9-1](#)).

6.6 Switching Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
OPEN-DRAIN OUTPUT (OUT)						
t _d	Output delay time	B = B _{RP} – 10 mT to B _{OP} + 10 mT in 1 μs	13	25	25	μs
t _r	Output rise time (10% to 90%)	R1 = 1 kΩ, C _O = 50 pF, V _{CC} = 3.3 V	200	200	200	ns
t _f	Output fall time (90% to 10%)	R1 = 1 kΩ, C _O = 50 pF, V _{CC} = 3.3 V	31	31	31	ns

6.7 Magnetic Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT ⁽¹⁾
f_{BW}	Bandwidth ⁽²⁾		20	30		kHz
DRV5013FA: ± 1.3 mT						
B_{OP}	Operate point; see Figure 7-2		-0.6	1.3	3.4	mT
B_{RP}	Release point; see Figure 7-2		-3.4	-1.3	0.6	mT
B_{hys}	Hysteresis; $B_{hys} = (B_{OP} - B_{RP})$		1.2	2.6		mT
B_O	Magnetic offset; $B_O = (B_{OP} + B_{RP}) / 2$		-1.5	0	1.5	mT
DRV5013AD: ± 2.7 mT						
B_{OP}	Operate point; see Figure 7-2		1	2.7	5	mT
B_{RP}	Release point; see Figure 7-2		-5	-2.7	-1	mT
B_{hys}	Hysteresis; $B_{hys} = (B_{OP} - B_{RP})$			5.4		mT
B_O	Magnetic offset; $B_O = (B_{OP} + B_{RP}) / 2$		-1.5	0	1.5	mT
DRV5013AG: ± 6 mT						
B_{OP}	Operate point; see Figure 7-2		3	6	9	mT
B_{RP}	Release point; see Figure 7-2		-9	-6	-3	mT
B_{hys}	Hysteresis; $B_{hys} = (B_{OP} - B_{RP})$			12		mT
B_O	Magnetic offset; $B_O = (B_{OP} + B_{RP}) / 2$		-1.5	0	1.5	mT
DRV5013BC: ± 12 mT						
B_{OP}	Operate point; see Figure 7-2		6	12	18	mT
B_{RP}	Release point; see Figure 7-2		-18	-12	-6	mT
B_{hys}	Hysteresis; $B_{hys} = (B_{OP} - B_{RP})$			24		mT
B_O	Magnetic offset; $B_O = (B_{OP} + B_{RP}) / 2$		-1.5	0	1.5	mT

(1) 1 mT = 10 Gauss.

(2) Bandwidth describes the fastest changing magnetic field that can be detected and translated to the output.

7 Detailed Description

7.1 Overview

The DRV5013-Q1 device is a chopper-stabilized Hall sensor with a digital latched output for magnetic sensing applications. The DRV5013-Q1 device can be powered with a supply voltage between 2.7 V and 38 V, and continuously survives continuous -22 V reverse-battery conditions. The DRV5013-Q1 device does not operate when -22 V to 2.4 V is applied to the V_{CC} pin (with respect to the GND pin). In addition, the device can withstand voltages up to 40 V for transient durations.

The field polarity is defined as follows: a **south pole** near the marked side of the package is a positive magnetic field. A **north pole** near the marked side of the package is a negative magnetic field.

The output state is dependent on the magnetic field perpendicular to the package. A **south pole** near the marked side of the package causes the output to pull low (operate point, B_{OP}), and a **north pole** near the marked side of the package causes the output to release (release point, B_{RP}). Hysteresis is included in between the operate point and the release point therefore magnetic-field noise does not accidentally trip the output.

An external pullup resistor is required on the OUT pin. The OUT pin can be pulled up to V_{CC} , or to a different voltage supply. This allows for easier interfacing with controller circuits.

7.2 Functional Block Diagram

Copyright © 2017, Texas Instruments Incorporated

7.3 Feature Description

7.3.1 Field Direction Definition

Figure 7-1 shows the positive magnetic field defined as a **south pole** near the marked side of the package.

Figure 7-1. Field Direction Definition

7.3.2 Device Output

If the device is powered on with a magnetic field strength between B_{RP} and B_{OP} , then the device output is indeterminate and can either be Hi-Z or Low. If the field strength is greater than B_{OP} , then the output is pulled low. If the field strength is less than B_{RP} , then the output is released.

Figure 7-2. DRV5013-Q1 — $B_{OP} > 0$

7.3.3 Power-On Time

After applying V_{CC} to the DRV5013-Q1 device, t_{on} must elapse before the OUT pin is valid. During the power-up sequence, the output is Hi-Z. A pulse as shown in [Figure 7-3](#) and [Figure 7-4](#) occurs at the end of t_{on} . This pulse can allow the host processor to determine when the DRV5013-Q1 output is valid after start-up. In Case 1 ([Figure 7-3](#)) and Case 2 ([Figure 7-4](#)), the output is defined assuming a constant magnetic field $B > B_{OP}$ and $B < B_{RP}$.

Figure 7-3. Case 1: Power On When $B > B_{OP}$

Figure 7-4. Case 2: Power On When $B < B_{RP}$

If the device is powered on with the magnetic field strength $B_{RP} < B < B_{OP}$, then the device output is indeterminate and can either be Hi-Z or pulled low. During the power-up sequence, the output is held Hi-Z

until t_{on} has elapsed. At the end of t_{on} , a pulse is given on the OUT pin to indicate that t_{on} has elapsed. After t_{on} , if the magnetic field changes such that $B_{OP} < B$, the output is released. Case 3 (Figure 7-5) and Case 4 (Figure 7-6) show examples of this behavior.

Figure 7-5. Case 3: Power On When $B_{RP} < B < B_{OP}$, Followed by $B > B_{OP}$

Figure 7-6. Case 4: Power On When $B_{RP} < B < B_{OP}$, Followed by $B < B_{RP}$

7.3.4 Output Stage

Figure 7-7 shows the DRV5013-Q1 open-drain NMOS output structure, rated to sink up to 30 mA of current. For proper operation, use Equation 1 to calculate the value of pullup resistor R1.

$$\frac{V_{ref\ max}}{30\ mA} \leq R1 \leq \frac{V_{ref\ min}}{100\ \mu A} \quad (1)$$

The size of R1 is a tradeoff between the OUT rise time and the current when OUT is pulled low. A lower current is generally better, however faster transitions and bandwidth require a smaller resistor for faster switching.

In addition, make sure that the value of $R1 > 500\ \Omega$ so that the output driver can pull the OUT pin close to GND.

Note

V_{ref} is not restricted to V_{CC} . The allowable voltage range of this pin is specified in the [Absolute Maximum Ratings](#).

Figure 7-7. NMOS Open-Drain Output

Select a value for C2 based on the system bandwidth specifications as shown in [Equation 2](#).

$$2 \times f_{BW} \text{ (Hz)} < \frac{1}{2\pi \times R1 \times C2} \quad (2)$$

Most applications do not require this C2 filtering capacitor.

7.3.5 Protection Circuits

The DRV5013-Q1 device is fully protected against overcurrent and reverse-supply conditions. [Table 7-1](#) lists a summary of the protection circuits.

Table 7-1. Protection Circuit Summary

FAULT	CONDITION	DEVICE	DESCRIPTION	RECOVERY
FET overload (OCP)	$I_{SINK} \geq I_{OCP}$	Operating	Output current is clamped to I_{OCP}	$I_O < I_{OCP}$
Load dump	$38 \text{ V} < V_{CC} < 40 \text{ V}$	Operating	Device will operate for a transient duration	$V_{CC} \leq 38 \text{ V}$
Reverse supply	$-22 \text{ V} < V_{CC} < 0 \text{ V}$	Disabled	Device will survive this condition	$V_{CC} \geq 2.7 \text{ V}$

7.3.5.1 Overcurrent Protection (OCP)

An analog current-limit circuit limits the current through the FET. The driver current is clamped to I_{OCP} . During this clamping, the $r_{DS(on)}$ of the output FET is increased from the nominal value.

7.3.5.2 Load Dump Protection

The DRV5013-Q1 device operates at DC V_{CC} conditions up to 38 V nominally, and can additionally withstand $V_{CC} = 40 \text{ V}$. No current-limiting series resistor is required for this protection.

7.3.5.3 Reverse Supply Protection

The DRV5013-Q1 device is protected in the event that the V_{CC} pin and the GND pin are reversed (up to -22 V).

Note

In a reverse supply condition, the OUT pin reverse-current must not exceed the ratings specified in the [Absolute Maximum Ratings](#).

7.4 Device Functional Modes

The DRV5013-Q1 device is active only when V_{CC} is between 2.7 V and 38 V.

When a reverse supply condition exists, the device is inactive. With regard to some industry standards that require analyzing every possible output from a device, an internal clock is unlikely to couple to the output.

8 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

8.1 Application Information

The DRV5013-Q1 device is used in magnetic-field sensing applications.

8.2 Typical Applications

8.2.1 Standard Circuit

Figure 8-1. Typical Application Circuit

8.2.1.1 Design Requirements

For this design example, use the parameters listed in [Table 8-1](#) as the input parameters.

Table 8-1. Design Parameters

DESIGN PARAMETER	REFERENCE	EXAMPLE VALUE
Supply voltage	V_{CC}	3.2 to 3.4 V
System bandwidth	f_{BW}	10 kHz

8.2.1.2 Detailed Design Procedure

Table 8-2. External Components

COMPONENT	PIN 1	PIN 2	RECOMMENDED
C1	V_{CC}	GND	A 0.01- μ F (minimum) ceramic capacitor rated for V_{CC}
C2	OUT	GND	Optional: Place a ceramic capacitor to GND
R1	OUT	REF ⁽¹⁾	Requires a resistor pullup

(1) REF is not a pin on the DRV5013-Q1 device, but a REF supply-voltage pullup is required for the OUT pin; the OUT pin may be pulled up to V_{CC} .

8.2.1.2.1 Configuration Example

In a 3.3-V system, $3.2 \text{ V} \leq V_{\text{ref}} \leq 3.4 \text{ V}$. Use [Equation 3](#) to calculate the allowable range for R1.

$$\frac{V_{\text{ref}} \text{ max}}{30 \text{ mA}} \leq R1 \leq \frac{V_{\text{ref}} \text{ min}}{100 \mu\text{A}} \quad (3)$$

For this design example, use [Equation 4](#) to calculate the allowable range of R1.

$$\frac{3.4 \text{ V}}{30 \text{ mA}} \leq R1 \leq \frac{3.2 \text{ V}}{100 \mu\text{A}} \quad (4)$$

Therefore:

$$113 \Omega \leq R1 \leq 32 \text{ k}\Omega \quad (5)$$

After finding the allowable range of R1 ([Equation 5](#)), select a value between 500 Ω and 32 k Ω for R1.

Assuming a system bandwidth of 10 kHz, use [Equation 6](#) to calculate the value of C2.

$$2 \times f_{\text{BW}} \text{ (Hz)} < \frac{1}{2\pi \times R1 \times C2} \quad (6)$$

For this design example, use [Equation 7](#) to calculate the value of C2.

$$2 \times 10 \text{ kHz} < \frac{1}{2\pi \times R1 \times C2} \quad (7)$$

An R1 value of 10 k Ω and a C2 value less than 820 pF satisfy the requirement for a 10-kHz system bandwidth.

A selection of R1 = 10 k Ω and C2 = 680 pF would cause a low-pass filter with a corner frequency of 23.4 kHz.

8.2.1.3 Application Curves

Figure 8-2. 10-kHz Switching Magnetic Field

Figure 8-3. 10-kHz Switching Magnetic Field

Figure 8-4. Low-Pass Filtering

8.2.2 Alternative Two-Wire Application

For systems that require minimal wire count, the device output can be connected to V_{CC} through a resistor, and the total supplied current can be sensed near the controller.

Figure 8-5. 2-Wire Application

Current can be sensed using a shunt resistor or other circuitry.

8.2.2.1 Design Requirements

Table 8-3 lists the related design parameters.

Table 8-3. Design Parameters

DESIGN PARAMETER	REFERENCE	EXAMPLE VALUE
Supply voltage	V_{CC}	12 V
OUT resistor	R1	1 kΩ
Bypass capacitor	C1	0.1 μF
Current when $B < B_{RP}$	$I_{RELEASE}$	About 3 mA
Current when $B > B_{OP}$	$I_{OPERATE}$	About 15 mA

8.2.2.2 Detailed Design Procedure

When the open-drain output of the device is high-impedance, current through the path equals the I_{CC} of the device (approximately 3 mA).

When the output pulls low, a parallel current path is added, equal to $V_{CC} / (R1 + r_{DS(on)})$. Using 12 V and 1 k Ω , the parallel current is approximately 12 mA, making the total current approximately 15 mA.

The local bypass capacitor C1 should be at least 0.1 μ F, and a larger value if there is high inductance in the power line interconnect.

8.3 Power Supply Recommendations

The DRV5013-Q1 device is designed to operate from an input voltage supply (VM) range between 2.7 V and 38 V. A 0.01- μ F (minimum) ceramic capacitor rated for V_{CC} must be placed as close to the DRV5013-Q1 device as possible. Larger values of the bypass capacitor may be needed to attenuate any significant high-frequency ripple and noise components generated by the power source. TI recommends limiting the supply voltage variation to less than 50 mV_{PP}.

8.4 Layout

8.4.1 Layout Guidelines

The bypass capacitor should be placed near the DRV5013-Q1 device for efficient power delivery with minimal inductance. The external pullup resistor should be placed near the microcontroller input to provide the most stable voltage at the input; alternatively, an integrated pullup resistor within the GPIO of the microcontroller can be used.

Generally, using PCB copper planes underneath the DRV5013-Q1 device has no effect on magnetic flux, and does not interfere with device performance. This is because copper is not a ferromagnetic material. However, If nearby system components contain iron or nickel, they may redirect magnetic flux in unpredictable ways.

9.5 Electrostatic Discharge Caution

 This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

9.6 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

10 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package Pins	Package qty Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PACKAGE OUTLINE

DBZ0003A

SOT-23 - 1.12 mm max height

SMALL OUTLINE TRANSISTOR

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC registration TO-236, except minimum foot length.
4. Support pin may differ or may not be present.
5. Body dimensions do not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.25mm per side
