LMG210xR0xx 100V GaN Half-Bridge Power Stage With Integrated Protection and Smart-Switching Features

1 Features

- GaN half bridge power stage with integrated driver: 100V (GaN FET options: 2.2mΩ, 4.4mΩ)
- Efficient and high-density power conversion with
  - Ultra-low propagation delay (20ns) and matching (2ns)
  - Independent turn-on and turn-off slew-rate control for both the GaN FETs
  - Zero-voltage detection (ZVD) reporting for dead-time optimization
  - Ideal diode mode (IDM) to reduce third quadrant losses in soft switching application
- Input control flexibility
  - Independent input mode (IIM) control
  - Single PWM input with resistor programmable dead time option for IO-limited controllers
- Robust protection
  - Interlock protection in IIM mode (LMG2104)
  - Internal bootstrap supply voltage regulation to prevent GaN FET overdrive
  - V_{DS} monitoring based cycle-by-cycle short-circuit protection
  - Fault indication for over-temperature, supply under-voltage and short-circuit events
- External bias power supply: 5V
  - Supports 3.3V and 5V input logic levels
- Parasitic optimized QFN package with exposed top pad to support top-side cooling

2 Applications

- Server PSU and BBU
- Telecom power
- Energy infrastructure
- Motor drives
- Class-D audio amplifiers

3 Description

The LMG210xR0xx device is a family of 100V half-bridge power stages, with integrated gate-driver and enhancement-mode gallium nitride (GaN) FETs. The devices consist of a high-frequency GaN FET driver in a half-bridge configuration, that drives two 100V GaN FETs.

GaN FETs provide significant advantages for power conversion as GaN FETs have zero reverse recovery and very small input capacitance (C_{ISS}) and output capacitance (C_{OSS}). All the devices are mounted on a completely bond-wire free package platform with minimized package parasitic elements, which can be easily mounted on PCBs.

The TTL logic compatible inputs support 3.3V and 5V logic levels, regardless of the VCC voltage. A proprietary bootstrap voltage control technique regulates the gate voltages of the enhancement mode GaN FETs within the safe operating range. The device extends advantages of discrete GaN FETs by offering a more user-friendly interface. The device is an excellent option for applications requiring high-frequency, high-efficiency operation in a small form factor.

Device Information

PART NUMBER(3)	PACKAGE(1)	PACKAGE SIZE(2)
LMG210xR022	VBN (VQFN-FCRLF, 18)	7mm × 4.5mm
LMG210xR044	RAR (VQFN-FCRLF, 17)	5.5mm × 4.5mm

(1) For more information, see Section 7.
(2) The package size (length × width) is a nominal value and includes pins, where applicable.
(3) See the *Device Comparison Tables*.

5 Device and Documentation Support

5.1 Documentation Support

5.1.1 Related Documentation

- Texas Instruments, *Layout Considerations for LMG5200 GaN Power Stage* application note
- Texas Instruments, *Using the LMG5200: GaN Half-Bridge Power Stage EVM* user's guide

5.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

5.3 Support Resources

TI E2E™ support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

5.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.
All trademarks are the property of their respective owners.

5.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

5.6 Glossary

TI Glossary — This glossary lists and explains terms, acronyms, and definitions.

XLMG2104R044RARR	Active	Preproduction	VQFN-FCRLF (RAR) | 17	2500 | LARGE T&R	-	Call TI	Call TI	-40 to 150	

[1] **Status:** For more details on status, see our product life cycle.

[2] **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

[3] **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

[4] **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

[5] **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

[6] **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
