| 20    | GLOBAL_PU_VAL   | R/W  | 0h    | Specifies the pull resistor direction applied to all IOs when global_pi_ctl is 3'b111. Only meaningful when global_pi_val is 0 (pull enabled).<br>0 - Pull-down resistor selected.<br>1 - Pull-up resistor selected.                 |
| 19    | GLOBAL_PI_VAL   | R/W  | 0h    | Specifies the pull resistor enable state applied to all IOs when global_pi_ctl is 3'b111.<br>0 - Pull resistor enabled.<br>1 - Pull resistor disabled.                                                                               |
| 18:16 | GLOBAL_PI_CTL   | R/W  | 0h    | Controls the pull resistor override for all IOs. Write 3'b111 to apply global_pi_val and global_pu_val globally to every IO. Any other value defers control to each IO's individual PADCFG.PI register.                              |
| 15:12 | RESERVED        | NONE | 0h    | Reserved                                                                                                                                                                                                                             |
| 11    | GLOBAL_OE_N_VAL | R/W  | 0h    | Controls the output enable (OE, active-low) override for all IOs. Write 3'b111 to apply global_oe_n_val globally to the GZ pin of every IO. Any other value defers control to each IO's individual PADCFG.OE_OVERRIDE_CTRL register. |

**Table 2-2089. IOMUX\_PADGLBL\_CFG\_REG Register Field Descriptions (continued)**

| Bit  | Field           | Type | Reset | Description                                                                                                                                                                                                                                                                                                                                                                                  |
|------|-----------------|------|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10:8 | GLOBAL_OE_N_CTL | R/W  | 0h    | Controls the output enable (OE, active-low) override for all IOs. Write 3'b111 to apply global_oe_n_val globally to the GZ pin of every IO. Any other value defers control to each IO's individual PADCFG.OE_OVERRIDE_CTRL register.                                                                                                                                                         |
| 7:4  | RESERVED        | NONE | 0h    | Reserved                                                                                                                                                                                                                                                                                                                                                                                     |
| 3    | GLOBAL_IE_N_VAL | R/W  | 0h    | Specifies the input enable state applied to all IOs when GLOBAL_IE_N_CTL is 3'b111. Has no effect when global_ie_n_ctl is not 3'b111; in that case, the HW peripheral or per-pad PADCFG register controls the input buffer directly.<br>0 - Input buffer enabled; the HW peripheral actively drives the pad.<br>1 - Input buffer tristated (Hi-Z); the HW peripheral does not drive the pad. |
| 2:0  | GLOBAL_IE_N_CTL | R/W  | 0h    | Controls the input enable (IE) override for all IOs. Write 3'b111 to apply global_ie_n_val globally to the IE pin of every IO. Any other value defers control to each IO's individual PADCFG.IE_OVERRIDE_CTRL register.                                                                                                                                                                      |

## 2.4.2.167 IOMUX\_IO\_CFG\_KICK0 Register

### 1 IOMUX\_IO\_CFG\_KICK0 Register (Offset = 298h) [reset = 0h]

KICK0 config register.

| 31    | PLL_CORE_FRACCTRL_DOWNSPREAD             | R/W  | 0h    | Controls frequency spread<br>0x0 : enables both side frequency spread about the programmed frequency.<br>0x1 : enables low frequency spread only |
| 30:28 | PLL_CORE_FRACCTRL_MODFREQDIVIDEREXPONENT | R/W  | 0h    | Exponent of the REFCLK divider to define the modulation frequency.                                                                               |
| 27:21 | PLL_CORE_FRACCTRL_MODFREQDIVIDERMANТИSSA | R/W  | 0h    | Mantissa of the REFCLK divider to define the modulation frequency                                                                                |
| 20:18 | PLL_CORE_FRACCTRL_DELTAMSTEPINTEGER      | R/W  | 0h    | Integer part of Frequency Spread control                                                                                                         |
| 17:0  | PLL_CORE_FRACCTRL_DELTAMSTEPFRACTION     | R/W  | 0h    | The fraction part of Frequency Spread control                                                                                                    |

### 2.5.2.22 MSS\_TOPRCM\_PLL\_CORE\_STATUS Register

#### 1 MSS\_TOPRCM\_PLL\_CORE\_STATUS Register (Offset = 424h) [reset = E0001141h]

Core PLL status register.

Return to [Summary Table](#)

**Table 2-2160. Instance Table**

| Instance Name | Physical Address |
|---------------|------------------|
| MSS_TOPRCM    | 5320 0424h       |

## 2.6.2 MSS\_RCM Registers

### MSS\_RCM Registers

### 2.6.2.1 MSS\_RCM\_R5SS0\_RST\_STATUS Register

#### 1 MSS\_RCM\_R5SS0\_RST\_STATUS Register (Offset = 10h) [reset = 3h]

R5SS Reset Cause Status register of corresponding R5SS.

| 7:0  | RST_ASSERDLY0_COMMON | R/W  | Fh    | Value decides number of cycles reset should be kept asserted for CR5SS related resets. Programming a value of 0xFF will keep the reset asserted until a new value other than 0xFF is written to this register<br>The actual duration is count + 2 cycles. S/W Recommended value for this is 0x0F<br>The COUNT is applicable to both CPU cores |

### 2.6.2.5 MSS\_RCM\_RST2ASSERTDLY0 Register

#### 1 MSS\_RCM\_RST2ASSERTDLY0 Register (Offset = 20h) [reset = 0h]

This register controls the delay of Reset assertion to the corresponding R5SS.

### 2.6.2.13 MSS\_RCM\_MSS\_MCAN0\_CLK\_SRC\_SEL Register

#### 1 MSS\_RCM\_MSS\_MCAN0\_CLK\_SRC\_SEL Register (Offset = 100h) [reset = 0h]

This Register is used for selecting the clock source for Corresponding root clock.

### 2.6.2.19 MSS\_RCM\_MSS\_RT11\_CLK\_SRC\_SEL Register

#### 1 MSS\_RCM\_MSS\_RT11\_CLK\_SRC\_SEL Register (Offset = 118h) [reset = 0h]

This Register is used for selecting the clock source for Corresponding root clock.

### 2.6.2.30 MSS\_RCM\_MSS\_SPI4\_CLK\_SRC\_SEL Register

#### 1 MSS\_RCM\_MSS\_SPI4\_CLK\_SRC\_SEL Register (Offset = 14Ch) [reset = 0h]

This Register is used for selecting the clock source for Corresponding root clock.

| 11:0  | MSS_SPI2_CLK_DIV_VAL_CLKDIVR | R/W  | 0h    | Divider value Corresponding SPI selected clock. To set the divider value of [n+1] configure the register to value of '0xnnn'. Data should be loaded as multibit.<br>For example: if divider value of '0x9' is required then '0x888' should be configured to the register. |

## 2.6.2.59 MSS\_RCM\_MSS\_SPI3\_CLK\_DIV\_VAL Register

### 1 MSS\_RCM\_MSS\_SPI3\_CLK\_DIV\_VAL Register (Offset = 248h) [reset = 0h]

This Register is used to select the Divider value for respective clk.

| 31:0 | EPWM_CLKSYNC_BIT | R/W  | 0h    | EPWM clock sync for each EPWM instance. Set the bit corresponding to the instance number to enable that EPWM instance. When set, all enabled EPWM module clocks are started with the first rising edge of TBCLK aligned. Refer to TRM for more details.<br>Writing 1'b1 will allow to enable corresponding EPWM instance<br>Writing 1'b0 will disable corresponding EPWM instance. |

### 2.7.2.4 CONTROLSS\_CTRL\_SDFM1\_CLK0\_SEL Register

#### 1 CONTROLSS\_CTRL\_SDFM1\_CLK0\_SEL Register (Offset = 18h) [reset = 0h]

Sdfm1 clock select.
