

DRV8848 Dual H-Bridge Motor Driver

1 Features

- Dual H-Bridge Motor Driver
 - Single/Dual Brushed DC
 - Stepper
- 4 to 18V Operating Supply Voltage Range
- Low ON-resistance: HS + LS = 900mΩ (Typical, 25°C)
- PWM Control Interface
- **Optional Current Regulation With 20μs Fixed Off-Time**
- High Output Current per H-Bridge
 - 2A Maximum Driver Current at 12V and $T_A = 25^\circ\text{C}$
 - Parallel Mode Available Capable of 4A Maximum Driver Current at 12V and $T_A = 25^\circ\text{C}$
- **Low-Current 3μA Sleep Mode**
- Thermally-Enhanced Surface Mount Package
- Protection Features
 - VM Undervoltage Lockout (UVLO)
 - Overcurrent Protection (OCP)
 - Thermal Shutdown (TSD)
 - Fault Condition Indication Pin (nFAULT)

2 Applications

- Appliances
- General Brushed and Stepper Motors
- Printers

3 Description

The DRV8848 provides a dual H-bridge motor driver for home appliances and other mechatronic applications. The device can be used to drive one or two DC motors, a bipolar stepper motor, or other loads. A simple PWM interface allows easy interfacing with controller circuits.

The output block of each H-bridge driver consists of N-channel and P-channel power MOSFETs configured as full H-bridges to drive the motor windings. Each H-bridge includes circuitry to regulate the winding current using a fixed off-time chopping scheme. The DRV8848 is capable of driving up to 2A of current from each output or 4A of current in parallel mode (with proper heat sinking, at 12V and $T_A = 25^\circ\text{C}$).

A low-power sleep mode is provided, which shuts down internal circuitry to achieve very-low quiescent current draw. This sleep mode can be set using a dedicated nSLEEP pin.

Internal protection functions are provided for UVLO, OCP, short-circuit protection and overtemperature. Fault conditions are indicated by a nFAULT pin.

4 Pin Configuration and Functions

Figure 4-1. PWP Package 16-Pin HTSSOP Top View

Pin Functions

PIN		TYPE	DESCRIPTION	
NAME	NO.			
AIN1	16	I	Bridge A input 1	Controls AOUT1; tri-level input
AIN2	15	I	Bridge A input 2	Controls AOUT2; tri-level input
AISEN	3	O	Winding A sense	Connect to current sense resistor for bridge A, or GND if current regulation is not required
AOUT1	2	O	Winding A output	
AOUT2	4			
BIN1	9	I	Bridge B input 1	Controls BOUT1; internal pulldown
BIN2	10	I	Bridge B input 2	Controls BOUT2; internal pulldown
BISEN	6	O	Winding B sense	Connect to current sense resistor for bridge A, or GND if current regulation is not required
BOUT1	7	O	Winding B output	
BOUT2	5			
GND	13 PPAD	PWR	Device ground	Both the GND pin and device PowerPAD intergrated circuit package must be connected to ground
nFAULT	8	OD	Fault indication pin	Pulled logic low with fault condition; open-drain output requires external pullup
nSLEEP	1	I	Sleep mode input	Logic high to enable device; logic low to enter low-power sleep mode; internal pulldown
VINT	14	—	Internal regulator	Internal supply voltage; bypass to GND with 2.2μF, 6.3V capacitor
VM	12	PWR	Power supply	Connect to motor power supply; bypass to GND with a 0.1 and 10μF (minimum) ceramic capacitor rated for VM
VREF	11	I	Full-scale current reference input	Voltage on this pin sets the full scale chopping current; short to VINT if not supplying an external reference voltage

External Components

COMPONENT	PIN 1	PIN 2	RECOMMENDED
C _{VM}	VM	GND	10μF (minimum) ceramic capacitor rated for VM
C _{VM}	VM	GND	0.1μF ceramic capacitor rated for VM
C _{VINT}	VINT	GND	6.3V, 2.2μF ceramic capacitor
R _{nFAULT}	VCC ⁽¹⁾	nFAULT	>1kΩ
R _{AISEN}	AISEN	GND	Sense resistor, see Section 7.2 for sizing
R _{BISEN}	BISEN	GND	Sense resistor, see Section 7.2 for sizing

- (1) VCC is not a pin on the DRV8848, but a VCC supply voltage pullup is required for open-drain output nFAULT; nFAULT can be pulled up to VINT

5 Specifications

5.1 Absolute Maximum Ratings

over operating free-air temperature range referenced with respect to GND (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
	Power supply voltage (VM)	-0.3	20	V
	Power supply voltage ramp rate (VM)	0	2	V/μs
	Internal regulator voltage (VINT)	-0.3	3.6	V
	Analog input pin voltage (VREF)	-0.3	3.6	V
	Control pin voltage (AIN1, AIN2, BIN1, BIN2, nSLEEP, nFAULT)	-0.3	7	V
	Continuous phase node pin voltage (AOUT1, AOUT2, BOUT1, BOUT2)	-0.3	$V_{VM} + 0.6$	V
	Continuous shunt amplifier input pin voltage (AISEN, BISEN) ⁽²⁾	-0.6	0.6	V
	Peak drive current (AOUT1, AOUT2, BOUT1, BOUT2, AISEN, BISEN)	Internally limited		A
T _J	Operating junction temperature	-40	150	°C
T _{stg}	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) Transients of ± 1 V for less than 25 ns are acceptable.

5.2 ESD Ratings Comm

			VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins ⁽¹⁾	±4000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins ⁽²⁾	±1500	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

5.3 Recommended Operating Conditions

		MIN	MAX	UNIT
V _{VM}	Power supply voltage range ⁽¹⁾	4	18	V
V _{VREF}	Reference rms voltage range ⁽²⁾	1	3.3	V
f _{PWM}	Applied INPUT Signal	0	250	kHz
I _{VINT}	VINT external load current		1	mA
I _{rms}	Motor rms current per H-bridge ⁽³⁾	0	1	A
T _A	Operating ambient temperature	-40	85	°C

- (1) Note that R_{DS(ON)} increases and maximum output current is reduced at VM supply voltages below 5V.
- (2) Operational at VREF between 0 and 1V, but accuracy is degraded.
- (3) Power dissipation and thermal limits must be observed.

6 Detailed Description

6.1 Overview

The DRV8848 is an integrated motor driver device for two DC motors or a bipolar stepper motor. The device integrates two H-bridges that use NMOS drivers and current sense regulation circuitry. The DRV8848 can be powered with a supply range between 4 to 18V and is capable of providing an output current of 1A rms.

A simple PWM interface allows easy interfacing to the controller circuit.

The current regulation uses a fixed off-time (t_{OFF}) PWM scheme. The current regulation trip point is controlled by the value of the sense resistor and the voltage applied to VREF.

A low-power sleep mode is included, which allows the system to save power when not driving the motor.

The diagram illustrates the internal architecture of the DRV8834 motor driver. Key components include:

- Power Input:** VM (Motor Supply) with decoupling capacitors (0.1 μF and 10 μF).
- Internal Ref and Regs:** Internal reference and regulation block.
- Logic:** Central logic block interfacing with the internal reference and gate drive.
- Gate Drive and OCP:** Gate drive and overcurrent protection blocks for each motor channel.
- Current Sense (ISEN):** Current sense input for each channel, with an optional ISEN pin.
- Outputs:** AO1, AO2, BO1, BO2 (motor outputs) and AISEN, BISEN (optional current sense outputs).
- Protection:** Over-Temp (over-temperature) protection block.
- Control Inputs:** AIN1, AIN2, BIN1, BIN2 (analog inputs), nSLEEP (sleep input), and nFAULT (fault input).
- Motor Load:** Two step motors connected to the motor outputs (AO1, AO2, BO1, BO2).

6.3 Feature Description

6.3.1 PWM Motor Drivers

DRV8848 contains two identical H-bridge motor drivers with current-control PWM circuitry. Figure 6-1 shows a block diagram of the circuitry.

Figure 6-1. PWM Motor Driver Circuitry

6.3.2 Bridge Control

Table 6-1 shows the logic for the inputs xIN1 and xIN2.

Table 6-1. Bridge Control

xIN1	xIN2	xOUT1	xOUT2	Function (DC Motor)
0	0	Z	Z	Coast (fast decay)
0	1	L	H	Reverse
1	0	H	L	Forward
1	1	L	L	Brake (slow decay)

Note

Pins AIN1 and AIN2 are tri-level, so when the pins are left Hi-Z, the pins are not internally pulled to logic low. When AIN1 or AIN2 are set to Hi-Z and not in parallel mode, the output driver maintains the previous state.

6.3.3 Parallel Operation

The two drivers can be used in parallel to deliver twice the current to a single motor. To enter parallel mode, AIN1 and AIN2 must be left Hi-Z during power-up or when exiting sleep mode (nSLEEP toggling from 0 to 1). BIN1 and BIN2 are used to control the drivers. Tie AISEN and BISEN to a single sense resistor if current control is desired. To exit parallel mode, AIN1 and AIN2 must be driven high or low and the device must be powered-up or exit sleep mode. [Figure 6-2](#) shows a block diagram of the device using parallel mode.

Figure 6-2. Parallel Mode Operation

6.3.4 Current Regulation

The current through the motor windings is regulated by a fixed-off-time PWM current regulation circuit. With DC brushed motors, current regulation can be used to limit the stall current (which is also the startup current) of the motor.

Current regulation works as follows:

When an H-bridge is enabled, current rises through the winding at a rate dependent on the supply voltage and inductance of the winding. If the current reaches the current chopping threshold, the bridge disables the current for a time t_{OFF} before starting the next PWM cycle. Note that immediately after the current is enabled, the voltage on the xISEN pin is ignored for some time (t_{BLANK}) before enabling the current sense circuitry. This blanking time also sets the minimum on-time of the PWM cycle.

The PWM chopping current is set by a comparator which compares the voltage across a current sense resistor, connected to the xISEN pin, with a reference voltage. The reference voltage is derived from the voltage applied to the VREF pin and the voltage is $V_{VREF} / 6.6$. The VREF pin can be tied on board to the 3.3V – VINT pin, or the VREF pin can be externally forced to a desired VREF voltage.

The full scale chopping current in a winding is calculated as follows:

$$I_{FS} = \frac{V_{VREF}}{6.6 \times R_{ISENSE}} \quad (1)$$

where

- I_{FS} is the regulated current.
- V_{VREF} is the voltage on the VREF pin.
- R_{ISENSE} is the resistance of the sense resistor.

Example: If V_{VREF} is 3.3V and a 500mΩ sense resistor is used, the full-scale chopping current is $3.3V / (6.6 \times 500m\Omega) = 1A$.

Note that if the current control is not needed, the xISEN pins can be connected directly to ground. In this case, VREF is connected to VINT.

6.3.5 Current Recirculation and Decay Modes

During PWM current chopping, the H-bridge is enabled to drive current through the motor winding until the PWM current chopping threshold is reached (see case 1 in [Figure 6-3](#)).

After the chopping current threshold is reached, the drive current is interrupted, but due to the inductive nature of the motor, current must continue to flow for some period of time. This is called recirculation current. To handle this recirculation current, the DRV8848 H-bridge operates in mixed decay mode.

Mixed decay is a combination of fast and slow decay modes. In fast decay mode, the opposite drivers are turned on to allow the current to decay (see case 2 in [Figure 6-3](#)). If the winding current approaches zero, while in fast decay, the bridge is disabled to prevent any reverse current flow. In slow decay mode, winding current is recirculated by enabling both of the low-side FETs in the bridge (see case 3 in [Figure 6-3](#)). Mixed decay starts with fast decay, then goes to slow decay. In DRV8848, the mixed decay ratio is 25% fast decay and 75% slow decay (as shown in [Figure 6-4](#)).

Figure 6-3. Decay Modes

Figure 6-4. Mixed Decay

6.3.6 Protection Circuits

The DRV8848 is fully protected against undervoltage, overcurrent, and overtemperature events.

6.3.6.1 OCP

An analog current limit circuit on each FET limits the current through the FET by limiting the gate drive. If this analog current limit persists for longer than the OCP deglitch time t_{OCP} , all FETs in the H-bridge are disabled and the nFAULT pin is driven low. The device remains disabled until the retry time t_{RETRY} occurs. The OCP is independent for each H-bridge.

Overcurrent conditions are detected independently on both high-side and low-side devices; that is, a short to ground, supply, or across the motor winding all result in an OCP event. Note that OCP does not use the current sense circuitry used for PWM current control, so OCP functions even without presence of the xISEN resistors.

6.3.6.2 TSD

If the die temperature exceeds safe limits T_{TSD} , all FETs in the H-bridge are disabled and the nFAULT pin is driven low. After the die temperature has fallen to a safe level, operation automatically resumes. The nFAULT pin is released after operation has resumed.

6.3.6.3 UVLO

If at any time the voltage on the VM pin falls below the UVLO falling threshold voltage, V_{UVLO} , all circuitry in the device is disabled, and all internal logic is reset. Operation resumes when V_{VM} rises above the UVLO rising threshold. The nFAULT pin is driven low during an undervoltage condition and is released after operation has resumed.

Table 6-2. Fault Handling

FAULT	ERROR REPORT	H-BRIDGE	INTERNAL CIRCUITS	RECOVERY
VM undervoltage (UVLO)	nFAULT unlatched	Disabled	Shut down	System and fault clears on recovery
Overcurrent (OCP)	nFAULT unlatched	Disabled	Operating	System and fault clears on recovery and motor is driven after time, t_{RETRY}
Thermal shutdown (TSD)	nFAULT unlatched	Disabled	Operating	System and fault clears on recovery

6.4 Device Functional Modes

The DRV8848 is active unless the nSLEEP pin is brought logic low. In sleep mode, the VINT regulator is disabled and the H-bridge FETs are disabled Hi-Z. Note that t_{SLEEP} must elapse after a falling edge on the nSLEEP pin before the device is in sleep mode. The DRV8848 is brought out of sleep mode automatically if nSLEEP is brought logic high. Note that t_{WAKE} must elapse before the output change state after wake-up.

When V_{VM} falls below the VM UVLO threshold (V_{UVLO}), the output driver, internal logic, and VINT regulator are reset.

Table 6-3. Functional Modes

MODE	CONDITION	H-BRIDGE	VINT
Operating	$4V < V_{VM} < 18V$ nSLEEP pin = 1	Operating	Operating
Sleep	$4V < V_{VM} < 18V$ nSLEEP pin = 0	Disabled	Disabled
Fault	Any fault condition met	Disabled	Depends on fault

7 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

7.1 Application Information

The DRV8848 is used in stepper or brushed DC motor control.

7.2 Typical Application

The user can configure the DRV8848 with the following design procedure.

Figure 7-1. Typical Application Schematic

7.2.1 Design Requirements

Table 7-1 gives design input parameters for system design.

Table 7-1. Design Parameters

DESIGN PARAMETER	REFERENCE	EXAMPLE VALUE
Nominal supply voltage	V_{VM}	12V
Supply voltage range		4 to 18V
Motor winding resistance	R_L	3Ω/phase
Motor winding inductance	L_L	330μH/phase
Target chopping current	I_{CHOP}	500mA
Chopping current reference voltage	V_{VREF}	3.3V

7.2.2 Detailed Design Procedure

7.2.2.1 Current Regulation

The chopping current (I_{CHOP}) is the maximum current driven through either winding. This quantity depends on the sense resistor value (R_{XISEN}).

$$I_{CHOP} = \frac{V_{VREF}}{6.6 \times R_{XISEN}} \quad (2)$$

I_{CHOP} is set by a comparator which compares the voltage across R_{XISEN} to a reference voltage. Note that I_{CHOP} must follow Equation 3 to avoid saturating the motor.

$$I_{CHOP} \text{ (A)} < \frac{V_{VM} \text{ (V)}}{R_L \text{ (}\Omega\text{)} + 2 \times R_{DS(ON)} \text{ (}\Omega\text{)} + R_{XISEN} \text{ (}\Omega\text{)}} \quad (3)$$

where

- V_{VM} is the motor supply voltage.
- R_L is the motor winding resistance.

7.2.3 Application Curves

Figure 7-2. Current Regulation

Figure 7-3. Stepper Mode Operation

7.3 Power Supply Recommendations

The DRV8848 is designed to operate from an input voltage supply (V_{VM}) range between 4 and 18V. Place a 0.1µF ceramic capacitor rated for VM as close to the DRV8848 as possible. In addition, the user must include a bulk capacitor of at least 10µF on VM.

7.3.1 Bulk Capacitance Sizing

Bulk capacitance sizing is an important factor in motor drive system design. Bulk capacitance sizing depends on a variety of factors including:

- Type of power supply
- Acceptable supply voltage ripple
- Parasitic inductance in the power supply wiring
- Type of motor (brushed DC, brushless DC, stepper)
- Motor startup current
- Motor braking method

The inductance between the power supply and motor drive system limits the rate that current can change from the power supply. If the local bulk capacitance is too small, the system responds to excessive current demands or dumps from the motor with a change in voltage. Size the bulk capacitance to meet acceptable voltage ripple levels.

The data sheet provides a recommended minimum value, but system-level testing is required to determine the appropriate-sized bulk capacitor.

Figure 7-4. Setup of Motor Drive System With External Power Supply

7.4 Layout

7.4.1 Layout Guidelines

Bypass the VM terminal to GND using a low-ESR ceramic bypass capacitor with a recommended value of 10 μ F rated for VM. Place this capacitor as close to the VM pin as possible with a thick trace or ground plane connection to the device's GND pin.

Bypass VINT to ground with a ceramic capacitor rated 6.3V. Place this bypassing capacitor as close to the pin as possible.

7.4.2 Layout Example

Figure 7-5. Layout Recommendation

8 Device and Documentation Support

8.1 Third-Party Products Disclaimer

TI'S PUBLICATION OF INFORMATION REGARDING THIRD-PARTY PRODUCTS OR SERVICES DOES NOT CONSTITUTE AN ENDORSEMENT REGARDING THE SUITABILITY OF SUCH PRODUCTS OR SERVICES OR A WARRANTY, REPRESENTATION OR ENDORSEMENT OF SUCH PRODUCTS OR SERVICES, EITHER ALONE OR IN COMBINATION WITH ANY TI PRODUCT OR SERVICE.

8.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

8.3 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

8.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

8.5 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

8.6 Community Resources

8.7 Trademarks

TI E2E™ is a trademark of Texas Instruments.
All trademarks are the property of their respective owners.

9 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision A (November 2015) to Revision B (April 2024)	Page
• Corrected t_F and t_R to denote fall time and rise time respectively.....	4

Changes from Revision * (October 2014) to Revision A (November 2015)	Page
• Corrected lines for Figure 6-1	10
• Added Section 8.6	19

10 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package Pins	Package qty Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
DRV8848PWPR	HTSSOP	PWP	16	2000	330.0	12.4	6.9	5.6	1.6	8.0	12.0	Q1

PWP0016A

PowerPAD™ HTSSOP - 1.2 mm max height

PLASTIC SMALL OUTLINE

4214868/A 02/2017

NOTES:

PowerPAD is a trademark of Texas Instruments.

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
4. Reference JEDEC registration MO-153.
5. Features may not be present.

PWP0016A

PowerPAD™ HTSSOP - 1.2 mm max height

PLASTIC SMALL OUTLINE

4214868/A 02/2017

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.
7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.
8. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature numbers SLMA002 (www.ti.com/lit/slma002) and SLMA004 (www.ti.com/lit/slma004).
9. Size of metal pad may vary due to creepage requirement.

4224559/B 01/2019

NOTES:

PowerPAD is a trademark of Texas Instruments.

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
4. Reference JEDEC registration MO-153.
5. Features may differ or may not be present.

PWP0016C

PowerPAD™ TSSOP - 1.2 mm max height

SMALL OUTLINE PACKAGE

LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE: 10X

SOLDER MASK DETAILS

4224559/B 01/2019

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.
7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.
8. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature numbers SLMA002 (www.ti.com/lit/slma002) and SLMA004 (www.ti.com/lit/slma004).
9. Size of metal pad may vary due to creepage requirement.
10. Vias are optional depending on application, refer to device data sheet. It is recommended that vias under paste be filled, plugged or tented.

EXAMPLE STENCIL DESIGN

PWP0016C

PowerPAD™ TSSOP - 1.2 mm max height

SMALL OUTLINE PACKAGE

STENCIL THICKNESS	SOLDER STENCIL OPENING
0.1	2.75 X 2.58
0.125	2.46 X 2.31 (SHOWN)
0.15	2.25 X 2.11
0.175	2.08 X 1.95

4224559/B 01/2019

NOTES: (continued)

11. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
12. Board assembly site may have different recommendations for stencil design.

IMPORTANT NOTICE AND DISCLAIMER
