

ESD851-Q1 36V Automotive Bidirectional ESD Protection Diode in SOD-323

1 Features

- ISO 10605 (330pF, 330Ω) ESD protection:
 - ±27kV contact discharge
 - ±30kV air gap discharge
- IEC 61000-4-5 surge protection:
 - 6.5A (8/20μs)
 - Clamping voltage: 71V at 6.5A (8/20μs)
- IO Capacitance: 4.3pF (typical)
- Ultra low leakage current: 10nA (maximum)
- ESD clamping voltage: 56V at 16A TLP
- Industrial temperature range: -55°C to +150°C
- AEC-Q101 qualified
- Industry standard SOD-323 leaded package (2.65mm × 1.3mm)

2 Applications

- I/O Protection
- [Body Electronics & Lighting](#)
- [Hybrid, Electric, & Powertrain Systems](#)

3 Description

The ESD851-Q1 is a bidirectional ESD protection diode designed for clamping harmful transients such as ESD and surge. The ESD851-Q1 is rated to dissipate ESD strikes up to ±30kV (contact and air gap discharge), which exceeds the maximum level specified in the IEC 61000-4-2 international standard (Level 4). For surges, the device can clamp 8/20μs surges with peak currents up to 6.5A in accordance with the IEC 61000-4-5 standard.

This device also features a 4.3pF (typical) IO capacitance enabling it to protect data lines. The low dynamic resistance and low clamping voltage provides system level protection against transient events.

The ESD851-Q1 is offered in the industry standard, leaded SOD-323 package to enable easy solderability.

Package Information

PART NUMBER	PACKAGE ⁽¹⁾	PACKAGE SIZE ⁽²⁾
ESD851-Q1	DYF (SOD-323, 2)	2.65mm × 1.3mm

- (1) For more information, see [Section 8](#).
 (2) The package size (length × width) is a nominal value and includes pins, where applicable.

T_{stg}	Storage Temperature	-65	155	°C

- (1) Operation outside the Absolute Maximum Ratings may cause permanent device damage. Absolute maximum ratings do not imply functional operation of the device at these or any other conditions beyond those listed under Recommended Operating Conditions. If briefly operating outside the Recommended Operating Conditions but within the Absolute Maximum Ratings, the device may not sustain damage, but it may not be fully functional. Operating the device in this manner may affect device reliability, functionality, performance, and shorten the device lifetime.
- (2) Voltages are with respect to GND unless otherwise noted.
- (3) Measured at 25°C

5.2 ESD Ratings - AEC Specifications

6.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
