Features

- Single 5-V Supply
- 3-State Driver Output Circuitry
- TTL-Compatible Driver Inputs
- TTL-Compatible Receiver Output
- Differential Line Operation
- Receiver Output Strobe
- Designed for Party-Line (Data-Bus) Applications
- Independent Driver and Receiver
- Choice of Open-Collector or Totem-Pole Outputs on Both Driver and Receiver
- Dual Data Inputs on Driver
- Optional Line-Termination Resistor in Receiver
- ±15-V Receiver Common-Mode Capability
- Receiver Frequency-Response Control

description

This integrated circuit is designed for use in interfacing between TTL-type digital systems and differential data-transmission lines. It is especially useful for party-line (data-bus) applications. This circuit type combines in one package a 3-state differential line driver and a differential-input line receiver, both of which operate from a single 5-V power supply. The driver inputs and the receiver outputs are TTL compatible. The driver employed is similar to the SN55113 and SN75113 3-state line drivers and the receiver is similar to the SN55115 and SN75115 line receivers.

The SN55116 offers all the features of the SN55113 and SN75113 drivers and the SN55115 and SN75115 receivers combined. The driver performs the dual input AND and NAND functions when enabled or presents a high impedance to the load when in the disabled state. The driver output stages are similar to TTL totem-pole outputs, but have the current-sinking portion separated from the current-sourcing portion and both are brought out to adjacent package terminals. This feature allows the user the option of using the driver in the open-collector output configuration or, by connecting the adjacent source and sink terminals together, using the driver in the normal totem-pole output configuration.

The receiver portion of the SN55116 features a differential-input circuit having a common-mode voltage range of ±15 V. An internal 130-Ω equivalent resistor also is provided, which optionally can be used to terminate the transmission line. A frequency-response control terminal allows the user to reduce the speed of the receiver or to improve differential noise immunity. The receiver of the SN55116 has an output strobe and a split totem-pole output. The receiver section of the circuit is independent of the driver section, except for the V_{CC} and ground terminals.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

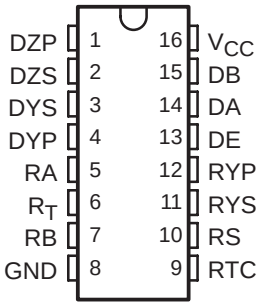

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

Copyright © 2005, Texas Instruments Incorporated
On products compliant to MIL-PRF-38535, all parameters are tested unless otherwise noted. On all other products, production processing does not necessarily include testing of all parameters.

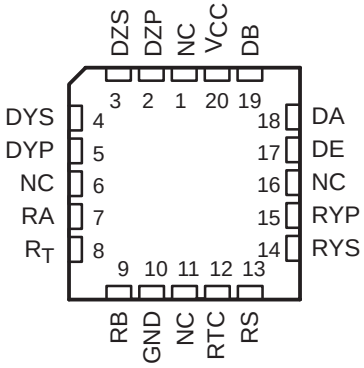

description (continued)

The SN55116 is characterized for operation over the full military temperature range of −55°C to 125°C.

schematics of inputs and outputs

absolute maximum ratings over operating free-air temperature (unless otherwise noted)†

Supply voltage, V_{CC} (see Note 1 and Note 2) . . . . . 7 V
Input voltage, V_I: DA, DB, DE, DI, RE, and RS . . . . . 5.5 V
RA, RB, R_T . . . . . ±25 V
Off-state voltage applied to open-collector outputs: . . . . . 12 V
Continuous total power dissipation (see Note 2) . . . . . See Dissipation Rating Table
Case temperature for 60 seconds, T_C: FK package . . . . . 260°C
Lead temperature 1,6 mm (1/16 inch) from case for 60 seconds: J package . . . . . 300°C
Storage temperature range, T_{stg} . . . . . −65°C to 150°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. All voltage values are with respect to the network ground terminal.
2. In the FK and J packages, the SN55116 chip is alloy mounted.

T_A	Operating free-air temperature		−55		125	°C

electrical characteristics over recommended operating free-air temperature range (unless otherwise noted)

driver section

PARAMETER			TEST CONDITIONS†			MIN	TYP‡	MAX	UNIT
V_{IK}	Input clamp voltage		V_{CC} = MIN,	I_I = −12 mA			−0.9	−1.5	V
V_{OH}	High-level output voltage	V_{CC} = MIN, V_{IL} = 0.8 V, I_{IH} = 2 V	T_A = 25°C	I_{OH} = −10 mA		2.4	3.4		V
				I_{OH} = −40 mA		2	3		
			T_A = −55°C to 125°C	I_{OH} = −10 mA		2			
				I_{OH} = −40 mA		1.8			
V_{OL}	Low-level output voltage		V_{CC} = MIN,	V_{IH} = 2 V, V_{IL} = 0.8 V, I_{OL} = 40 mA				0.4	V
V_{OK}	Output clamp voltage		V_{CC} = MAX,	I_O = −40 mA, DE at 0.8 V				−1.5	V
$I_{O(off)}$	Off-state open-collector output current	V_{CC} = MAX, V_O = 12 V	T_A = 25°C				1	10	µA
			T_A = MAX					200	
I_{OZ}	Off-state (high-impedance state) output current	V_{CC} = MAX,	V_O = 0 to V_{CC}, DE at 0.8 V, T_A = 25°C					±10	µA
		V_{CC} = MAX, DE at 0.8 V, T_A = MAX	V_O = 0					−300	
			V_O = 0.4 V to V_{CC}					±150	
I_I	Input current at maximum input voltage	Driver or enable input	V_{CC} = MAX,	V_I = 5.5 V				1	mA
I_{IH}	High-level input current	Driver or enable input	V_{CC} = MAX,	V_I = 2.4 V				45	µA
I_{IL}	Low-level input current	Driver or enable input	V_{CC} = MAX,	V_I = 0.4 V				−1.6	mA
I_{OS}	Short-circuit output current§		V_{CC} = MAX,	V_O = 0, T_A = 25°C		−40		−120	mA
I_{CC}	Supply current (driver and receiver combined)		V_{CC} = MAX,	T_A = 25°C			42	60	mA

† All parameters, with the exception of off-state open-collector output current, are measured with the active pullup connected to the sink output. For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions.
‡ All typical values are at V_{CC} = 5 V and T_A = 25°C.
§ Not more than one output should be shorted at a time, and duration of the short circuit should not exceed one second.

switching characteristics, V_{CC} = 5 V, C_L = 30 pF, T_A = 25°C

				V_I = 0.4 V,	Other input at 2.4 V		−0.4	−0.7	
				V_I = 2.4 V, Other input at 0.4 V			0.1	0.3	
I_I	Input current at maximum input voltage	Strobe	V_{CC} = MIN, V_{ID} = −0.5 V, V_{strobe} = 4.5 V					5	µA
I_I	Low-level input current	Strobe	V_{CC} = MAX, V_{strobe} = 0.4 V,	V_{ID} = 1 V, See Note 3				−2.4	mA
$I_{(RTC)}$	Response-time-control current (RTC)		V_{CC} = MAX, RC at 0 V,	V_{ID} = 1 V, See Note 3	T_A = 25°C	−1.2			mA
$I_{O(off)}$	Off-state open-collector output current		V_{CC} = MAX, V_O = 12 V, V_{ID} = −1 V	T_A = 25°C			1	10	µA
				T_A = MAX				200	
R_T	Line-terminating resistance		V_{CC} = 5 V	T_A = 25°C		77		167	Ω
I_{OS}	Short-circuit output current§		V_{CC} = MAX, V_{ID} = −0.5 V,	V_O = 0, See Note 3	T_A = 25°C	−15		−80	mA
I_{CC}	Short current (driver and receiver combined)		V_{CC} = MAX, V_{ID} = 0.5 V, See Note 3		T_A = 25°C		42	60	mA

† Unless otherwise noted, V_{strobe} = 2.4 V. All parameters, with the exception of off-state open-collector output current, are measured with the active pullup connected to the sink output. For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions.

‡ All typical values are at V_{CC} = 5 V, T_A = 25°C, and V_{IC} = 0.

§ Differential voltages are at the B input terminal with respect to the A input terminal.

¶ The algebraic convention, where the less positive (more negative) limit is designated as minimum, is used in this data sheet for threshold voltages only.

Input voltage range is the voltage range that, if exceeded at either input, will cause the receiver to cease functioning properly.

NOTES: 3. This applies with the less-positive receiver input grounded.

4. This applies with the more-positive receiver input at 15 V or the more negative receiver input at −15 V.

switching characteristics, V_{CC} = 5 V, C_L = 30 pF, T_A = 25°C

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
