

RAD-TOLERANT CLASS V, DUAL DIFFERENTIAL LINE RECEIVER

FEATURES

- Single 5-V Supply
- Differential Line Operation
- Dual Channels
- TTL Compatibility
- ± 15 -V Common-Mode Input Voltage Range
- ± 15 -V Differential Input Voltage Range
- Individual Channel Strobes
- Built-In Optional Line-Termination Resistor
- Individual Frequency Response Controls
- Designed for Use With Dual Differential Drivers SN55183 and SN75183
- Designed to Be Interchangeable With National Semiconductor DS7820A and DS8820A
- Rad-Tolerant: >40 kRad (Si) ELDRS
- QML-V Qualified, SMD 5962-79008

DESCRIPTION/ORDERING INFORMATION

The SN55182 dual differential line receiver is designed to sense small differential signals in the presence of large common-mode noise. This device gives TTL-compatible output signals as a function of the polarity of the differential input voltage. The frequency response of each channel can be easily controlled by a single external capacitor to provide immunity to differential noise spikes. The output goes to a high level when the inputs are open circuited. A strobe input (STRB) is provided that, when in the low level, disables the receiver and forces the output to a high level.

The receiver is of monolithic single-chip construction, and both halves of the dual circuits use common power-supply and ground terminals.

The SN55182 is characterized for operation over the full military temperature range of -55°C to 125°C .

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

over operating free-air temperature range (unless otherwise noted)

		UNIT
V _{CC}	Supply voltage ⁽²⁾	8 V
V _{IC}	Common-mode input voltage	±20 V
V _{ID}	Differential input voltage ⁽³⁾	±20 V
V _{I(STRB)}	Strobe input voltage	8 V
I _O	Output sink current	50 mA
	Continuous total power dissipation	See Dissipation Rating Table
T _{stg}	Storage temperature range	–65°C to 150°C
	Lead temperature 1,6 mm (1/16 inch) from case for 60 seconds: J or W package	300°C

- The absolute maximum ratings under any condition are limited by the constraints of the silicon process. Stresses above these ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those specified is not implied.
- All voltage values, except differential voltages, are with respect to network ground terminal.
- Differential voltage values are at the noninverting terminal with respect to the inverting terminal.

PARAMETER MEASUREMENT INFORMATION

- A. The pulse generators have the following characteristics: $Z_O = 50\ \Omega$, $t_r \leq 10\ \text{ns}$, $t_f \leq 10\ \text{ns}$, $t_w = 0.5 \pm 0.1\ \mu\text{s}$, $\text{PRR} \leq 1\ \text{MHz}$.
- B. C_L includes probe and jig capacitance.
- C. All diodes are 1N3064 or equivalent.

APPLICATION INFORMATION

NOTES: A. When the inputs are open circuited, the output is high. A capacitor may be used for dc isolation of the line-terminating resistor. At the frequency of operation, the impedance of the capacitor should be relatively small.

Example: let $f = 5 \text{ MHz}$
 $C = 0.002 \mu\text{F}$

$$Z_{(C)} = \frac{1}{2\pi f C} = \frac{1}{2\pi(5 \times 10^6)(0.002 \times 10^{-6})}$$

$$Z_{(C)} \approx 16\Omega$$

B. Use of a capacitor to control response time is optional.

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
