

# WL18x7MOD WiLink™ 8 Dual-Band Industrial Module – Wi-Fi®, Bluetooth®, and Bluetooth Low Energy (LE)

## 1 Features

- General
  - Integrates RF, power amplifiers (PAs), clocks, RF switches, filters, passives, and power management
  - Quick hardware design with TI module collateral and reference designs
  - Operating temperature: –40°C to +85°C industrial temperature grade
  - Small form factor: 13.3mm × 13.4mm × 2mm
  - 100-pin MOC package
  - FCC, IC, ETSI/CE, and TELEC certified with PCB, dipole, chip, and PIFA antennas
- Wi-Fi®
  - WLAN baseband processor and RF transceiver support of IEEE Std 802.11a, 802.11b, 802.11g, and 802.11n
  - 20MHz and 40MHz SISO and 20MHz 2 × 2 MIMO at 2.4GHz for high throughput: 80Mbps (TCP), 100Mbps (UDP)
  - 2.4GHz MRC support for extended range and 5GHz diversity capable
  - Fully calibrated: Production calibration is not required
  - 4-bit SDIO host interface support
  - Wi-Fi direct concurrent operation (multichannel, multirole)
- Bluetooth® and Bluetooth Low Energy: WL1837MOD only
  - Bluetooth 5.1 secure connection compliant and CSA2 support; declaration ID: D052427
  - Host controller interface (HCI) transport for Bluetooth over UART
- Dedicated audio processor support of SBC encoding + A2DP
- Dual-mode Bluetooth and Bluetooth Low Energy
- TI's Bluetooth and Bluetooth Low Energy certified stack
- Key benefits
  - Reduces design overhead
  - Differentiated use cases by configuring WiLink™ 8 simultaneously in two roles (STA and AP) to connect directly with other Wi-Fi devices on different RF channel (Wi-Fi networks)
  - Best-in-class Wi-Fi with high-performance audio and video streaming reference applications with up to 1.4× the range versus one antenna
  - Different provisioning methods for in-home devices' connectivity to Wi-Fi in one step
  - Lowest Wi-Fi power consumption in connected idle (< 800µA)
  - Configurable wake on WLAN filters to only wake up the system
  - Wi-Fi and Bluetooth single antenna coexistence

## 2 Applications

- Internet of things (IoT)
- Multimedia
- Home electronics
- Home appliances and white goods
- Industrial and home automation
- Smart gateway and metering
- Video conferencing
- Video camera and security

## 3 Description

The certified WiLink™ 8 module from TI offers a high throughput and extended range along with Wi-Fi® and Bluetooth® coexistence (WL1837MOD only) in a power-optimized design. The WL18x7MOD is a Wi-Fi, dual-band, 2.4GHz and 5GHz module solution with two antennas supporting industrial temperature grade. The device is FCC, IC, ETSI/CE, and TELEC certified for AP (with DFS support) and client. TI offers drivers for high-level operating systems, such as Linux® and Android™. Additional drivers, such as WinCE and RTOS, which include QNX, Nucleus, ThreadX, and FreeRTOS, are supported through third parties.

- (3) Host must provide PU using a 10kΩ resistor for all non-CLK SDIO signals.

## 7 Specifications

All specifications are measured at the module pins using the TI WL1837MODCOM8I evaluation board. All measurements are performed with  $V_{BAT} = 3.7V$ ,  $V_{IO} = 1.8V$ ,  $25^{\circ}C$  for typical values with matched RF antennas, unless otherwise indicated.

### Note

For level-shifting I/Os with the TI WL18x7MOD, see the [Level Shifting WL18xx I/Os application report](#).

### 7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) <sup>(1)</sup>

	MIN	MAX	UNIT
$V_{BAT}$		4.8 <sup>(2)</sup>	V
$V_{IO}$	-0.5	2.1	V
Input voltage to analog pins	-0.5	2.1	V
Input voltage limits (CLK_IN)	-0.5	VDD_IO	V
Input voltage to all other pins	-0.5	(VDD_IO + 0.5 V)	V
Operating ambient temperature	-40	85 <sup>(3)</sup>	$^{\circ}C$
Storage temperature, $T_{slg}$	-40	85	$^{\circ}C$

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) 4.8V cumulative to 2.33 years, including charging dips and peaks
- (3) In the WL18xx system, a control mechanism exists to ensure  $T_j < 125^{\circ}C$ . When  $T_j$  approaches this threshold, the control mechanism manages the transmitter patterns.

### 7.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$ Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	$\pm 1000$	V
	Charged device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	$\pm 250$	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	TYP	MAX	UNIT	
$V_{BAT}$ <sup>(1)</sup>	DC supply range for all modes	2.9	3.7	4.8	V	
$V_{IO}$	1.8-V I/O ring power supply voltage	1.62	1.8	1.95	V	
$V_{IH}$	I/O high-level input voltage	$0.65 \times VDD\_IO$		VDD_IO	V	
$V_{IL}$	I/O low-level input voltage	0	$0.35 \times VDD\_IO$		V	
$V_{IH\_EN}$	Enable inputs high-level input voltage	1.365		VDD_IO	V	
$V_{IL\_EN}$	Enable inputs low-level input voltage	0		0.4	V	
$V_{OH}$	High-level output voltage	At 4 mA		VDD_IO - 0.45	V	
$V_{OL}$	Low-level output voltage	At 4 mA		0	0.45	V
$T_r, T_f$	Input transitions time $T_r, T_f$ from 10% to 90% (digital I/O) <sup>(2)</sup>	1		10	ns	
$T_r$	Output rise time from 10% to 90% (digital pins) <sup>(2)</sup>	$C_L < 25$ pF		5.3	ns	
$T_f$	Output fall time from 10% to 90% (digital pins) <sup>(2)</sup>	$C_L < 25$ pF		4.9	ns	
	Ambient operating temperature	-40		85	$^{\circ}C$	

### 7.3 Recommended Operating Conditions (continued)

over operating free-air temperature range (unless otherwise noted)

		MIN	TYP	MAX	UNIT
Maximum power dissipation	WLAN operation			2.8	W
	Bluetooth operation			0.2	

- (1) 4.8 V is applicable only for 2.33 years (30% of the time). Otherwise, maximum  $V_{BAT}$  must not exceed 4.3 V.
- (2) Applies to all digital lines except SDIO, UART, I2C, PCM and slow clock lines.

### 7.4 External Digital Slow Clock Requirements

The supported digital slow clock is 32.768kHz digital (square wave). All core functions share a single input.

		CONDITION	MIN	TYP	MAX	UNIT
	Input slow clock frequency		32768			Hz
	Input slow clock accuracy (initial, temperature, and aging)	WLAN, Bluetooth	±250			ppm
$T_r, T_f$	Input transition time (10% to 90%)		200			ns
	Frequency input duty cycle		15%	50%	85%	
$V_{IH}, V_{IL}$	Input voltage limits	Square wave, DC coupled	0.65 × VDD_IO		VDD_IO	$V_{peak}$
			0		0.35 × VDD_IO	
	Input impedance		1			MΩ
	Input capacitance		5			pF

### 7.5 Thermal Resistance Characteristics for MOC 100-Pin Package

THERMAL METRICS <sup>(1)</sup>		(°C/W) <sup>(2)</sup>
$\theta_{JA}$	Junction to free air <sup>(3)</sup>	16.6
$\theta_{JB}$	Junction to board	6.06
$\theta_{JC}$	Junction to case <sup>(4)</sup>	5.13

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics Application Report](#).
- (2) These values are based on a JEDEC-defined 2S2P system (with the exception of the Theta JC [ $R_{\theta JC}$ ] value, which is based on a JEDEC-defined 1S0P system) and will change based on environment as well as application. For more information, see these EIA/JEDEC standards:
  - JESD51-2, Integrated Circuits Thermal Test Method Environmental Conditions - Natural Convection (Still Air)
  - JESD51-3, Low Effective Thermal Conductivity Test Board for Leaded Surface Mount Packages
  - JESD51-7, High Effective Thermal Conductivity Test Board for Leaded Surface Mount Packages
  - JESD51-9, Test Boards for Area Array Surface Mount Package Thermal Measurements

Power dissipation of 2W and an ambient temperature of 70°C is assumed.

- (3) According to the JEDEC EIA/JESD 51 document
- (4) Modeled using the JEDEC 2s2p thermal test board with 36 thermal vias

<b>RF_ANT1 + RF_ANT2</b>					
Operation frequency range		2412		2484	MHz
Return loss			-10.0		dB
Reference input impedance			50.0		Ω

(1) Maximum transmitter power (TP) degradation of up to 30% is expected, starting from 80°C ambient temperature on MIMO operation

(2) Regulatory constraints limit TI module output power to the following:

- Channel 14 is used only in Japan; to keep the channel spectral shaping requirement, the power is limited: 14.5 dBm.
- Channels 1, 11 at OFDM legacy and HT 20-MHz rates: 12 dBm
- Channels 1, 11 at HT 40-MHz rates: 10 dBm
- Channel 7 at HT 40-MHz lower rates: 10 dBm
- Channel 5 at HT 40-MHz upper rates: 10 dBm
- All 11B rates are limited to 16 dBm to comply with the ETSI PSD 10 dBm/MHz limit.
- All OFDM rates are limited to 16.5 dBm to comply with the ETSI EIRP 20 dBm limit.
- For clarification regarding power limitation, see the [WL18xx .INI File Application Report](#).

(3) To ensure compliance with the EVM conditions specified in the PHY chapter of IEEE Std 802.11™ – 2012:

- MCS7 20 MHz channel 12 output power is 2 dB lower than the typical value.

- MCS7 20 MHz channel 8 output power is 1 dB lower than the typical value.

- (3) Numbers include XTAL frequency drift over temperature and aging.

## 7.19 Bluetooth BR and EDR Dynamic Currents

Current is measured at output power as follows: BR at 11.7dBm; EDR at 7.2dBm.

USE CASE <sup>(1) (2)</sup>	TYP	UNIT
BR voice HV3 + sniff	11.6	mA
EDR voice 2-EV3 no retransmission + sniff	5.9	mA
Sniff 1 attempt 1.28 s	178.0	$\mu$ A
EDR A2DP EDR2 (master). SBC high quality – 345 kbps	10.4	mA
EDR A2DP EDR2 (master). MP3 high quality – 192 kbps	7.5	mA
Full throughput ACL RX: RX-2DH5 <sup>(3) (4)</sup>	18.0	mA
Full throughput BR ACL TX: TX-DH5 <sup>(4)</sup>	50.0	mA
Full throughput EDR ACL TX: TX-2DH5 <sup>(4)</sup>	33.0	mA
Page scan or inquiry scan (scan interval is 1.28 s or 11.25 ms, respectively)	253.0	$\mu$ A
Page scan and inquiry scan (scan interval is 1.28 s and 2.56 s, respectively)	332.0	$\mu$ A

- (1) The role of Bluetooth in all scenarios except A2DP is slave.
- (2) CL1P5 PA is connected to  $V_{BAT}$ , 3.7V.
- (3) ACL RX has the same current in all modulations.
- (4) Full throughput assumes data transfer in one direction.

## 7.20 Bluetooth Low Energy Currents

All current measured at output power of 6.5dBm

USE CASE <sup>(1)</sup>	TYP	UNIT
Advertising, not connectable <sup>(2)</sup>	131	$\mu$ A

Connected, master role, 1.28s connect interval <sup>(4)</sup>	124	$\mu$ A
Connected, slave role, 1.28s connect interval <sup>(4)</sup>	132	$\mu$ A

- (1) CL1p% PA is connected to  $V_{BAT}$ , 3.7V.
- (2) Advertising in all three channels, 1.28s advertising interval, 15 bytes advertise data
- (3) Listening to a single frequency per window, 1.28s scan interval, 11.25ms scan window
- (4) Zero slave connection latency, empty TX and RX LL packets

## 7.21 Timing and Switching Characteristics

### 7.21.1 Power Management

#### 7.21.1.1 Block Diagram – Internal DC-DCs

The device incorporates three internal DC-DCs (switched-mode power supplies) to provide efficient internal supplies, derived from  $V_{BAT}$ .

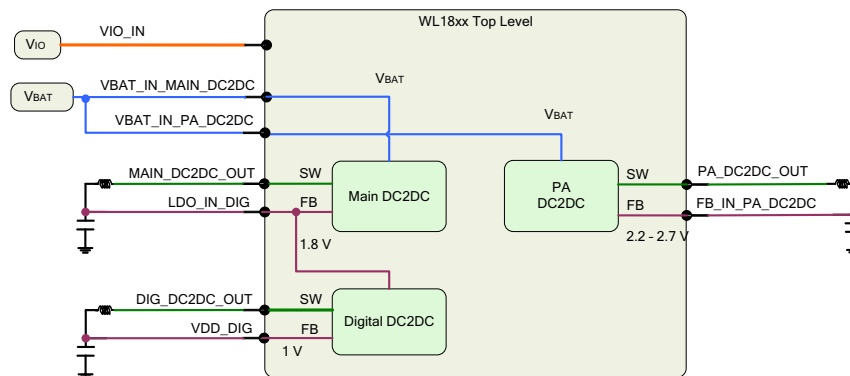

Figure 7-1. Internal DC-DCs

#### 7.21.2 Power-Up and SHUTDOWN States

The correct power-up and shutdown sequences must be followed to avoid damage to the device.

While  $V_{BAT}$  or  $V_{IO}$  or both are deasserted, no signals should be driven to the device. The only exception is the slow clock that is a failsafe I/O.

While  $V_{BAT}$ ,  $V_{IO}$ , and slow clock are fed to the device, but  $WL\_EN$  is deasserted (low), the device is in SHUTDOWN state. In SHUTDOWN state all functional blocks, internal DC-DCs, clocks, and LDOs are disabled.

To perform the correct power-up sequence, assert (high)  $WL\_EN$ . The internal DC-DCs, LDOs, and clock start to ramp and stabilize. Stable slow clock,  $V_{IO}$ , and  $V_{BAT}$  are prerequisites to the assertion of one of the enable signals.

To perform the correct shut-down sequence, deassert (low)  $WL\_EN$  while all the supplies to the device ( $V_{BAT}$ ,  $V_{IO}$ , and slow clock) are still stable and available. The supplies to the chip ( $V_{BAT}$  and  $V_{IO}$ ) can be deasserted only after both enable signals are deasserted (low).

Figure 7-2 shows the general power scheme for the module, including the power-down sequence.

- NOTE: 1. Either  $V_{BAT}$  or  $V_{IO}$  can come up first.  
 2.  $V_{BAT}$  and  $V_{IO}$  supplies and slow clock (SCLK), must be stable prior to EN being asserted and at all times. When the EN is active.  
 3. At least  $60\mu s$  is required between two successive device enables. The device is assumed to be in shutdown state during that period, meaning all enables to the device are LOW for that minimum duration.

4. EN must be deasserted at least 10µs before VBAT or VIO supply can be lowered (order of supply turn off after EN shutdown is immaterial).
5. EXT\_32K - Failsafe I/O

### 7.21.6 WLAN SDIO Transport Layer

The SDIO is the host interface for WLAN. The interface between the host and the WL18xx module uses an SDIO interface and supports a maximum clock rate of 50 MHz.

The device SDIO also supports the following features of the SDIO V3 specification:

- 4-bit data bus
- Synchronous and asynchronous in-band interrupt
- Default and high-speed (HS, 50 MHz) timing
- Sleep and wake commands

#### 7.21.6.1 SDIO Timing Specifications

### 7.21.7 HCI UART Shared-Transport Layers for All Functional Blocks (Except WLAN)

The device includes a UART module dedicated to the Bluetooth shared-transport, host controller interface (HCI) transport layer. The HCI transports commands, events, and ACL between the Bluetooth device and its host using HCI data packets as a shared transport for all functional blocks except WLAN. [Table 7-3](#) lists the transport mechanism for WLAN and bluetooth audio.

**Table 7-3. Transport Mechanism**

WLAN	SHARED HCI FOR ALL FUNCTIONAL BLOCKS EXCEPT WLAN	Bluetooth VOICE-AUDIO
WLAN HS SDIO	Over UART	Bluetooth PCM

The HCI UART supports most baud rates (including all PC rates) for all fast-clock frequencies up to a maximum of 4 Mbps. After power up, the baud rate is set for 115.2 Kbps, regardless of the fast-clock frequency. The baud rate can then be changed using a VS command. The device responds with a Command Complete Event (still at 115.2 Kbps), after which the baud rate change occurs.

HCI hardware includes the following features:

- Receiver detection of break, idle, framing, FIFO overflow, and parity error conditions
- Receiver-transmitter underflow detection
- CTS, RTS hardware flow control
- 4 wire (H4)

[Table 7-4](#) lists the UART default settings.

**Table 7-4. UART Default Setting**

PARAMETER	VALUE
Bit rate	115.2 Kbps
Data length	8 bits
Stop bit	1
Parity	None

#### 7.21.7.1 UART 4-Wire Interface – H4

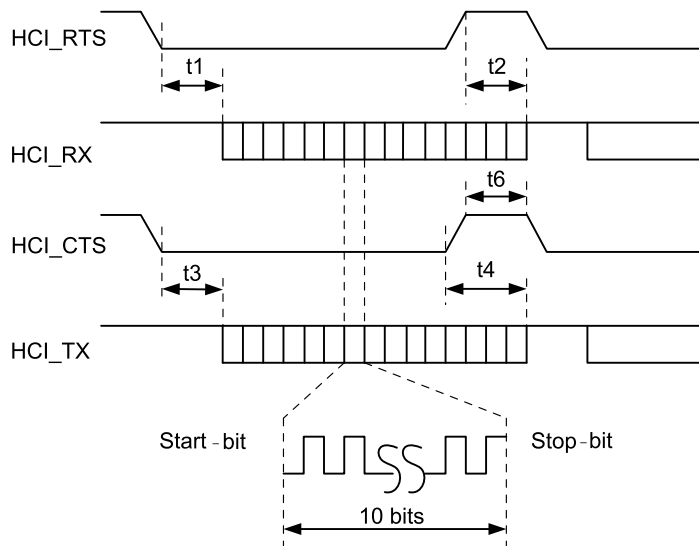

The interface includes four signals:

- TXD
- RXD
- CTS
- RTS

Flow control between the host and the device is byte-wise by hardware.

When the UART RX buffer of the device passes the flow-control threshold, the buffer sets the UART\_RTS signal high to stop transmission from the host. When the UART\_CTS signal is set high, the device stops transmitting on the interface. If HCI\_CTS is set high in the middle of transmitting a byte, the device finishes transmitting the byte and stops the transmission.

Figure 7-10 shows the UART timing.

**Figure 7-10. UART Timing Diagram**

Table 7-5 lists the UART timing characteristics.

**Table 7-5. UART Timing Characteristics**

(1) The system design power scheme must comply with both peak and average TX bursts.

(2) Peak current  $V_{BAT}$  can hit 850mA during device calibration.

- At wakeup, the WiLink 8 module performs the entire calibration sequence at the center of the 2.4GHz band.
- After a link is established, calibration is performed periodically (every 5 minutes) on the specific channel tuned.
- The maximum VBAT value is based on peak calibration consumption with a 30% margin.

## 8.1 WLAN Features

The device supports the following WLAN features:

- Integrated 2.4GHz power amplifiers (PAs) for a complete WLAN solution
- Baseband processor: IEEE Std 802.11a, 802.11b/g, and IEEE Std 802.11n data rates with 20MHz or 40MHz SISO and 20MHz MIMO
- Fully calibrated system (production calibration not required)
- Medium access controller (MAC)
  - Embedded Arm® central processing unit (CPU)
  - Hardware-based encryption-decryption using 64-, 128-, and 256-bit WEP, TKIP, or AES keys
  - Requirements for Wi-Fi-protected access (WPA and WPA2.0) and IEEE Std 802.11i (includes hardware-accelerated Advanced Encryption Standard [AES])
- New advanced coexistence scheme with Bluetooth and Bluetooth Low Energy wireless technology
- 2.4GHz and 5GHz radio
  - Internal LNA and PA
  - IEEE Std 802.11a, 802.11b, 802.11g, and 802.11n
- 4-bit SDIO host interface, including high speed (HS) and V3 modes

## 8.2 Bluetooth Features

The device supports the following Bluetooth features:

- Bluetooth 5.1 secure connection as well as CSA2
- Concurrent operation and built-in coexisting and prioritization handling of Bluetooth and Bluetooth Low Energy wireless technology, audio processing, and WLAN
- Dedicated audio processor supporting on-chip SBC encoding + A2DP
  - Assisted A2DP (A3DP): SBC encoding implemented internally
  - Assisted WB-speech (AWBS): modified SBC codec implemented internally

### 8.3 Bluetooth Low Energy Features

The device supports the following Bluetooth Low Energy features:

- Bluetooth 5.1 low-energy dual-mode standard
- All roles and role combinations, mandatory as well as optional
- Up to 10 low-energy connections
- Independent low energy buffering allowing multiple connections with no effect on BR-EDR performance

### 8.4 Device Certification

The WL18MODGI modules from TI (test grades 07 and 37) are certified for FCC, IC, ETSI/CE, and Japan MIC. TI customers who build products based on the WL18MODGI device from TI can save on testing costs and time per product family. [Table 8-4](#) shows the certification list for the WL18MODGI module.

**Table 8-4. Device Certification**

#### 8.4.1 FCC Certification and Statement

The WL18MODGI modules from TI are certified for the FCC as a single-modular transmitter. The modules are FCC-certified radio modules that carry a modular grant. Users are cautioned that changes or modifications not expressly approved by the party responsible for compliance could void the authority of the user to operate the equipment.

This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation of the device.

**CAUTION**

**FCC RF Radiation Exposure Statement**

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. End users must follow the specific operating instructions to satisfy RF exposure limits. This transmitter must not be colocated or operate with any other antenna or transmitter.

#### 8.4.2 Innovation, Science, and Economic Development Canada (ISED)

The WL18MODGI modules from TI are certified for IC as a single-modular transmitter. The WL18MODGI modules from TI meet IC modular approval and labeling requirements. The IC follows the same testing and rules as the FCC regarding certified modules in authorized equipment. This device complies with Industry Canada licence-exempt RSS standards.

Operation is subject to the following two conditions:

- This device may not cause interference.

- This device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence.

L'exploitation est autorisée aux deux conditions suivantes:

- L'appareil ne doit pas produire de brouillage.
- L'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

#### **CAUTION**

##### **IC RF Radiation Exposure Statement:**

To comply with IC RF exposure requirements, this device and its antenna must not be colocated or operating in conjunction with any other antenna or transmitter.

Pour se conformer aux exigences de conformité RF canadienne l'exposition, cet appareil et son antenne ne doivent pas être co-localisés ou fonctionnant en conjonction avec une autre antenne or transmitter.

#### **8.4.3 ETSI/CE**

The WL18MODGB modules conform to the EU Radio Equipment Directive. For further details, see the full text of the EU Declaration of Conformity for the [WL18MODGI \(test grade 07\)](#) and [WL18MODGI \(test grade 37\)](#) devices.

#### **8.4.4 MIC Certification**

The WL18MODGI modules from TI are MIC certified against article 49-20 and the relevant articles of the Ordinance Regulating Radio Equipment. Operation is subject to the following condition:

- The host system does not contain a wireless wide area network (WWAN) device.

## 8.5 Module Markings

Figure 8-2 shows the markings for the TI WiLink 8 module.

## 8.6 Test Grades

To minimize delivery time, TI may ship the device ordered or an equivalent device currently available that contains at least the functions of the part ordered. From all aspects, this device behaves exactly the same as the part ordered. For example, if a customer orders device WL1807MOD, the part shipped can be marked with a test grade of 37, 07 (see [Table 8-6](#)).

**Table 8-6. Test Grade Markings for Model WL18MODGI**

MARK	WLAN 2.4 and 5 GHz	Bluetooth

## **8.7 End Product Labeling**

These modules are designed to comply with the FCC single modular FCC grant, FCC ID: Z64-WL18DBMOD. The host system using this module must display a visible label indicating the following text:

Contains FCC ID: Z64-WL18DBMOD

These modules are designed to comply with the IC single modular FCC grant, IC: 451I-WL18DBMOD. The host system using this module must display a visible label indicating the following text:

Contains IC: 451I-WL18DBMOD

This module is designed to comply with the JP statement, 201-140447. The host system using this module must display a visible label indicating the following text:

Contains transmitter module with certificate number: 201-140447

## **8.8 Manual Information to the End User**

The OEM integrator must be aware of not providing information to the end user regarding how to install or remove this RF module in the user's manual of the end product that integrates this module. The end user's manual must include all required regulatory information and warnings as shown in this manual.

## 9 Applications, Implementation, and Layout

### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

### 9.1 Application Information

### 9.1.2 Design Recommendations

This section describes the layout recommendations for the WL1837 module, RF trace, and antenna.

Table 9-2 summarizes the layout recommendations.

**Table 9-2. Layout Recommendations Summary**

ITEM	DESCRIPTION
<b>Thermal</b>	
1	The proximity of ground vias must be close to the pad.
2	Signal traces must not be run underneath the module on the layer where the module is mounted.
3	Have a complete ground pour in layer 2 for thermal dissipation.
4	Have a solid ground plane and ground vias under the module for stable system and thermal dissipation.
5	Increase the ground pour in the first layer and have all of the traces from the first layer on the inner layers, if possible.
6	Signal traces can be run on a third layer under the solid ground layer, which is below the module mounting layer.
<b>RF Trace and Antenna Routing</b>	
7	The RF trace antenna feed must be as short as possible beyond the ground reference. At this point, the trace starts to radiate.
8	The RF trace bends must be gradual with an approximate maximum bend of 45° with trace mitered. RF traces must not have sharp corners.
9	RF traces must have via stitching on the ground plane beside the RF trace on both sides.
10	RF traces must have constant impedance (microstrip transmission line).
11	For best results, the RF trace ground layer must be the ground layer immediately below the RF trace. The ground layer must be solid.
12	There must be no traces or ground under the antenna section.
13	RF traces must be as short as possible. The antenna, RF traces, and modules must be on the edge of the PCB product. The proximity of the antenna to the enclosure and the enclosure material must also be considered.

**Table 9-2. Layout Recommendations Summary (continued)**

ITEM	DESCRIPTION
<b>Supply and Interface</b>	
14	The power trace for $V_{BAT}$ must be at least 40-mil wide.
15	The 1.8-V trace must be at least 18-mil wide.
16	Make VBAT traces as wide as possible to ensure reduced inductance and trace resistance.
17	If possible, shield $V_{BAT}$ traces with ground above, below, and beside the traces.
18	SDIO signals traces (CLK, CMD, D0, D1, D2, and D3) must be routed in parallel to each other and as short as possible (less than 12 cm). In addition, every trace length must be the same as the others. There should be enough space between traces – greater than 1.5 times the trace width or ground – to ensure signal quality, especially for the SDIO_CLK trace. Remember to keep these traces away from the other digital or analog signal traces. TI recommends adding ground shielding around these buses.
19	SDIO and digital clock signals are a source of noise. Keep the traces of these signals as short as possible. If possible, maintain a clearance around them.

**9.1.3 RF Trace and Antenna Layout Recommendations**

Figure 9-2 shows the location of the antenna on the WL1837MODCOM8I board as well as the RF trace routing from the WL1837 module (TI reference design). The Pulse multilayer antennas are mounted on the board with a specific layout and matching circuit for the radiation test conducted in FCC, CE, and IC certifications.

**Figure 9-2. Location of Antenna and RF Trace Routing on the WL1837MODCOM8I Board**

Follow these RF trace routing recommendations:

- RF traces must have 50Ω impedance.
- RF traces must not have sharp corners.
- RF traces must have via stitching on the ground plane beside the RF trace on both sides.
- RF traces must be as short as possible. The antenna, RF traces, and module must be on the edge of the PCB product in considering the product enclosure material and proximity.

### 9.1.4 Module Layout Recommendations

Figure 9-3 and Figure 9-4 show layer 1 and layer 2 of the TI module layout.

Figure 9-3. TI Module Layout: Layer 1

Figure 9-4. TI Module Layout: Layer 2 (Solid GND)

Follow these module layout recommendations:

- Ensure a solid ground plane and ground vias under the module for a stable system and thermal dissipation.
- Do not run signal traces under the module on a layer where the module is mounted.
- Signal traces can be run on a third layer under the solid ground layer and beneath the module mounting.
- Run the host interfaces with ground on the adjacent layer to improve the return path.
- TI recommends routing the signals as short as possible to the host.

### 9.1.5 Thermal Board Recommendations

The TI module uses  $\mu$ vias for layers 1 through 6 with full copper filling, providing heat flow all the way to the module ground pads.

TI recommends using one big ground pad under the module with vias all the way to connect the pad to all ground layers (see [Figure 9-5](#)).

**Figure 9-5. Block of Ground Pads on Bottom Side of Package**

[Figure 9-6](#) shows via array patterns, which are applied wherever possible to connect all of the layers to the TI module central or main ground pads.

**Figure 9-6. Via Array Patterns**

### 9.1.6 Baking and SMT Recommendations

#### 9.1.6.1 Baking Recommendations

Follow these baking guidelines for the WiLink 8 module:

- Follow MSL level 3 to perform the baking process.
- After the bag is open, devices subjected to reflow solder or other high-temperature processes must be mounted within 168 hours of factory conditions (< 30°C/60% RH) or stored at <10% RH.
- If the humidity indicator card reads >10%, devices require baking before they are mounted.
- If baking is required, bake devices for 8 hours at 125°C.

#### 9.1.6.2 SMT Recommendations

Figure 9-7 shows the recommended reflow profile for the WiLink 8 module.

**Figure 9-7. Reflow Profile for the WiLink 8 Module**

Table 9-3 lists the temperature values for the profile shown in Figure 9-7.

**Table 9-3. Temperature Values for Reflow Profile**

ITEM	TEMPERATURE (°C)	TIME (s)
Preheat	D1 to approximately D2: 140 to 200	T1: 80 to approximately 120
Soldering	D2: 220	T2: 60 ±10
Peak temperature	D3: 250 maximum	T3: 10

#### Note

TI does not recommend the use of conformal coating or similar material on the WiLink 8 module. This coating can lead to localized stress on the WCSP solder connections inside the module and impact the device reliability. Care should be taken during module assembly process to the final PCB to avoid the presence of foreign material inside the module.

## 10 Device and Documentation Support

### 10.1 Device Support

#### 10.1.1 Third-Party Products Disclaimer

TI'S PUBLICATION OF INFORMATION REGARDING THIRD-PARTY PRODUCTS OR SERVICES DOES NOT CONSTITUTE AN ENDORSEMENT REGARDING THE SUITABILITY OF SUCH PRODUCTS OR SERVICES OR A WARRANTY, REPRESENTATION OR ENDORSEMENT OF SUCH PRODUCTS OR SERVICES, EITHER ALONE OR IN COMBINATION WITH ANY TI PRODUCT OR SERVICE.

#### 10.1.2 Development Support

TI offers an extensive line of development tools, including tools to evaluate the performance of the processors, generate code, develop algorithm implementations, and fully integrate and debug software and hardware modules.

##### 10.1.2.1 Tools and Software

For a complete listing of development-support tools, visit the Texas Instruments [WL18xx Wiki](#). For information on pricing and availability, contact the nearest TI field sales office or authorized distributor.

#### Design Kits and Evaluation Modules

##### [AM335x EVM \(TMDXEVM3358\)](#)

The AM335x EVM enables developers to immediately evaluate the AM335x processor family (AM3351, AM3352, AM3354, AM3356, and AM3358) and begin building applications, such as portable navigation, portable gaming, and home and building automation.

##### [AM437x Evaluation Module \(TMDSEVM437X\)](#)

The AM437x EVM enables developers to immediately evaluate the AM437x processor family (AM4376, AM4377, AM4378, and AM437) and begin building applications, such as portable navigation, patient monitoring, home and building automation, barcode scanners, and portable data terminals.

##### [BeagleBone Black Development Board \(BEAGLEBK\)](#)

BeagleBone Black is a low-cost, open source, community-supported development platform for Arm Cortex-A8 processor developers and hobbyists. Boot Linux in under 10 seconds and get started on Sitara™ AM335x Arm Cortex-A8 processor development in less than 5 minutes using just a single USB cable.

##### [WiLink 8 Module 2.4 GHz Wi-Fi + Bluetooth COM8 EVM \(WL1835MODCOM8B\)](#)

The WL1835MODCOM8 Kit for Sitara EVMs easily enables customers to add Wi-Fi and Bluetooth technology (WL183x module only) to embedded applications based on TI's Sitara microprocessors. TI's WiLink 8 Wi-Fi + Bluetooth modules are precertified and offer high throughput and extended range along with Wi-Fi and Bluetooth coexistence (WL183x modules only) in a power-optimized design. Drivers for the Linux and Android high-level operating systems (HLOSs) are available free of charge from TI for the Sitara AM335x microprocessor (Linux and Android version restrictions apply).

Note: The WL1835MODCOM8 EVM is one of the two evaluation boards for the TI WiLink 8 combo module family. For designs requiring performance in the 5-GHz band and extended temperature range, see the [WL1837MODCOM8i EVM](#).

##### [WL18XXCOM82SDMMC Adapter Board](#)

The WiLink SDIO board is an SDMMC adapter board and an easy-to-use connector between the WiLink COM8 EVM (WL1837MODCOM8i and WL1835MODCOM8B) and a generic SD/MMC card slot on a host processor EVM. The adapter card enables the WiLink Wi-Fi module to operate over SDIO and provides a UART connection for Bluetooth technology over an FPC connector or wire cables. In addition, the adapter is a standalone evaluation platform using TI wireless PC debug tools for any WiLink module or chip

solution with a PCB 100-pin edge connector. This board is designed for use with various platforms such as the TI Sitara AM335 and AM437.

## TI Reference Designs

Find reference designs leveraging the best in TI technology to solve your system-level challenges.

### TI WiLink 8 Wi-Fi/Bluetooth/Bluetooth Smart Audio Multi-Room Cape Reference Design (TIDC-WL1837MOD-AUDIO-MULTIROOM-CAPE)

The TI WiLink 8 [WL1837MOD](#) audio cape is a wireless multi-room audio reference design used with [BeagleBone Black](#) featuring the TI Sitara (AM335x). The WLAN capability of the WiLink 8 device to capture and register the precise arrival time of the connected AP beacon is used to achieve ultra-precise synchronization between multiple connected audio devices. The WiLink 8 module (WL1837MOD) offers an integrated Wi-Fi/Bluetooth/Bluetooth Smart solution featuring 2.4GHz MIMO and antenna diversity on the 5GHz band. The WiLink 8 module offers a best-in-class audio solution featuring multi-room, Airplay® receiver, full audio stack streaming, support for online music services, and much more. This reference design enables customers to design their own audio boards with Wi-Fi/Bluetooth/Bluetooth Smart connectivity from our WiLink 8 module (WL1837MOD) and evaluate audio multi-room software.

### 2.4-GHz Wi-Fi + Bluetooth Certified Antenna Design on WiLink 1835 Module (TIDC-WL1835MODCOM8B)

The WiLink 1835 Module Antenna reference design combines the functionalities of the WiLink 8 module with a built-in antenna on a single board, implementing the module in the way the module is certified. Customers can thus evaluate the performance of the module through embedded applications, such as home automation and the Internet of Things that make use of both Wi-Fi and Bluetooth/Bluetooth Low Energy functionalities found on the WiLink 1835 module. This antenna design is the same layout used during module certification, allowing customers to avoid repeated certification when creating their specific applications.

### Smart Home and Energy Gateway Reference Design (TIEP-SMART-ENERGY-GATEWAY)

The Smart Home and Energy Gateway reference design provides an example implementation for measurement, management, and communication of energy systems for smart homes and buildings. This example design is a bridge between different communication interfaces, such as Wi-Fi, Ethernet, Zigbee, or Bluetooth, that are commonly found in residential and commercial buildings. Because objects in homes and buildings are becoming more and more connected and no single RF standard dominates the market, the gateway design must be flexible to accommodate different RF standards. This example gateway addresses the problem by supporting existing legacy RF standards (Wi-Fi, Bluetooth) and newer RF standards ( Zigbee® and BLE).

### Streaming Audio Reference Design (TIDEP0009)

The TIDEP0009 Streaming Audio reference design minimizes design time for customers by offering small form factor hardware and major software components, including streaming protocols and Internet radio services. With this reference design, TI offers a quick and easy transition path to the AM335x and WiLink 8 platform solution. This proven combination solution provides key advantages in this market category that help bring your products to the next level.

## Software

### WiLink 8 Wi-Fi Driver for Linux OS (WILINK8-WIFI-NLCP)

The NLCP package contains the install package, pre-compiled object, and source of the TI Linux Open-Source Wi-Fi image to easily upgrade the default LINUX EZSDK release with the TI WiLink family NLCP Wi-Fi driver. The software is built with Linaro GCC 4.7 and can be added to Linux Software Development Kits (SDKs) that use a similar toolchain on other platforms.

[Android Development Kit for Sitara Microprocessors \(ANDROIDSDK-SITARA\)](#)

Although originally designed for mobile handsets, the Android Operating System offers designers of embedded applications the ability to easily add a high-level OS to their product. Developed in association with Google, Android delivers a complete operating system that is ready for integration and production today.

[Linux EZ Software Development Kit \(EZSDK\) for Sitara Processors \(LINUXEZSDK-SITARA\)](#)

Linux SDKs provide Sitara developers with an easy setup and quick out-of-box experience that is specific to and highlights the features of TI's Arm processors. Launching demos, benchmarks, and applications is a snap with the included graphical user interface. The Sitara Linux SDK also allows developers to quickly start development of their own applications and easily add them to the application launcher, which can be customized by the developer.

[TI Dual-Mode Bluetooth Stack \(TIBLUETOOTHSTACK-SDK\)](#)

TI's dual-mode Bluetooth stack enables Bluetooth + Bluetooth Low Energy and is comprised of single-mode and dual-mode offerings implementing the Bluetooth 4.0 specification. The Bluetooth stack is fully Bluetooth Special Interest Group (SIG) qualified, certified, and royalty-free, provides simple command line sample applications to speed development, and has MFI capability on request.

[Bluetooth Service Pack for WL18xx \(WL18XX-BT-SP\)](#)

The Bluetooth service pack is composed of the following four files: BTS file (TIInit\_11.8.32.bts), ILI file (TIInit\_11.8.32.ili), XML (TIInit\_11.8.32.xml), Release Notes Document, and License Agreement Note.

[TI Bluetooth Linux Add-On for AM335x EVM, AM437x EVM and BeagleBone with WL18xx and CC256x \(TI-BT-STACK-LINUX-ADDON\)](#)

The Bluetooth Linux Add-On package contains the install package, pre-compiled object, and source of the TI Bluetooth Stack and Platform Manager to easily upgrade the default LINUX EZSDK Binary on a AM437x EVM, AM335x EVM, or BeagleBone. The software is built with Linaro GCC 4.7 and can be added to Linux SDKs that use a similar toolchain on other platforms. The Bluetooth stack is fully qualified (QDID 69886 and QDID 69887), provides simple command line sample applications to speed development, and has MFI capability on request.

[WiLink Wireless Tools for WL18XX Modules \(WILINK-BT\\_WIFI-WIRELESS\\_TOOLS\)](#)

The WiLink Wireless Tools package includes the following applications: WLAN Real-Time Tuning Tool (RTTT), Bluetooth Logger, WLAN gLogger, Link Quality Monitor (LQM), HCI Tester Tool (BTSout, BTSTransform, and ScriptPad). The applications provide all of the capabilities required to debug and monitor WiLink WLAN/Bluetooth/Bluetooth Low Energy firmware with a host, perform RF validation tests, run pretest for regulatory certification testing, and debug hardware and software platform integration issues.

**Development Tools**

[WiLink 8 Proprietary Wi-Fi Driver – QNX, WinCE, Nucleus RTOS Baseline \(WILINK8-WIFI-WAPI-MCP8, WILINK8-WIFI-MCP8, WILINK8-WIFI-SIGMA-MCP8\)](#)

The MCP package contains the install package, precompiled object, and source of the proprietary Wi-Fi driver - QNX, Nucleus, WinCE, as well as ThreadX, FreeRTOS, µC, MQX, RTX, and uITRON RTOS baseline image to easily integrate the TI WiLink Wi-Fi drivers. The integration is supported through third-party vendors. The WAPI package provides the WPA Supplicant patch to support WAPI security protocol. The Sigma package provides the required APIs for WL8 code to support automated Sigma certification testing.

**10.1.3 Device Support Nomenclature**

To designate the stages in the product development cycle, TI assigns prefixes to the part numbers. These prefixes represent evolutionary stages of product development from engineering prototypes through fully qualified production devices.

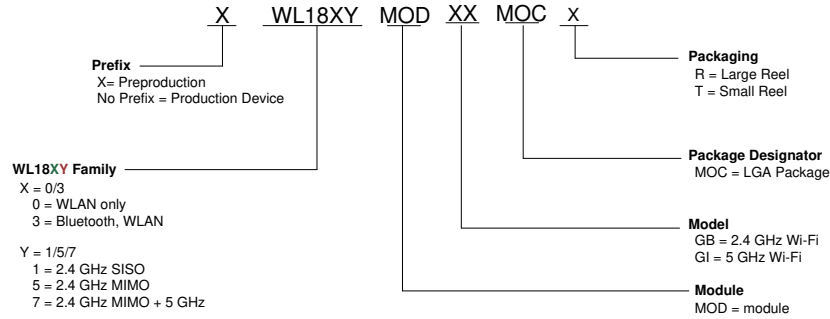

Figure 10-1. Device Nomenclature

X Experimental, preproduction, sample or prototype device. Device may not meet all product qualification conditions and may not fully comply with TI specifications. Experimental/Prototype devices are shipped against the following disclaimer: "This product is still in development and is intended for internal evaluation purposes." Notwithstanding any provision to the contrary, TI makes no warranty expressed, implied, or statutory, including any implied warranty of merchantability of fitness for a specific purpose, of this device.

null Device is qualified and released to production. TI's standard warranty applies to production devices.

## 10.2 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

## 10.3 Trademarks

WiLink™ and TI E2E™ are trademarks of Texas Instruments.

## 10.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

## 11 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

### Changes from November 6, 2023 to January 1, 2025 (from Revision K (November 2023) to Revision L (May 2025))

	<b>Page</b>
• Updated functional block diagram and added certification information.....	2
• Changed Bluetooth LE sensitivity typical value from –93.2.....	18
• Added "(TYP)" to Specification column in WLAN Performance Parameters.....	28
• Changed calibration performance from 5 seconds to 5 minutes <i>WLAN Performance Parameters</i> .....	28

### Changes from April 26, 2021 to November 6, 2023 (from Revision J (April 2021) to Revision K (November 2023))

• Updated functional block diagram and added certification information.....	2

## 12 Mechanical, Packaging, and Orderable Information

### 12.1 TI Module Mechanical Outline

Figure 12-1 shows the mechanical outline for the device.

**Figure 12-1. TI Module Mechanical Outline**

Table 12-1 lists the dimensions for the mechanical outline of the device.

#### Note

The TI module weighs 0.684 g typical.

## 12.2.2 Packing Specification

### 12.2.2.1 Reel Box

The reel is packed in a moisture barrier bag fastened by heat-sealing. Each moisture-barrier bag is packed into a reel box, as shown in [Figure 12-4](#).

**Figure 12-4. Reel Box**

The reel box is made of corrugated fiberboard.

### 12.2.2.2 Shipping Box

[Figure 12-5](#) shows a typical shipping box. If the shipping box has excess space, filler (such as cushion) is added.

#### Note

The size of the shipping box may vary depending on the number of reel boxes packed.

**Figure 12-5. Shipping Box**

The shipping box is made of corrugated fiberboard.

### 12.3 Packaging Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PRE\_PROD** Unannounced device, not in production, not available for mass market, nor on the web, samples not available.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) RoHS Compliance: This product has an RoHS exemption for one or more subcomponent(s). The product is otherwise considered Pb-Free (RoHS compatible) as defined above.

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

# EXAMPLE BOARD LAYOUT

QFM - 2.0 mm max height

MOC0100A

QUAD FLAT MODULE

NOTES: (continued)

4. This package is designed to be soldered to thermal pads on the board. For more information, see Texas Instruments literature number SLUA271 ([www.ti.com/lit/sluea271](http://www.ti.com/lit/sluea271)).
5. Solder mask tolerances between and around signal pads can vary based on board fabrication site.
6. Vias are optional depending on application, refer to device data sheet. If any vias are implemented, it is recommended that vias under paste be filled, plugged or tented.
